Release: 3

AHCPMG510 Develop a pest survey strategy

Modification History

Release	Comments
Release 3	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.
Release 2	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 2.0.
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 1.0.

Application

This unit of competency describes the skills and knowledge required to develop a plant pest survey strategy to determine the presence, distribution and prevalence of pest plants, vertebrates and/or invertebrates. The work may be conducted as part of an emergency response to an incursion or as part of routine surveillance and must be conducted in accordance with established standards and protocols.

The unit applies to individuals who undertake a role within a pest incursion response and take personal responsibility and exercise autonomy in undertaking complex work. They are accountable for the work of others within broad parameters and analyse information and exercise judgement to complete a range of advanced skilled activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Pest Management (PMG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Obtain and analyse biological information for survey design	1.1 Identify the biological and dispersal characteristics of the pest 1.2 Determine impact of climate on reproduction rates and the predicted distribution of the pest 1.3 Identify the geographical distribution of the host 1.4 Analyse information to determine priority areas to be surveyed
2. Develop survey methodology	2.1 Determine particular type of survey to be designed according to phase of incursion 2.2 Determine field data collection methodology in consultation with technical experts 2.3 Incorporate quality assurance standards, legislative requirements and codes of practice into survey methodology and documentation 2.4 Select diagnostic tests for use in confirming pest presence in samples 2.5 Include procedure for sustainability and biosecurity in survey plan 2.6 Determine review processes to evaluate survey program 2.7 Develop instructions for survey teams
3. Determine the resources and obtain approvals for survey design	3.1 Determine and document resources required for survey activities in consultation with technical experts 3.2 Document survey design according to protocols, industry standards and workplace health and safety policies 3.3 Submit survey design to authorising agency for approval

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Organise, evaluate and analyse biological data, maps and charts to verify pest characteristics and dispersal
Writing	<ul style="list-style-type: none"> Prepare detailed procedural texts defining the requirements and purpose of pest survey strategy for stakeholders, taking into

Skill	Description
	account the needs of a culturally and linguistically diverse workforce
