AVI Aviation Training Package

Release: 5.0

CONTENTS

AVI Aviation Training Package.....	23
AVI10119 Certificate I in Aviation (Foundation Skills)	24
AVI20118 Certificate II in Transport Security Protection.....	26
AVI20119 Certificate II in Aviation (Flight Operations -Cargo Services).....	31
AVI20219 Certificate II in Aviation (Ground Operations and Service)	34
AVI30119 Certificate III in Aviation (Aerodrome Operations).....	38
AVI30219 Certificate III in Aviation (Cabin Crew).....	41
AVI30319 Certificate III in Aviation (Ground Operations and Service).....	44
AVI30419 Certificate III in Aviation (Remote Pilot).....	49
AVI30519 Certificate III in Aviation (Rescue Crew Officer)	52
AVI40119 Certificate IV in Aviation (Air Crew Officer)	55
AVI40219 Certificate IV in Aviation (Aviation Supervision)	58
AVI40319 Certificate IV in Aviation (Flight Operations Supervision).....	63
AVI40419 Certificate IV in Aviation (Remote Pilot-Beyond Visual Line of Sight).....	65
AVI50115 Diploma of Aviation (Air Traffic Control)	67
AVI50119 Diploma of Aviation (Aviation Management)	70
AVI50219 Diploma of Aviation (Commercial Pilot Licence - Aeroplane).....	73
AVI50319 Diploma of Aviation (Commercial Pilot Licence - Helicopter)	76
AVI50419 Diploma of Aviation (Flight Instructor)	79
AVI50519 Diploma of Aviation (Instrument Rating)	82
AVI60119 Advanced Diploma of Aviation (Chief Flight Instructor)	85
AVI60219 Advanced Diploma of Aviation (Pilot in Command)	88
AVIB0001 Manage and carry out pre- and post-flight cabin checks.....	90
Assessment Requirements for AVIB0001 Manage and carry out pre- and post-flight cabin checks	93
AVIB0002 Inspect and report on aerodrome serviceability	96
Assessment Requirements for AVIB0002 Inspect and report on aerodrome serviceability.....	99
AVIB0003 Inspect and report on serviceability of aerodrome lighting systems	104
Assessment Requirements for AVIB0003 Inspect and report on serviceability of aerodrome lighting systems.....	107
AVIB0004 Inspect and report on obstacle limitation surfaces.....	112
Assessment Requirements for AVIB0004 Inspect and report on obstacle limitation surfaces.....	115
AVIC0001 Drive on the airside	120
Assessment Requirements for AVIC0001 Drive on the airside	122
AVIC4002 Administer airside driving	124
Assessment Requirements for AVIC4002 Administer airside driving.....	127
AVID0003 Package dangerous goods for air transport.....	130
Assessment Requirements for AVID0003 Package dangerous goods for air transport	133
AVID0004 Conduct baggage handling operations	135
Assessment Requirements for AVID0004 Conduct baggage handling operations	138
AVID0005 Accept dangerous goods for air transport.....	141
Assessment Requirements for AVID0005 Accept dangerous goods for air transport.....	144
AVID0006 Prepare freight for flight.....	147
Assessment Requirements for AVID0006 Prepare freight for flight	150
AVID0007 Conduct aviation freight weighing operations	154
Assessment Requirements for AVID0007 Conduct aviation freight weighing operations.....	157
AVID0008 Accept freight for air transport.....	161
Assessment Requirements for AVID0008 Accept freight for air transport	164

AVID0009 Load and secure aviation freight and baggage	168
Assessment Requirements for AVID0009 Load and secure aviation freight and baggage	171
AVID0010 Unload aviation freight and baggage.....	175
Assessment Requirements for AVID0010 Unload aviation freight and baggage	178
AVIE0002 Maintain airspace interactions in remote pilot aircraft systems BVLOS operations	182
Assessment Requirements for AVIE0002 Maintain airspace interactions in remote pilot aircraft systems BVLOS operations	185
AVIE0003 Operate aeronautical radio	189
Assessment Requirements for AVIE0003 Operate aeronautical radio	191
AVIE0004 Conduct radio procedures in an aviation operational environment.....	194
Assessment Requirements for AVIE0004 Conduct radio procedures in an aviation operational environment.....	197
AVIE0005 Complete a Notice to Airmen (NOTAM).....	200
Assessment Requirements for AVIE0005 Complete a Notice to Airmen (NOTAM).....	202
AVIE0006 Maintain aircraft radio communications.....	206
Assessment Requirements for AVIE0006 Maintain aircraft radio communications	209
AVIE5002 Apply air traffic control communication procedures and services.....	213
Assessment Requirements for AVIE5002 Apply air traffic control communication procedures and services	217
AVIF0015 Apply awareness of dangerous goods and hazardous substances in the transport security environment.....	220
Assessment Requirements for AVIF0015 Apply awareness of dangerous goods and hazardous substances in the transport security environment.....	223
AVIF0016 Manage network data links	225
Assessment Requirements for AVIF0016 Manage network data links.....	228
AVIF0017 Develop a risk management plan for beyond visual line of sight operations ..	233
Assessment Requirements for AVIF0017 Develop a risk management plan for beyond visual line of sight operations	236
AVIF0018 Manage risks with unmanned aerial systems (UAS) beyond visual line of sight (BVLOS).....	239
Assessment Requirements for AVIF0018 Manage risks with unmanned aerial systems (UAS) beyond visual line of sight (BVLOS).....	242
AVIF0019 Implement complex human factors in remote pilot aircraft systems beyond visual line of sight (BVLOS).....	246
Assessment Requirements for AVIF0019 Implement complex human factors in remote pilot aircraft systems beyond visual line of sight (BVLOS)	249
AVIF0020 Manage human factors and situational awareness in an aviation operational environment.....	252
Assessment Requirements for AVIF0020 Manage human factors and situational awareness in an aviation operational environment	256
AVIF0021 Manage human factors in remote pilot aircraft systems operations.....	259
Assessment Requirements for AVIF0021 Manage human factors in remote pilot aircraft systems operations	263
AVIF0022 Maintain work health and safety procedures in remote pilot aircraft systems	267
Assessment Requirements for AVIF0022 Maintain work health and safety procedures in remote pilot aircraft systems.....	270
AVIF0023 Apply aircraft safety procedures	273
Assessment Requirements for AVIF0023 Apply aircraft safety procedures.....	276
AVIF0024 Provide first aid in an aviation environment	280
Assessment Requirements for AVIF0024 Provide first aid in an aviation environment ..	283
AVIF0025 Manage human factors in flight dispatch operations	287

Assessment Requirements for AVIF0025 Manage human factors in flight dispatch operations292

AVIF0026 Implement aviation risk management processes.....297

Assessment Requirements for AVIF0026 Implement aviation risk management processes300

AVIF0027 Implement aviation fatigue risk management processes303

Assessment Requirements for AVIF0027 Implement aviation fatigue risk management processes.....306

AVIF0028 Manage aviation risk.....309

Assessment Requirements for AVIF0028 Manage aviation risk.....312

AVIF0029 Implement threat and error management strategies.....316

Assessment Requirements for AVIF0029 Implement threat and error management strategies.....319

AVIF0030 Manage safe flight operations322

Assessment Requirements for AVIF0030 Manage safe flight operations325

AVIF0031 Manage threats and errors as pilot in command329

Assessment Requirements for AVIF0031 Manage threats and errors as pilot in command333

AVIF0032 Manage human factors as pilot in command336

Assessment Requirements for AVIF0032 Manage human factors as pilot in command..339

AVIF0033 Manage aircraft passengers and cargo342

Assessment Requirements for AVIF0033 Manage aircraft passengers and cargo.....345

AVIF0034 Apply aviation work health and safety procedures348

Assessment Requirements for AVIF0034 Apply aviation work health and safety procedures351

AVIF0035 Manage human factors in aviation operations.....354

Assessment Requirements for AVIF0035 Manage human factors in aviation operations357

AVIF0036 Implement regulations and policies during aviation safety and service operations360

Assessment Requirements for AVIF0036 Implement regulations and policies during aviation safety and service operations363

AVIF0037 Monitor the transfer of hazardous materials.....366

Assessment Requirements for AVIF0037 Monitor the transfer of hazardous materials..369

AVIF0038 Undertake aircraft underwater escape and survival.....372

Assessment Requirements for AVIF0038 Undertake aircraft underwater escape and survival.....375

AVIF0039 Utilise emergency breathing system.....379

Assessment Requirements for AVIF0039 Utilise emergency breathing system381

AVIF0040 Employ fatigue risk management practices in an aviation workplace.....384

Assessment Requirements for AVIF0040 Employ fatigue risk management practices in an aviation workplace.....387

AVIF0041 Maintain the safety of people and aircraft390

Assessment Requirements for AVIF0041 Maintain the safety of people and aircraft393

AVIF0042 Respond to abnormal and emergency situations in an aircraft397

Assessment Requirements for AVIF0042 Respond to abnormal and emergency situations in an aircraft401

AVIF0043 Apply relevant laws and regulations to the operation of an aerodrome405

Assessment Requirements for AVIF0043 Apply relevant laws and regulations to the operation of an aerodrome.....408

AVIF0044 Marshal aircraft411

Assessment Requirements for AVIF0044 Marshal aircraft414

AVIF0045 Facilitate the safety of aerodrome works and works site access417

Assessment Requirements for AVIF0045 Facilitate the safety of aerodrome works and works site access420

AVIF0046 Facilitate an aerodrome emergency response426

Assessment Requirements for AVIF0046 Facilitate an aerodrome emergency response 429

AVIF2007 Implement regulations and policies during check-in procedures434

Assessment Requirements for AVIF2007 Implement regulations and policies during check-in procedures438

AVIF2019 Work in aircraft confined spaces.....441

Assessment Requirements for AVIF2019 Work in aircraft confined spaces445

AVIF4008 Supervise cabin safety and security448

Assessment Requirements for AVIF4008 Supervise cabin safety and security.....452

AVIF5003 Manage human performance and team resources during air traffic control operations455

Assessment Requirements for AVIF5003 Manage human performance and team resources during air traffic control operations458

AVIF5013 Provide search and rescue alerting and emergency response.....460

Assessment Requirements for AVIF5013 Provide search and rescue alerting and emergency response463

AVIG0001 Work effectively in a transport security environment.....465

Assessment Requirements for AVIG0001 Work effectively in a transport security environment.....465

AVIG0002 Lead a work team or group in a controlled environment466

Assessment Requirements for AVIG0002 Lead a work team or group in a controlled environment.....469

AVIG0003 Work effectively in the aviation industry471

Assessment Requirements for AVIG0003 Work effectively in the aviation industry.....474

AVIG2003 Work in a socially diverse environment477

Assessment Requirements for AVIG2003 Work in a socially diverse environment.....480

AVIH0006 Navigate remote pilot aircraft systems483

Assessment Requirements for AVIH0006 Navigate remote pilot aircraft systems487

AVIH0007 Operate remote pilot aircraft systems under night visual line of sight (NVLOS)490

Assessment Requirements for AVIH0007 Operate remote pilot aircraft systems under night visual line of sight (NVLOS)493

AVIH0008 Operate remote pilot aircraft systems in extended visual line of sight (EVLOS)496

Assessment Requirements for AVIH0008 Operate remote pilot aircraft systems in extended visual line of sight (EVLOS).....499

AVIH0009 Manage aircraft flight planning and performance as pilot in command503

Assessment Requirements for AVIH0009 Manage aircraft flight planning and performance as pilot in command.....508

AVIH0010 Plan a flight under visual flight rules514

Assessment Requirements for AVIH0010 Plan a flight under visual flight rules.....517

AVIH0011 Manage aircraft performance and load522

Assessment Requirements for AVIH0011 Manage aircraft performance and load.....528

AVIH0012 Implement instrument flight rules planning procedures532

Assessment Requirements for AVIH0012 Implement instrument flight rules planning procedures537

AVIH0013 Plan a flight under instrument flight rules.....546

Assessment Requirements for AVIH0013 Plan a flight under instrument flight rules....549

AVIH0014 Navigate aircraft under visual flight rules555

Assessment Requirements for AVIH0014 Navigate aircraft under visual flight rules561

AVIH0015 Plan a flight under night visual flight rules565

Assessment Requirements for AVIH0015 Plan a flight under night visual flight rules....568

AVIH0016 Navigate aircraft under night visual flight rules571

Assessment Requirements for AVIH0016 Navigate aircraft under night visual flight rules575

AVIH0017 Navigate aircraft under instrument flight rules582

Assessment Requirements for AVIH0017 Navigate aircraft under instrument flight rules586

AVII0003 Advise on major services and attractions at aviation destinations591
Assessment Requirements for AVII0003 Advise on major services and attractions at aviation destinations594
AVII0004 Provide quality customer service.....597
Assessment Requirements for AVII0004 Provide quality customer service600
AVII0005 Provide customer service on an aircraft603
Assessment Requirements for AVII0005 Provide customer service on an aircraft.....607
AVII0006 Carry out beverage service on an aircraft609
Assessment Requirements for AVII0006 Carry out beverage service on an aircraft613
AVII0007 Provide advice about cuisine on an aircraft.....615
Assessment Requirements for AVII0007 Provide advice about cuisine on an aircraft618
AVII0008 Conduct in-flight retailing.....621
Assessment Requirements for AVII0008 Conduct in-flight retailing625
AVII0009 Check in aircraft passengers628
Assessment Requirements for AVII0009 Check in aircraft passengers633
AVII0010 Provide assistance to transit and arriving passengers.....636
Assessment Requirements for AVII0010 Provide assistance to transit and arriving passengers.....640
AVII0011 Carry out food preparation and service on an aircraft643
Assessment Requirements for AVII0011 Carry out food preparation and service on an aircraft.....649
AVII0012 Apply knowledge of the structure, products and services of an airline operator652
Assessment Requirements for AVII0012 Apply knowledge of the structure, products and services of an airline operator.....656
AVII0013 Carry out aircraft business and first class meal and non-alcoholic beverage service.....659
Assessment Requirements for AVII0013 Carry out aircraft business and first class meal and non-alcoholic beverage service663
AVII4013 Supervise cabin operations.....665
Assessment Requirements for AVII4013 Supervise cabin operations668
AVII4015 Monitor and enhance customer service excellence.....671
Assessment Requirements for AVII4015 Monitor and enhance customer service excellence675
AVIJ0001 Contribute to the achievement of on-time performance standards.....678
Assessment Requirements for AVIJ0001 Contribute to the achievement of on-time performance standards681
AVIJ0002 Conduct quality control operations related to refuelling and defuelling aircraft 684
Assessment Requirements for AVIJ0002 Conduct quality control operations related to refuelling and defuelling aircraft688
AVIL0002 Manage shifts, crewing and rostering activities in aviation691
Assessment Requirements for AVIL0002 Manage shifts, crewing and rostering activities in aviation.....694
AVIL0003 Manage a check-in queue.....697
Assessment Requirements for AVIL0003 Manage a check-in queue.....700
AVIL0004 Complete aircraft dispatch duties703
Assessment Requirements for AVIL0004 Complete aircraft dispatch duties706
AVIL0005 Plan an aircraft load709
Assessment Requirements for AVIL0005 Plan an aircraft load712
AVIL0006 Assess pavement concessions715
Assessment Requirements for AVIL0006 Assess pavement concessions.....718
AVILIC0003 Licence to operate a commercial aeroplane.....721
Assessment Requirements for AVILIC0003 Licence to operate a commercial aeroplane728
AVILIC0004 Licence to operate a commercial helicopter.....730
Assessment Requirements for AVILIC0004 Licence to operate a commercial helicopter737

AVIM0003 Conduct aeronautical knowledge training and flight training739
Assessment Requirements for AVIM0003 Conduct aeronautical knowledge training and flight training746
AVIM0004 Conduct training for the issue of an endorsement.....754
Assessment Requirements for AVIM0004 Conduct training for the issue of an endorsement758
AVIM0005 Facilitate non-technical skills instruction761
Assessment Requirements for AVIM0005 Facilitate non-technical skills instruction.....765
AVIM0006 Conduct a flight test.....769
Assessment Requirements for AVIM0006 Conduct a flight test.....774
AVIM0007 Plan and conduct multi-crew cooperation training.....778
Assessment Requirements for AVIM0007 Plan and conduct multi-crew cooperation training783
AVIM0008 Operate a simulator785
Assessment Requirements for AVIM0008 Operate a simulator788
AVIM0009 Facilitate training in a synthetic environment793
Assessment Requirements for AVIM0009 Facilitate training in a synthetic environment 798
AVIM0010 Conduct flight review.....805
Assessment Requirements for AVIM0010 Conduct flight review.....808
AVIM0011 Deliver operational flight management training.....811
Assessment Requirements for AVIM0011 Deliver operational flight management training 815
AVIN0003 Command an aircraft in a multi-crew environment.....819
Assessment Requirements for AVIN0003 Command an aircraft in a multi-crew environment.....823
AVIN0004 Supervise and manage safe flight operations as pilot in command827
Assessment Requirements for AVIN0004 Supervise and manage safe flight operations as pilot in command830
AVIN0005 Manage flight training834
Assessment Requirements for AVIN0005 Manage flight training837
AVIO0003 Apply electronic metal detection.....840
Assessment Requirements for AVIO0003 Apply electronic metal detection.....843
AVIO0004 Conduct frisk search of persons845
Assessment Requirements for AVIO0004 Conduct frisk search of persons849
AVIO0005 Conduct screening using explosive trace detection.....852
Assessment Requirements for AVIO0005 Conduct screening using explosive trace detection855
AVIO0006 Conduct vehicle search for access to security sensitive areas859
Assessment Requirements for AVIO0006 Conduct vehicle search for access to security sensitive areas862
AVIO0007 Control access to and exit from a security sensitive area.....864
Assessment Requirements for AVIO0007 Control access to and exit from a security sensitive area.....867
AVIO0008 Establish and maintain a sterile sensitive area.....871
Assessment Requirements for AVIO0008 Establish and maintain a sterile sensitive area 874
AVIO0009 Identify and handle weapons, explosives and prohibited items877
Assessment Requirements for AVIO0009 Identify and handle weapons, explosives and prohibited items880
AVIO0010 Identify powders, liquids, aerosols and gels (PLAGs)882
Assessment Requirements for AVIO0010 Identify powders, liquids, aerosols and gels (PLAGs).....885
AVIO0011 Manage disruptive behaviour and unlawful interference within a transport security environment887

Assessment Requirements for AVIO0011 Manage disruptive behaviour and unlawful interference within a transport security environment890

AVIO0012 Manage the flow of items for screening by X-ray screening equipment.....894

Assessment Requirements for AVIO0012 Manage the flow of items for screening by X-ray screening equipment897

AVIO0013 Operate body scanner.....900

Assessment Requirements for AVIO0013 Operate body scanner.....903

AVIO0014 Screen articles by interpreting X-ray images906

Assessment Requirements for AVIO0014 Screen articles by interpreting X-ray images.909

AVIO0015 Undertake physical search of cargo and articles912

Assessment Requirements for AVIO0015 Undertake physical search of cargo and articles915

AVIO0016 Manage security procedures as pilot in command.....917

Assessment Requirements for AVIO0016 Manage security procedures as pilot in command920

AVIO0017 Manage disruptive behaviour and unlawful interference with aviation924

Assessment Requirements for AVIO0017 Manage disruptive behaviour and unlawful interference with aviation927

AVIO0018 Use firearms on an aerodrome to control wildlife hazards930

Assessment Requirements for AVIO0018 Use firearms on an aerodrome to control wildlife hazards933

AVIO0019 Apply and monitor aviation workplace security procedures936

Assessment Requirements for AVIO0019 Apply and monitor aviation workplace security procedures939

AVIO0020 Monitor airside access and airside driving.....942

Assessment Requirements for AVIO0020 Monitor airside access and airside driving945

AVIO2013 Undertake emergency response action to a security threat949

Assessment Requirements for AVIO2013 Undertake emergency response action to a security threat.....952

AVIO4003 Implement airside access955

Assessment Requirements for AVIO4003 Implement airside access958

AVIP2001 Capture records into a records keeping system.....961

Assessment Requirements for AVIP2001 Capture records into a records keeping system964

AVIR0001 Service customer airline contracts967

Assessment Requirements for AVIR0001 Service customer airline contracts970

AVIW0001 Operate and manage advanced remote pilot aircraft systems973

Assessment Requirements for AVIW0001 Operate and manage advanced remote pilot aircraft systems.....976

AVIW0002 Manage multi-crew operation in beyond visual line of sight (BVLOS) operations980

Assessment Requirements for AVIW0002 Manage multi-crew operation in beyond visual line of sight (BVLOS) operations984

AVIW0003 Undertake helicopter aquatic rescue and recovery.....988

Assessment Requirements for AVIW0003 Undertake helicopter aquatic rescue and recovery.....992

AVIW0004 Perform operational inspections on remote operated systems995

Assessment Requirements for AVIW0004 Perform operational inspections on remote operated systems998

AVIW0005 Determine meteorological factors for remote pilot aircraft operations.....1001

Assessment Requirements for AVIW0005 Determine meteorological factors for remote pilot aircraft operations1004

AVIW0006 Perform infrastructure inspections using remote operated systems1010

Assessment Requirements for AVIW0006 Perform infrastructure inspections using remote operated systems1014

AVIW0007 Perform aerial mapping and modelling using remote piloted aircraft systems1018
Assessment Requirements for AVIW0007 Perform aerial mapping and modelling using remote piloted aircraft systems.....1022

AVIW0008 Conduct aerial search using remote piloted aircraft1024
Assessment Requirements for AVIW0008 Conduct aerial search using remote piloted aircraft.....1027

AVIW0009 Conduct aerial delivery/retrieval operations using remote piloted aircraft systems.....1029
Assessment Requirements for AVIW0009 Conduct aerial delivery/retrieval operations using remote piloted aircraft systems.....1032

AVIW0010 Operate an aërobridge1035
Assessment Requirements for AVIW0010 Operate an aërobridge.....1038

AVIW0011 Operate baggage tug1041
Assessment Requirements for AVIW0011 Operate baggage tug.....1044

AVIW0012 Operate aircraft refuelling nozzle1047
Assessment Requirements for AVIW0012 Operate aircraft refuelling nozzle1050

AVIW0013 Be airborne extracted by suspended rope1054
Assessment Requirements for AVIW0013 Be airborne extracted by suspended rope ...1057

AVIW0014 Be airborne extracted using suspended extraction equipment.....1061
Assessment Requirements for AVIW0014 Be airborne extracted using suspended extraction equipment.....1064

AVIW0015 Fast rope from a helicopter.....1068
Assessment Requirements for AVIW0015 Fast rope from a helicopter.....1072

AVIW0016 Rappel from a helicopter.....1076
Assessment Requirements for AVIW0016 Rappel from a helicopter.....1080

AVIW0017 Operate aircraft embarkation and disembarkation equipment.....1084
Assessment Requirements for AVIW0017 Operate aircraft embarkation and disembarkation equipment1087

AVIW0018 Operate ramp equipment.....1090
Assessment Requirements for AVIW0018 Operate ramp equipment1093

AVIW0019 Operate aircraft push-out tug1096
Assessment Requirements for AVIW0019 Operate aircraft push-out tug.....1099

AVIW0020 Refuel aircraft1103
Assessment Requirements for AVIW0020 Refuel aircraft1107

AVIW0021 Defuel aircraft.....1111
Assessment Requirements for AVIW0021 Defuel aircraft1115

AVIW0022 Coordinate aircraft movements and storage1119
Assessment Requirements for AVIW0022 Coordinate aircraft movements and storage 1122

AVIW0023 Implement wildlife hazard control measures1124
Assessment Requirements for AVIW0023 Implement wildlife hazard control measures1126

AVIW0024 Perform down the wire duties1129
Assessment Requirements for AVIW0024 Perform down the wire duties.....1131

AVIW0025 Complete aircraft and flight equipment pre- and post-flight actions.....1135
Assessment Requirements for AVIW0025 Complete aircraft and flight equipment pre- and post-flight actions.....1138

AVIW0026 Conduct night vision imaging system operations.....1141
Assessment Requirements for AVIW0026 Conduct night vision imaging system operations 1144

AVIW0027 Deliver pyrotechnics and handheld stores1150
Assessment Requirements for AVIW0027 Deliver pyrotechnics and handheld stores...1153

AVIW0028 Operate and manage remote pilot aircraft systems1156
Assessment Requirements for AVIW0028 Operate and manage remote pilot aircraft systems.....1159

AVIW0029 Manage pre- and post-flight actions.....1162

Assessment Requirements for AVIW0029 Manage pre - and post-flight actions.....1165

AVIW0030 Manage aircraft sensor systems1168

Assessment Requirements for AVIW0030 Manage aircraft sensor systems1171

AVIW0031 Supervise aircraft refuelling.....1174

Assessment Requirements for AVIW0031 Supervise aircraft refuelling1177

AVIW0032 Operate and manage aircraft systems1181

Assessment Requirements for AVIW0032 Operate and manage aircraft systems.....1184

AVIW0033 Coordinate the removal of disabled aircraft1189

Assessment Requirements for AVIW0033 Coordinate the removal of disabled aircraft 1192

AVIW0034 Perform non-pilot cockpit duties.....1196

Assessment Requirements for AVIW0034 Perform non-pilot cockpit duties1199

AVIW5013 Operate air traffic control equipment and workstations1202

Assessment Requirements for AVIW5013 Operate air traffic control equipment and
workstations1205

AVIY0011 Conduct maintenance test flight activities1208

Assessment Requirements for AVIY0011 Conduct maintenance test flight activities....1212

AVIY0015 Perform an aerobatic sequence1215

Assessment Requirements for AVIY0015 Perform an aerobatic sequence1218

AVIY0016 Lead formation flight.....1222

Assessment Requirements for AVIY0016 Lead formation flight.....1226

AVIY0017 Control aircraft in advanced flight manoeuvres.....1229

Assessment Requirements for AVIY0017 Control aircraft in advanced flight manoeuvres1232

AVIY0023 Launch, control and recover a remotely piloted aircraft1235

Assessment Requirements for AVIY0023 Launch, control and recover a remotely piloted
aircraft.....1239

AVIY0024 Operate remote pilot airship.....1242

Assessment Requirements for AVIY0024 Operate remote pilot airship.....1245

AVIY0025 Operate powerlift and tilt rotor remote pilot aircraft systems.....1248

Assessment Requirements for AVIY0025 Operate powerlift and tilt rotor remote pilot
aircraft systems.....1253

AVIY0026 Conduct aerial application operations using remote pilot aircraft systems .1256

Assessment Requirements for AVIY0026 Conduct aerial application operations using
remote pilot aircraft systems.....1261

AVIY0027 Operate multi-rotor remote pilot aircraft systems1264

Assessment Requirements for AVIY0027 Operate multi-rotor remote pilot aircraft
systems.....1267

AVIY0029 Operate rotary wing remote pilot aircraft systems.....1270

Assessment Requirements for AVIY0029 Operate rotary wing remote pilot aircraft
systems.....1275

AVIY0030 Operate fixed wing remote pilot aircraft systems1278

Assessment Requirements for AVIY0030 Operate fixed wing remote pilot aircraft systems 1282

AVIY0031 Apply the principles of air law to remote pilot aircraft systems operations .1286

Assessment Requirements for AVIY0031 Apply the principles of air law to remote pilot
aircraft systems operations1289

AVIY0032 Apply RPAS payload and configuration management principles1291

Assessment Requirements for AVIY0032 Apply RPAS payload and configuration
management principles1297

AVIY0033 Operate aircraft using aircraft flight instruments.....1301

Assessment Requirements for AVIY0033 Operate aircraft using aircraft flight
instruments.....1305

AVIY0034 Operate in controlled airspace1308

Assessment Requirements for AVIY0034 Operate in controlled airspace.....1311

AVIY0035 Operate in Class G airspace.....1313

Assessment Requirements for AVIY0035 Operate in Class G airspace.....	1315
AVIY0036 Operate at non-towered aerodromes.....	1317
Assessment Requirements for AVIY0036 Operate at non-towered aerodromes	1321
AVIY0037 Operate at a controlled aerodrome	1324
Assessment Requirements for AVIY0037 Operate at a controlled aerodrome	1328
AVIY0038 Operate aeroplane at low level.....	1330
Assessment Requirements for AVIY0038 Operate aeroplane at low level.....	1335
AVIY0039 Conduct aerial application operations.....	1340
Assessment Requirements for AVIY0039 Conduct aerial application operations	1346
AVIY0040 Apply aeronautical knowledge to aviation operations	1349
Assessment Requirements for AVIY0040 Apply aeronautical knowledge to aviation operations	1352
AVIY0041 Apply the principles of civil air law to aviation operations.....	1354
Assessment Requirements for AVIY0041 Apply the principles of civil air law to aviation operations	1358
AVIY0042 Apply aeronautical knowledge and civil air law to flight dispatch operations.....	1360
Assessment Requirements for AVIY0042 Apply aeronautical knowledge and civil air law to flight dispatch operations.....	1364
AVIY0043 Monitor flight performance	1368
Assessment Requirements for AVIY0043 Monitor flight performance	1373
AVIY0044 Conduct a 2D instrument approach.....	1380
Assessment Requirements for AVIY0044 Conduct a 2D instrument approach.....	1383
AVIY0045 Conduct a 3D instrument approach.....	1386
Assessment Requirements for AVIY0045 Conduct a 3D instrument approach.....	1389
AVIY0046 Execute advanced aeroplane manoeuvres and procedures.....	1392
Assessment Requirements for AVIY0046 Execute advanced aeroplane manoeuvres and procedures	1396
AVIY0047 Manage abnormal aeroplane flight situations	1400
Assessment Requirements for AVIY0047 Manage abnormal aeroplane flight situations.....	1404
AVIY0048 Taxi helicopter.....	1408
Assessment Requirements for AVIY0048 Taxi helicopter.....	1411
AVIY0049 Operate helicopter at low level.....	1414
Assessment Requirements for AVIY0049 Operate helicopter at low level	1419
AVIY0050 Perform instrument arrival and standard arrival route procedures	1423
Assessment Requirements for AVIY0050 Perform instrument arrival and standard arrival route procedures	1426
AVIY0051 Conduct helicopter landing site and unprepared helicopter landing site operations	1429
Assessment Requirements for AVIY0051 Conduct helicopter landing site and unprepared helicopter landing site operations.....	1432
AVIY0052 Control remote pilot aircraft systems on the ground.....	1436
Assessment Requirements for AVIY0052 Control remote pilot aircraft systems on the ground	1439
AVIY0053 Manage remote pilot aircraft systems energy source requirements.....	1442
Assessment Requirements for AVIY0053 Manage remote pilot aircraft systems energy source requirements.....	1445
AVIY0054 Control aeroplane on the ground	1448
Assessment Requirements for AVIY0054 Control aeroplane on the ground.....	1451
AVIY0055 Take off aeroplane	1454
Assessment Requirements for AVIY0055 Take off aeroplane	1457
AVIY0056 Control aeroplane in normal flight.....	1460
Assessment Requirements for AVIY0056 Control aeroplane in normal flight	1464
AVIY0057 Land aeroplane	1468

Assessment Requirements for AVIY0057 Land aeroplane.....1471
AVIY0058 Manage aircraft fuel1475
Assessment Requirements for AVIY0058 Manage aircraft fuel.....1478
AVIY0059 Control helicopter on the ground.....1481
Assessment Requirements for AVIY0059 Control helicopter on the ground.....1484
AVIY0060 Control helicopter in hovering flight.....1487
Assessment Requirements for AVIY0060 Control helicopter in hovering flight.....1492
AVIY0061 Take off helicopter and approach to hover.....1495
Assessment Requirements for AVIY0061 Take off helicopter and approach to hover..1499
AVIY0062 Control helicopter in normal flight1502
Assessment Requirements for AVIY0062 Control helicopter in normal flight1507
AVIY0063 Execute advanced helicopter manoeuvres and procedures.....1510
Assessment Requirements for AVIY0063 Execute advanced helicopter manoeuvres and
procedures1515
AVIY0064 Manage abnormal and emergency helicopter flight situations1518
Assessment Requirements for AVIY0064 Manage abnormal and emergency helicopter
flight situations1522
AVIY0065 Conduct external load-lift operations.....1525
Assessment Requirements for AVIY0065 Conduct external load-lift operations1528
AVIY0066 Conduct hoisting operations.....1532
Assessment Requirements for AVIY0066 Conduct hoisting operations1535
AVIY0067 Conduct airborne extraction operations1539
Assessment Requirements for AVIY0067 Conduct airborne extraction operations1542
AVIY0068 Conduct airborne rappelling operations1546
Assessment Requirements for AVIY0068 Conduct airborne rappelling operations.....1549
AVIY0069 Pilot a helicopter during external load operations.....1553
Assessment Requirements for AVIY0069 Pilot a helicopter during external load
operations1557
AVIY0070 Pilot a helicopter during rappelling operations1561
Assessment Requirements for AVIY0070 Pilot a helicopter during rappelling operations 1565
AVIY0071 Pilot a helicopter during hoisting operations.....1569
Assessment Requirements for AVIY0071 Pilot a helicopter during hoisting operations 1573
AVIY0072 Operate a multi-engine aeroplane1577
Assessment Requirements for AVIY0072 Operate a multi-engine aeroplane.....1581
AVIY0073 Operate aircraft in the traffic pattern at night.....1585
Assessment Requirements for AVIY0073 Operate aircraft in the traffic pattern at night 1589
AVIY0074 Perform non-published instrument departure procedures.....1593
Assessment Requirements for AVIY0074 Perform non-published instrument departure
procedures1596
AVIY0075 Perform published instrument departure procedures1599
Assessment Requirements for AVIY0075 Perform published instrument departure
procedures1602
AVIY0076 Perform visual circling approach.....1604
Assessment Requirements for AVIY0076 Perform visual circling approach.....1607
AVIY0077 Conduct a 2D non-directional beacon instrument approach1610
Assessment Requirements for AVIY0077 Conduct a 2D non-directional beacon instrument
approach.....1613
AVIY0078 Conduct a 2D very high frequency omni-directional radio range instrument
approach.....1616
Assessment Requirements for AVIY0078 Conduct a 2D very high frequency
omni-directional radio range instrument approach1619
AVIY0079 Conduct a 3D instrument landing system instrument approach.....1622

Assessment Requirements for AVIY0079 Conduct a 3D instrument landing system instrument approach.....1626

AVIY0080 Conduct a 2D distance measuring equipment global navigation satellite system instrument approach.....1629

Assessment Requirements for AVIY0080 Conduct a 2D distance measuring equipment global navigation satellite system instrument approach1633

AVIY0081 Conduct a 2D global navigation satellite system non-precision instrument approach.....1636

Assessment Requirements for AVIY0081 Conduct a 2D global navigation satellite system non-precision instrument approach1640

AVIY0082 Operate a multi-engine helicopter.....1643

Assessment Requirements for AVIY0082 Operate a multi-engine helicopter1646

AVIY4057 Perform helicopter deck landing operations1650

Assessment Requirements for AVIY4057 Perform helicopter deck landing operations 1654

AVIY4061 Perform aerobatic manoeuvres1658

Assessment Requirements for AVIY4061 Perform aerobatic manoeuvres.....1661

AVIY4063 Perform close formation flight1665

Assessment Requirements for AVIY4063 Perform close formation flight.....1668

AVIY5022 Manage traffic flow1672

Assessment Requirements for AVIY5022 Manage traffic flow1675

AVIY5048 Provide approach control services1678

Assessment Requirements for AVIY5048 Provide approach control services1682

AVIY5049 Provide area control services1686

Assessment Requirements for AVIY5049 Provide area control services.....1690

AVIY5050 Provide aerodrome control services1694

Assessment Requirements for AVIY5050 Provide aerodrome control services.....1698

AVIZ0002 Maintain and manage situational awareness as pilot in command1701

Assessment Requirements for AVIZ0002 Maintain and manage situational awareness as pilot in command1704

AVIZ0003 Maintain basic situational awareness in an aviation workplace.....1708

Assessment Requirements for AVIZ0003 Maintain basic situational awareness in an aviation workplace.....1711

AVIZ0004 Maintain security awareness and vigilance in an aviation workplace.....1715

Assessment Requirements for AVIZ0004 Maintain security awareness and vigilance in an aviation workplace.....1718

AVIZ0005 Apply situational awareness in remote pilot aircraft systems operations.....1721

Assessment Requirements for AVIZ0005 Apply situational awareness in remote pilot aircraft systems operations1724

AVIZ0006 Manage situational awareness in aircraft flight.....1727

Assessment Requirements for AVIZ0006 Manage situational awareness in aircraft flight 1730

AVIZ5049 Manage situational awareness in the air traffic control environment.....1733

Assessment Requirements for AVIZ5049 Manage situational awareness in the air traffic control environment.....1736

BSBADM502 Manage meetings1738

Assessment Requirements for BSBADM502 Manage meetings1742

BSBAUD402 Participate in a quality audit1744

Assessment Requirements for BSBAUD402 Participate in a quality audit.....1748

BSBAUD501 Initiate a quality audit.....1750

Assessment Requirements for BSBAUD501 Initiate a quality audit.....1754

BSBAUD503 Lead a quality audit1756

Assessment Requirements for BSBAUD503 Lead a quality audit1760

BSBCMM301 Process customer complaints1762

Assessment Requirements for BSBCMM301 Process customer complaints1765

BSBCMM401 Make a presentation1767
Assessment Requirements for BSB CMM401 Make a presentation.....1770
BSBCUS301 Deliver and monitor a service to customers.....1772
Assessment Requirements for BSB CUS301 Deliver and monitor a service to customers 1776
BSBCUS501 Manage quality customer service1778
Assessment Requirements for BSB CUS501 Manage quality customer service.....1781
BSBFLM303 Contribute to effective workplace relationships1783
Assessment Requirements for BSBFLM303 Contribute to effective workplace
relationships1787
BSBFLM305 Support operational plan1789
Assessment Requirements for BSBFLM305 Support operational plan.....1792
BSBFLM306 Provide workplace information and resourcing plans1794
Assessment Requirements for BSBFLM306 Provide workplace information and
resourcing plans.....1798
BSBFLM312 Contribute to team effectiveness1800
Assessment Requirements for BSBFLM312 Contribute to team effectiveness1803
BSBHRM405 Support the recruitment, selection and induction of staff1805
Assessment Requirements for BSBHRM405 Support the recruitment, selection and
induction of staff.....1809
BSBHRM506 Manage recruitment selection and induction processes1811
Assessment Requirements for BSBHRM506 Manage recruitment selection and induction
processes.....1815
BSBHRM513 Manage workforce planning.....1817
Assessment Requirements for BSBHRM513 Manage workforce planning1821
BSBINM501 Manage an information or knowledge management system.....1823
Assessment Requirements for BSBINM501 Manage an information or knowledge
management system.....1827
BSBLDR403 Lead team effectiveness1829
Assessment Requirements for BSBLDR403 Lead team effectiveness.....1832
BSBLDR502 Lead and manage effective workplace relationships1834
Assessment Requirements for BSBLDR502 Lead and manage effective workplace
relationships1837
BSBLDR511 Develop and use emotional intelligence.....1839
Assessment Requirements for BSBLDR511 Develop and use emotional intelligence1842
BSBLDR802 Lead the strategic planning process for an organisation.....1844
Assessment Requirements for BSBLDR802 Lead the strategic planning process for an
organisation.....1848
BSBLED401 Develop teams and individuals.....1850
Assessment Requirements for BSBLED401 Develop teams and individuals1854
BSBMGT401 Show leadership in the workplace1856
Assessment Requirements for BSBMGT401 Show leadership in the workplace1860
BSBMGT402 Implement operational plan1862
Assessment Requirements for BSBMGT402 Implement operational plan.....1866
BSBMGT405 Provide personal leadership1868
Assessment Requirements for BSBMGT405 Provide personal leadership.....1872
BSBMGT502 Manage people performance1874
Assessment Requirements for BSBMGT502 Manage people performance1878
BSBMGT516 Facilitate continuous improvement.....1880
Assessment Requirements for BSBMGT516 Facilitate continuous improvement1884
BSBMGT517 Manage operational plan.....1886
Assessment Requirements for BSBMGT517 Manage operational plan.....1890
BSBMKG413 Promote products and services.....1892
Assessment Requirements for BSBMKG413 Promote products and services1896

BSBPMG410 Apply project time management techniques	1898
Assessment Requirements for BSBPMG410 Apply project time management techniques	1901
BSBPRC502 Manage supplier relationships	1903
Assessment Requirements for BSBPRC502 Manage supplier relationships	1907
BSBPUB501 Manage the public relations publication process.....	1909

AVI10119 Certificate I in Aviation (Foundation Skills)

Modification History

Release 1. This is the first release of this qualification in the AVI Aviation Training Package.

Qualification Description

This qualification provides individuals with technical and non-technical aviation skills to operate effectively in a range of entry level aviation roles.

Individuals working at this level will apply knowledge and skills to demonstrate autonomy in highly structured and stable aviation operating contexts within narrow parameters.

Licensing, legislative, regulatory and certification requirements that apply to this qualification can vary between states and territories. Compliance with these requirements may be required nationally and/or in various jurisdictions.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **7 units of competency** comprising:

5 core units listed below **plus**

2 general elective units from the general elective units listed below. The general elective units must contribute to the vocational outcomes of the qualification.

Core units

AVIF0023	Apply aircraft safety procedures
AVIF0034	Apply aviation work health and safety procedures
AVIG0003	Work effectively in the aviation industry
TLIE2007	Use communications systems
TLIO1002	Follow security procedures when working with passengers and personnel

General elective units

AVID0009	Load and secure aviation freight and baggage
AVID0010	Unload aviation freight and baggage
AVIE0003	Operate aeronautical radio
AVIZ0003	Maintain basic situational awareness in an aviation workplace
TLIB0003	Use and maintain minor mechanical equipment
TLIC1051	Operate commercial vehicle
TLID2003	Handle dangerous goods/hazardous substances
TLIF2018	Operate firefighting equipment
TLII3020	Provide assistance to customers
TLIK2010	Use infotechnology devices in the workplace

Qualification Mapping Information

This qualification replaces and is equivalent to AVI10116 Certificate I in Aviation (Foundation Skills).

AVI20118 Certificate II in Transport Security Protection

Modification History

Release 1. This is the first release of this qualification in the AVI Aviation Training Package.

Qualification Description

This qualification provides individuals with general and specialist skills to operate effectively in a broad range of transport security screening roles.

Transport Security Screening Officer roles include:

- Air Cargo Examination Officer
- Domestic Airport Screening Officer
- International Airport Screening Officer
- Maritime Screening Officer

This qualification includes the units of competency required by Transport Security Screening Officers to perform transport security screening functions including, controlling access to security sensitive areas, undertaking physical searches, and identifying and handling weapons, explosives and prohibited items. A Transport Security Screening Officer must also apply effective communication skills to work in a broad range of transport security protection roles.

Transport Security screening personnel working at this level will apply knowledge and skills to demonstrate autonomy and limited judgement in structured and stable contexts within narrow parameters.

Individuals seeking accreditation as a Transport Security Screening Officer should check industry specific accreditation requirements with the Aviation and Maritime Security Division of the Department of Home Affairs.

This qualification contains one not for public access (NFPA) restricted unit of competency. Content of NFPA units of competency is not published on the National Register. Access to this unit of competency is critical to security screening operations. Content of this unit is maintained separately and is only available to Registered Training Organisations (RTO's) authorised by the Department of Home Affairs (or its successor). To gain access contact the department at screeenerreform@homeaffairs.gov.au.

Licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

Individuals undertaking this qualification must have passed a valid background check. A valid background check for the purposes of an individual undertaking the qualification is a background check on an applicant for, or the holder of an aviation security identification card or maritime security identification card.

Packaging Rules

A minimum number of 9 units of competency comprising:

- 5 core units listed below; plus
 - Selecting all listed specialist elective units from either Group A, B, C or D below.
- Air Cargo Examination Officer
 - All elective units from Group A; or
- Domestic Airport Screening Officer
 - All elective units from Group B; or
- International Airport Screening Officer
 - All elective units from Group C; or
- Maritime Screening Officer
 - All elective units from Group D

Where a defined specialist elective Group is selected, the resultant qualification should be titled;

Group A - Certificate II in Transport Security Protection (Air Cargo Examination Officer)

Group B - Certificate II in Transport Security Protection (Domestic Airport Screening Officer)

Group C - Certificate II in Transport Security Protection (International Airport Screening Officer)

Group D - Certificate II in Transport Security Protection (Maritime Screening Officer)

Qualification	Air Cargo Examination Officer	Domestic Airport Screening Officer	International Airport Screening Officer	Maritime Screening Officer
Core Units	5	5	5	5
Specialist Elective Units	4	10	12	8
Total	9	15	17	13

Core units

AVIO0015 Undertake physical search of cargo and articles

AVIO0009	Identify and handle weapons, explosives and prohibited items
AVIG0001	Work effectively in a transport security industry
AVIO0007	Control access to and exit from a security sensitive area
AVIO0008	Establish and maintain a sterile sensitive area

Group A - Air Cargo Examination Officer

AVIO0005	Conduct screening using explosive trace detection
AVIO0003	Apply electronic metal detection
AVIO0014	Screen articles by interpreting X-ray images
AVIF0015	Apply awareness of dangerous goods and hazardous substances in the transport security environment

Group B - Domestic Airport Screening Officer

AVIF0015	Apply awareness of dangerous goods and hazardous substances in the transport security environment
AVIO0006	Conduct vehicle search for access to security sensitive areas
AVIO0011	Manage disruptive behaviour and unlawful interference within a transport security environment
AVIO0004	Conduct frisk search of persons
AVIO0005	Conduct screening using explosive trace detection
AVIO0012	Manage the flow of items for screening by X-ray screening equipment
AVIO0014	Screen articles by interpreting X-ray images
CPPSEC3128	Conduct security screening using walk-through metal detection equipment
CPPSEC3130	Conduct security screening using hand-held metal detectors
CPPSEC3121	Control persons using empty hand techniques

Group C - International Airport Screening Officer

AVIO0011	Manage disruptive behaviour and unlawful interference within a transport security environment
AVIO0004	Conduct frisk search of persons

AVIO0005	Conduct screening using explosive trace detection
AVIO0012	Manage the flow of items for screening by X-ray screening equipment
AVIO0014	Screen articles by interpreting X-ray images
AVIO0013	Operate body scanner
AVIO0010	Identify powders, liquids, aerosols and gels (PLAGs)
AVIO0006	Conduct vehicle search for access to security sensitive areas
AVIF0015	Apply awareness of dangerous goods and hazardous substances in the transport security environment
CPPSEC3121	Control persons using empty hand techniques
CPPSEC3128	Conduct security screening using walk-through metal detection equipment
CPPSEC3130	Conduct security screening using hand-held metal detectors

Group D - Maritime Screening Officer

AVIO0011	Manage disruptive behaviour and unlawful interference within a transport security environment
AVIO0004	Conduct frisk search of persons
AVIO0012	Manage the flow of items for screening by X-ray screening equipment
AVIO0014	Screen articles by interpreting X-ray images
AVIO0006	Conduct vehicle search for access to security sensitive areas
CPPSEC3121	Control persons using empty hand techniques
CPPSEC3128	Conduct security screening using walk-through metal detection equipment
CPPSEC3130	Conduct security screening using hand-held metal detectors

Qualification Mapping Information

This qualification replaces and is not equivalent to:

AVI20416 Certificate II in Aviation Transport Protection (Checked Baggage Screener) and

AVI20316 Certificate II in Aviation Transport Protection (Passenger and Non-Passenger Screener)

AVI20119 Certificate II in Aviation (Flight Operations-Cargo Services)

Modification History

Release 1. This is the first release of this qualification in the AVI Aviation Training Package.

Qualification Description

Individuals working at this level will apply knowledge and skills to demonstrate autonomy and limited judgement in structured and stable aviation operating contexts within narrow parameters.

Licensing, legislative, regulatory and certification requirements that apply to this qualification can vary between states and territories. Compliance with these requirements may be required nationally and/or in various jurisdictions.

Occupations may include:

- Cargo Services Operator
- Loadmaster.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **20 units of competency** comprising:

12 core units listed below **plus**

2 units selected from **Group A: Accepting freight, plus**

2 units selected from the **Group B: Packaging freight, plus**

2 units selected from **Group C: Load and unload freight, plus**

2 units selected from the **General elective units** listed below.

Core units

AVIF0023 Apply aircraft safety procedures

AVIF0034 Apply aviation work health and safety procedures

AVIF0040 Employ fatigue risk management practices in an aviation workplace

AVIG0003	Work effectively in the aviation industry
AVIZ0003	Maintain basic situational awareness in an aviation workplace
AVIZ0004	Maintain security awareness and vigilance in an aviation workplace
TLID2003	Handle dangerous goods/hazardous substances
TLIE0002	Process workplace documentation
TLIF2018	Operate firefighting equipment
TLIJ2001	Apply quality procedures
TLIK2010	Use infotechnology devices in the workplace
TLIO1002	Follow security procedures when working with passengers and personnel

Elective units

Group A: Accepting freight

AVID0005	Accept dangerous goods for air transport
AVID0008	Accept freight for air transport
TLIB0003	Use and maintain minor mechanical equipment

Group B: Packaging freight

AVID0003	Package dangerous goods for air transport
AVID0006	Prepare freight for flight
AVID0007	Conduct aviation freight weighing operations
AVIL0005	Plan an aircraft load

Group C: Load and unload freight

AVID0009	Load and secure aviation freight and baggage
AVID0010	Unload aviation freight and baggage
TLID2016	Load and unload explosives/dangerous goods
TLIF2012	Apply safe procedures when handling/transporting dangerous goods or explosives
TLIU1009	Monitor plant and equipment in an environmentally sustainable manner

General elective units

AVIE0003	Operate aeronautical radio
AVIF0036	Implement regulations and policies during aviation safety and service operations
TLIB2001	Check and assess operational capabilities of equipment
TLIE2007	Use communications systems
TLIL2008	Complete routine administrative tasks

Qualification Mapping Information

This qualification replaces and is **not** equivalent to AVI20116 Certificate II in Aviation (Flight Operations-Cargo Services).

AVI20219 Certificate II in Aviation (Ground Operations and Service)

Modification History

Release 1. This is the first release of this qualification in the AVI Aviation Training Package

Qualification Description

This qualification provides individuals with technical and non-technical aviation skills to operate effectively in a broad range of ground operations and service roles.

Individuals working at this level will apply knowledge and skills to demonstrate autonomy and limited judgement in structured and stable aviation operating contexts within narrow parameters.

Licensing, legislative, regulatory and certification requirements that apply to this qualification can vary between states and territories. Compliance with these requirements may be required nationally and/or in various jurisdictions.

Use for Defence Aviation is to be in accordance with relevant Defence Orders, Instructions, Publications and Regulations.

Occupations may include:

Baggage Handler
Customer Service
Ground Operations
Ramp Operator.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **15 units of competency** comprising:

10 core units listed below **plus**

5 general elective units from the general elective units listed below. The general elective units must contribute to the vocational outcomes of the qualification.

Core units

AVIF0023 Apply aircraft safety procedures

AVIF0034	Apply aviation work health and safety procedures
AVIF0040	Employ fatigue risk management practices in an aviation workplace
AVIG0003	Work effectively in the aviation industry
AVIJ0001	Contribute to the achievement of on-time performance standards
AVIZ0003	Maintain basic situational awareness in an aviation workplace
TLIE2007	Use communication systems
TLIJ2001	Apply quality procedures
TLIK2010	Use infotechnology devices in the workplace
TLIO1002	Follow security procedures when working with passengers and personnel

General elective units

AVIC0001	Drive on the airside
AVID0004	Conduct baggage handling operations
AVID0005	Accept dangerous goods for air transport
AVID0006	Prepare freight for flight
AVID0007	Conduct aviation freight weighing operations
AVID0008	Accept freight for air transport
AVID0009	Load and secure aviation freight and baggage
AVID0010	Unload aviation freight and baggage
AVIE0003	Operate aeronautical radio
AVIE0004	Conduct radio procedures in an aviation operational environment
AVIF2007	Implement regulations and policies during check-in procedures
AVIF0037	Monitor the transfer of hazardous materials
AVIF2019	Work in aircraft confined spaces
AVII0004	Provide quality customer service
AVII0009	Check in aircraft passengers
AVII0010	Provide assistance to transit and arriving passengers

AVIL0003	Manage a check-in queue
AVIP2001	Capture records into a records keeping system
AVIW0010	Operate an aerobridge
AVIW0011	Operate baggage tug
AVIW0012	Operate aircraft refuelling nozzle
BSBCMM301	Process customer complaints
HLTAID003	Provide first aid
SITTTSL007	Process reservations
TLIA2009	Complete and check import/export documentation
TLIA2013	Receive goods
TLIA2014	Use product knowledge to complete work operations
TLIA2020	Replenish stock
TLIA2022	Participate in stocktakes
TLIB2001	Check and assess operational capabilities of equipment
TLIB2003	Carry out vehicle servicing and maintenance
TLIB0002	Carry out vehicle inspection
TLIB2008	Carry out inspection of trailers
TLIB0003	Use and maintain minor mechanical equipment
TLIB2073	Clean road tankers
TLIB2119	Carry out maintenance of trailers
TLIC1051	Operate commercial vehicle
TLIC3003	Drive medium rigid vehicle
TLID2003	Handle dangerous goods/hazardous substances
TLID2004	Load and unload goods/cargo
TLID2010	Operate a forklift
TLID2013	Move materials mechanically using automated equipment

TLID2016	Load and unload explosives and dangerous goods
TLIE0002	Process workplace documentation
TLIF2012	Apply safe procedures when handling/transporting dangerous goods or explosives
TLIF2018	Operate firefighting equipment
TLII1002	Apply customer service skills
TLII3020	Provide assistance to customers
TLIK2003	Apply keyboard skills
TLIK2007	Perform electronic data interchange to transmit shipping documentation
TLIL2008	Complete routine administrative tasks
TLIL2031	Monitor and process attendance records
TLIO2011	Provide revenue protection measures
TLIP2017	Maintain control of records
TLIP2018	Provide information from and about records
TLIP2024	Conduct financial transactions
TLIP2029	Prepare and process financial documents
TLIP2033	Sell products and services
TLIU1009	Monitor plant and equipment in an environmentally sustainable manner

Qualification Mapping Information

This qualification replaces and is equivalent to AVI20216 Certificate II in Aviation (Ground Operations and Service).

AVI30119 Certificate III in Aviation (Aerodrome Operations)

Modification History

Release 1. This is the first release of this qualification in the AVI Aviation Training Package.

Qualification Description

This qualification provides individuals with technical and non-technical aviation skills to operate effectively in a broad range of aerodrome operational roles.

Individuals working at this level will apply knowledge and skills to demonstrate autonomy and judgement and to take limited responsibility in known and stable contexts within established parameters.

This qualification forms some of the requirements for appointment in job roles by the aerodrome operator in accordance with Civil Aviation Safety Regulation (CASR) Part 139 Aerodromes.

Job roles may include:

- Aerodrome Reporting Officer
- Airport Safety Officer
- Airside Operations Officer
- Operations Officer
- Works Safety Officer (WSO)

Note: 'WSO' is defined as 'a person appointed in writing as a Works Safety Officer for ensuring the safe conduct of aerodrome works' (in accordance with CASR).

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **15 units of competency** comprising:

9 core units listed below **plus:**

6 general elective units from the general elective units listed below. **Up to 2 of the general elective units** may be selected from any relevant nationally endorsed Training Package or accredited course. The general elective units must contribute to the vocational outcomes of the qualification.

Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with.

Core units

AVIB0002	Inspect and report on aerodrome serviceability
AVIB0003	Inspect and report on serviceability of aerodrome lighting systems
AVIB0004	Inspect and report on obstacle limitation surfaces
AVIC0001	Drive on the airside
AVIE0004	Conduct radio procedures in an aviation operational environment
AVIF0035	Manage human factors in aviation operations
AVIF0034	Apply aviation work health and safety procedures
AVIF0045	Facilitate the safety of aerodrome work and work site access
AVIG0002	Lead a work team or group in a controlled environment

General Elective Units

AVIE0005	Complete a Notice to Airmen (NOTAM)
AVIF0023	Apply aircraft safety procedures
AVIF0026	Implement aviation risk management processes
AVIF0037	Monitor the transfer of hazardous materials
AVIF0043	Apply relevant laws and regulations to the operation of an aerodrome
AVIF0046	Facilitate an aerodrome emergency response
AVIL0006	Assess pavement concessions
AVIO0018	Use firearms on an aerodrome to control wildlife hazards
AVIO0019	Apply and monitor aviation workplace security procedures
AVIO0020	Monitor airside access and airside driving
AVIW0022	Coordinate aircraft movements and storage
AVIW0023	Implement wildlife hazard control measures
AVIW0033	Coordinate the removal of disabled aircraft
BSBFLM303	Contribute to effective workplace relationships
BSBFLM305	Support operational plan
BSBFLM306	Provide workplace information and resourcing plans

BSBFLM312	Contribute to team effectiveness
BSBSUS201	Participate in environmentally sustainable work practices
BSBWOR301	Organise personal work priorities and development
TLIO0001	Undertake emergency response action to a security threat

Qualification Mapping Information

This qualification replaces and is **not** equivalent to AVI30516 Certificate III in Aviation (Aerodrome Operations).

AVI30219 Certificate III in Aviation (Cabin Crew)

Modification History

Release 1. This is the first release of this qualification in the AVI Aviation Training Package

Qualification Description

This qualification reflects the roles of cabin crew personnel performing normal and emergency cabin crew duties in support of commercial or Defence aviation operations.

Cabin crew duties include applying technical and non-technical aviation skills and knowledge to cabin service and cargo operations.

This qualification forms some of the requirements for certification by the Civil Aviation Safety Authority (CASA) as a task specialist or other aerial work operations as directed by Civil Aviation Safety Regulation (CASR) Part 138 Aerial work operations.

Civil and military cabin crew seeking certification should check these requirements with CASA.

Occupations may include:

- Cabin Crew
- Crew Attendant
- Flight Attendant.

Entry Requirements

There are no entry requirements for this qualification.

However, first aid certification, a Responsible Service of Alcohol certificate and other regulatory requirements are essential for employment.

Packaging Rules

A total of **21 units of competency** comprising:

13 core units listed below **plus:**

8 general elective units from the general elective units listed below.

Up to 3 general elective units may be selected from any relevant nationally endorsed Training Package or accredited course. The general elective units must contribute to the vocational outcomes of the qualification.

Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with.

Core units

AVIB0001	Manage and carry out pre- and post-flight cabin checks
AVIF0023	Apply aircraft safety procedures
AVIF0034	Apply aviation work health and safety procedures
AVIF0041	Maintain the safety of people and aircraft
AVIF0042	Respond to abnormal and emergency situations in an aircraft
AVIG0003	Work effectively in the aviation industry
AVIO0017	Manage disruptive behaviour and unlawful interference with aviation
AVIO0019	Apply and monitor aviation workplace security procedures
AVIZ0004	Maintain security awareness and vigilance in an aviation workplace
BSBWOR301	Organise personal work priorities and development
TLIE3004	Prepare workplace documents
TLIF2018	Operate firefighting equipment
TLIO0001	Undertake emergency response action to a security threat

General elective units

AVIF0024	Provide first aid in an aviation environment
AVIF0026	Implement aviation risk management processes
AVIF0035	Manage human factors in aviation operations
AVIF0036	Implement regulations and policies during aviation safety and service operations
AVIF0038	Undertake aircraft underwater escape and survival
AVIF0040	Employ fatigue risk management practices in an aviation workplace
AVII0003	Advise on major services and attractions at aviation destinations
AVII0004	Provide quality customer service
AVII0005	Provide customer service on an aircraft
AVII0006	Carry out beverage service on an aircraft

AVII0007	Provide advice about cuisine on an aircraft
AVII0008	Conduct in-flight retailing
AVII0011	Carry out food preparation and service on an aircraft
AVII0012	Apply knowledge of the structure, products and services of an airline operator
AVII0013	Carry out aircraft business and first class meal and non-alcoholic beverage service
BSBFLM303	Contribute to effective workplace relationships
BSBFLM305	Support operational plan
BSBFLM306	Provide workplace information and resourcing plans
BSBFLM312	Contribute to team effectiveness
HLTAID003	Provide first aid
SITHFAB002	Provide responsible service of alcohol
TLIG3002	Lead a work team or group
TLII3020	Provide assistance to customers

Qualification Mapping Information

This qualification replaces but is equivalent to AVI30116 Certificate III in Aviation (Cabin Crew).

AVI30319 Certificate III in Aviation (Ground Operations and Service)

Modification History

Release 1. This is the first release of this qualification in the AVI Aviation Training Package.

Qualification Description

This qualification provides individuals with technical and non-technical aviation skills to operate effectively in a broad range of ground operations and service roles.

Individuals working at this level will apply knowledge and skills to demonstrate autonomy and judgement and to take limited responsibility in known and stable contexts within established parameters.

Licensing, legislative, regulatory and certification requirements that apply to this qualification can vary between states and territories. Compliance with these requirements may be required nationally and/or in various jurisdictions.

Job role types may include:

- Baggage Operator
- Customer Service Operator
- Ground Operator
- Ramp Operator

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **20 units of competency** comprising:

11 core units listed below, **plus**

9 general elective units from the general elective units listed below.

Up to **2 elective units** may be selected from any relevant nationally endorsed Training Package or accredited course. The elective units must contribute to the vocational outcomes of the qualification

Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with.

The following imported unit has a prerequisite unit:

- SITTTSL014 Construct advanced international airfares

Core units

AVIF0023	Apply aircraft safety procedures
AVIF0034	Apply aviation work health and safety procedures
AVIF0036	Implement regulations and policies during aviation safety and service operations
AVIF0020	Manage human factors and situation awareness in an aviation operational environment
AVIG0003	Work effectively in the aviation industry
AVIJ0001	Contribute to the achievement of on-time performance standards
AVIZ0004	Maintain security awareness and vigilance in an aviation workplace
TLIE0002	Process workplace documentation
TLIF3091	Apply awareness of dangerous goods and hazardous material requirements
TLIJ3002	Apply quality systems
TLIO0001	Undertake emergency response action to a security threat

General Elective Units

AVIC0001	Drive on the airside
AVID0003	Package dangerous goods for air transport
AVID0004	Conduct baggage handling operations
AVID0005	Accept dangerous goods for air transport
AVIE0003	Operate aeronautical radio
AVIE0004	Conduct radio procedures in an aviation operational environment
AVIF0025	Manage human factors in flight dispatch operations
AVIF0044	Marshal aircraft
AVIH0011	Manage aircraft performance and load
AVIH0012	Implement instrument flight rules planning procedures
AVII0003	Advise on major services and attractions at aviation destinations

AVII0004	Provide quality customer service
AVII0009	Check in aircraft passengers
AVII0010	Provide assistance to transit and arriving passengers
AVIL0003	Manage a check-in queue
AVIL0004	Complete aircraft dispatch duties
AVIL0005	Plan an aircraft load
AVIO0017	Manage disruptive behaviour and unlawful interference with aviation
AVIO0019	Apply and monitor aviation workplace security procedures
AVIR0001	Service customer airline contracts
AVIW0010	Operate an aerobridge
AVIW0011	Operate baggage tug
AVIW0012	Operate aircraft refuelling nozzle
AVIW0017	Operate aircraft embarkation and disembarkation equipment
AVIW0018	Operate ramp equipment
AVIW0019	Operate aircraft push-out tug
AVIW0020	Refuel aircraft
AVIW0021	Defuel aircraft
AVIW0022	Coordinate aircraft movements and storage
AVIW0031	Supervise aircraft refuelling
AVIY0042	Apply aeronautical knowledge and civil air law to flight dispatch operations
AVIY0043	Monitor flight performance
BSBCUS301	Deliver and monitor a service to customers
BSBFLM303	Contribute to effective workplace relationships
BSBFLM305	Support operational plan

BSBFLM306	Provide workplace information and resourcing plans
BSBFLM312	Contribute to team effectiveness
HLTAID003	Provide first aid
SITTTSL007	Process reservations
SITTTSL009	Process travel-related documentation
SITTTSL010	Use a computerised reservations or operations system
SITTTSL011	Source airfares for domestic flights
SITTTSL012	Construct normal international airfares
SITTTSL013	Construct promotional international airfares
SITTTSL014	Construct advanced international airfares └ SITTTSL012 Construct normal international airfares
TLIA1001	Secure cargo
TLIA3008	Transfer cargo
TLIA3015	Complete receipt/despatch documentation
TLIC3004	Drive heavy rigid vehicle
TLIC3005	Drive heavy combination vehicle
TLIC3042	Operate coach/bus
TLIC3063	Operate vehicle carrying special loads
TLID3015	Identify and label explosives/dangerous goods
TLIE3002	Estimate/calculate mass, area and quantify dimensions
TLIE3004	Prepare workplace documents
TLIE3012	Consolidate manifest documentation
TLIE3018	Maintain freight records
TLIG3002	Lead a work team or group
TLIK2010	Use info technology devices in the workplace
TLIP3034	Advise on and construct fares for customers

Qualification Mapping Information

This qualification replaces but is **not** equivalent to AVI30416 Certificate III in Aviation (Ground Operations and Service).

AVI30419 Certificate III in Aviation (Remote Pilot)

Modification History

Release 1. This is the first release of this qualification in the AVI Aviation Training Package.

Qualification Description

Remote pilots operating at this level will apply non-technical and technical knowledge and skills to demonstrate autonomy and judgement and will take limited responsibility in known and stable operational contexts within established regulatory parameters.

Licensing, legislative or certification requirements apply to this qualification at the time of publication. This qualification aligns to Remote Pilot Licensing requirements described in Civil Aviation Safety Regulation (CASR) Part 101 — Unmanned aircraft and rockets and Part 101 Manual of Standards.

Civil and military personnel seeking certification as remote pilots should check requirements with CASA.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A minimum of **14 units of competency** comprising:

9 core units listed below **plus**

2 elective units selected from the **Group A: General**, **plus**

At least **1 elective unit** selected from the **Group B: Specialist elective**, **plus**

At least **2 units** selected from the **Group C: Operation type elective units** listed below

The following units have a prerequisite unit:

- AVIY0025 Operate powered lift and tilt rotor remote pilot aircraft systems
- AVIY0029 Operate rotary wing remote pilot aircraft systems
- AVIY0030 Operate fixed wing remote pilot aircraft systems

Core units

AVIF0021 Manage human factors in remote pilot aircraft systems operations

AVIH0006 Navigate remote pilot aircraft systems

AVIW0028	Operate and manage remote pilot aircraft systems
AVIW0004	Perform operational inspections on remote operated systems
AVIY0052	Control remote pilot aircraft systems on the ground
AVIY0023	Launch, control and recover a remotely piloted aircraft
AVIY0053	Manage remote pilot aircraft systems energy source requirements
AVIY0031	Apply the principles of air law to remote pilot aircraft systems operations
AVIZ0005	Apply situational awareness in remote pilot aircraft systems operations.

Elective units

Group A General

AVIE0003	Operate aeronautical radio
AVIE0005	Complete a Notice to Airmen (NOTAM)
AVIF0023	Apply aircraft safety procedures
AVIF0034	Apply aviation work health and safety procedures
AVIG0003	Work effectively in the aviation industry
AVIY0032	Apply RPAS payload and configuration management principles
AVIZ0004	Maintain security awareness and vigilance in an aviation workplace

Group B Specialist elective

AVIY0024	Operate remote pilot airship
AVIY0025	Operate powered lift and tilt rotor remote pilot aircraft systems └ AVIW0028 Operate and manage remote pilot aircraft systems
AVIY0027	Operate multi-rotor remote pilot aircraft systems
AVIY0029	Operate rotary wing remote pilot aircraft systems └ AVIW0028 Operate and manage remote pilot aircraft systems
AVIY0030	Operate fixed wing remote pilot aircraft systems └ AVIW0028 Operate and manage remote pilot aircraft systems

Group C Operation type

AVIH0007	Operate remote pilot aircraft systems under night visual line of sight (NVLOS)
AVIH0008	Operate remote pilot aircraft systems extended visual line of sight (EVLOS)
AVIW0006	Perform infrastructure inspections using remote operated systems
AVIW0007	Perform aerial mapping and modelling using remote pilot aircraft systems
AVIW0008	Conduct aerial search using remote pilot aircraft systems
AVIW0009	Conduct aerial delivery-retrieval using remote pilot aircraft systems
AVIY0026	Conduct aerial application operations using remote pilot operated systems

Qualification Mapping Information

This qualification replaces and is **not** equivalent to AVI30316 Certificate III in Aviation (Remote Pilot - Visual Line of Sight).

AVI30519 Certificate III in Aviation (Rescue Crew Officer)

Modification History

Release 1. This is the first release of this qualification in the AVI Aviation Training Package.

Qualification Description

This qualification reflects the roles of flight crew personnel performing normal and emergency rescue crew duties in support of aviation operations.

Rescue crew duties include applying technical and non-technical aviation skills and knowledge within rotary wing operational environments.

This qualification forms some of the requirements for certification as flight crew by the Civil Aviation Safety Authority (CASA) as described in Civil Aviation Orders.

Rescue crew seeking authorisation as non-licensed personnel should check these requirements with CASA.

Occupations may include:

- Helicopter Crew Officer
- Rescue Crew Officer (RCO)
- Aviation Rescue Crew officer
- Down the Wire Crew officer
- Police, paramedics and other emergency service personnel

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **13 units of competency** comprising:

8 core units listed below **plus**

1 unit selected from **Group A** - Rescue operations; **plus**

1 unit selected from **Group B** - Search support functions; **plus**

remaining elective units to be selected from anywhere in this qualification.

Up to 2 elective units may be selected from any relevant nationally endorsed Training Package or accredited course. The elective units must contribute to the vocational outcomes of the qualification. Where imported units are selected, care must be taken to ensure all prerequisite units specified are complied with.

The following imported unit has a prerequisite unit:

- PUAFIR211 Undertake hover-exit operations from helicopter

Core units

AVIF0023	Apply aircraft safety procedures
AVIF0038	Undertake aircraft underwater escape and survival
AVIF0040	Employ fatigue risk management practices in an aviation workplace
AVIF0041	Maintain the safety of people and aircraft
AVIF0042	Respond to abnormal and emergency situations in an aircraft
AVIW0025	Complete aircraft and flight equipment pre- and post-flight actions
AVIZ0003	Maintain basic situational awareness in an aviation workplace
PUAFIR209	Work safely around aircraft

Elective units

Group A - Rescue Operations

AVIW0013	Be airborne extracted by suspended rope
AVIW0014	Be airborne extracted using suspended extraction equipment
AVIW0015	Fast rope from a helicopter
AVIW0016	Rappel from a helicopter
AVIW0024	Perform down the wire duties
AVIW0003	Undertake helicopter aquatic rescue and recovery

Group B - Search support functions

AVIW0026	Conduct night vision imaging system operations
AVIW0027	Deliver pyrotechnics and handheld stores
HLTAID007	Provide advanced resuscitation
PUAAMS002	Search as a member of an air search team

General elective units

AVIE0003	Operate aeronautical radio
----------	----------------------------

AVIE0006	Maintain aircraft radio communications
AVIF0026	Implement aviation risk management processes
AVIF0035	Manage human factors in aviation operations
AVIF0039	Utilise emergency breathing system
AVIF0044	Marshal aircraft
AVIW0020	Refuel aircraft
AVIW0030	Manage aircraft sensor systems
AVIY0040	Apply aeronautical knowledge to aviation operations
AVIY0051	Conduct helicopter landing site and unprepared helicopter landing site operations
AVIY0065	Conduct external load-lift operations
AVIY0066	Conduct hoisting operations
HLTAID003	Provide first aid
PUAFIR211	Undertake hover-exit operations from helicopter └ PUAFIR209 Work safely around aircraft
TLIA1001	Secure cargo
TLID2003	Handle dangerous goods/hazardous substances
TLIO1002	Follow security procedures when working with passengers and personnel

Qualification Mapping Information

This qualification replaces but is **not** equivalent to AVI30216 Certificate III in Aviation (Rescue Crewman).

AVI40119 Certificate IV in Aviation (Air Crew Officer)

Modification History

Release 1. This is the first release of this qualification in the AVI Aviation Training Package.

Qualification Description

This qualification reflects the roles of flight crew personnel performing normal and emergency air crew officer duties in support of commercial or Defence aviation operations.

Air crew officer duties include applying technical and non-technical aviation skills and knowledge within rotary wing operational environments.

Individuals working at this level will apply knowledge and skills to demonstrate autonomy, judgement and limited responsibility in known or changing contexts within established parameters.

This qualification forms some of the requirements for certification by the Civil Aviation Safety Authority (CASA) as a task specialist or other aerial work operations as directed by Civil Aviation Safety Regulation (CASR) Part 138 Aerial work operations.

Civil and military flight crew seeking authorisation for aerial work operations should check these requirements with CASA.

Occupations include:

- Air Crew Officer (ACO)

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **21 units of competency** comprising:

14 core units listed below **plus:**

7 general elective units from the general elective units listed below.

Up to 2 elective units may be selected from any relevant nationally endorsed Training Package or accredited course. The elective units must contribute to the vocational outcomes of the qualification.

Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with.

Core units

AVIF0023	Apply aircraft safety procedures
AVIF0026	Implement aviation risk management processes
AVIF0035	Manage human factors in aviation operations
AVIF0038	Undertake aircraft underwater escape and survival
AVIF0041	Maintain the safety of people and aircraft
AVIF0042	Respond to abnormal and emergency situations in an aircraft
AVIO0017	Manage disruptive behaviour and unlawful interference with aviation
AVIW0025	Complete aircraft and flight equipment pre- and post-flight actions
AVIY0051	Conduct helicopter landing site and unprepared helicopter landing site operations
AVIZ0003	Maintain basic situational awareness in an aviation workplace
BSBMGT405	Provide personal leadership
TLIA1001	Secure cargo
TLID2003	Handle dangerous goods/hazardous substances
TLIE3002	Estimate/calculate mass, area and quantify dimensions
General elective units	
AVIE0003	Operate aeronautical radio
AVIE0005	Complete a Notice to Airmen (NOTAM)
AVIE0006	Maintain aircraft radio communications
AVIF0024	Provide first aid in an aviation environment
AVIF0027	Implement aviation fatigue risk management processes
AVIF0039	Utilise emergency breathing system
AVIF0044	Marshal aircraft
AVIJ0002	Conduct quality control operations related to refuelling and defuelling aircraft
AVIL0005	Plan an aircraft load
AVIW0020	Refuel aircraft

AVIW0024	Perform down the wire duties
AVIW0026	Conduct night vision imaging system operations
AVIW0027	Deliver pyrotechnics and handheld stores
AVIW0030	Manage aircraft sensor systems
AVIY0040	Apply aeronautical knowledge to aviation operations
AVIY0041	Apply the principles of civil air law to aviation operations
AVIY0065	Conduct external load-lift operations
AVIY0066	Conduct hoisting operations
AVIY0067	Conduct airborne extraction operations
AVIY0068	Conduct airborne rappelling operations
AVIW0034	Perform non-pilot cockpit duties
HLTAID007	Provide advanced resuscitation
TLIO1002	Follow security procedures when working with passengers and personnel

Qualification Mapping Information

This qualification replaces and is equivalent to AVI40116 Certificate IV in Aviation (Air Crew Officer).

AVI40219 Certificate IV in Aviation (Aviation Supervision)

Modification History

Release 1. This is the first release of this qualification in the AVI Aviation Training Package.

Qualification Description

This qualification provides individuals with technical and non-technical aviation skills to operate effectively in a broad range of ground operations and service roles.

Individuals working at this level will apply knowledge and skills to demonstrate autonomy and judgement and to take limited responsibility in known and stable contexts within established parameters.

Licensing, legislative, regulatory and certification requirements that apply to this qualification can vary between states and territories. Compliance with these requirements may be required nationally and/or in various jurisdictions.

Use for Defence Aviation is to be in accordance with relevant Defence Orders, Instructions, Publications and Regulations.

Occupations may include:

- Aerodrome Operations Supervisor
- Aviation Supervisor
- Cabin Service Supervisor
- Cargo Service Supervisor
- Customer Service Supervisor
- Ramp Operations Supervisor.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total **23 units of competency** comprising:

13 core units listed below **plus**

10 general elective units from the general elective units listed below. The general elective units must contribute to the vocational outcomes of the qualification.

Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with.

Core units

AVIF0026	Implement aviation risk management processes
AVIF0027	Implement aviation fatigue risk management processes
AVIF0035	Manage human factors in aviation operations
AVIL0002	Manage shifts, crewing and rostering activities in aviation
BSBLDR403	Lead team effectiveness
BSBMGT401	Show leadership in the workplace
BSBMGT402	Implement operational plan
BSBWHS401	Implement and monitor WHS policies, procedures and programs to meet legislative requirements
TLIE4006	Collect, analyse and present workplace data and information
TLIF4014	Develop and maintain a safe workplace
TLIG4006	Facilitate work teams
TLIL4009	Manage personal work priorities and professional development
TLIL4033	Promote effective workplace practice

General elective units

AVIB0002	Inspect and report on aerodrome serviceability
AVIB0003	Inspect and report on serviceability of aerodrome lighting systems
AVIB0004	Inspect and report on obstacle limitation surfaces
AVIC4002	Administer airside driving
AVIE0003	Operate aeronautical radio
AVIF0023	Apply aircraft safety procedures
AVIF0029	Implement threat and error management strategies
AVIF0033	Manage aircraft passengers and cargo
AVIF0034	Apply aviation work health and safety procedures
AVIF0041	Maintain the safety of people and aircraft
AVIF0042	Respond to abnormal and emergency situations in an aircraft

AVIF0043	Apply relevant laws and regulations to the operation of an aerodrome
AVIF0045	Facilitate the safety of aerodrome works and works site access
AVIF0046	Facilitate an aerodrome emergency response
AVIF4008	Supervise cabin safety and security
AVIG2003	Work in a socially diverse environment
AVII0013	Carry out aircraft business and first class meal and non-alcoholic beverage service
AVII4013	Supervise cabin operations
AVII4015	Monitor and enhance customer service excellence
AVIJ0002	Conduct quality control operations related to refuelling and defuelling aircraft
AVIL0005	Plan an aircraft load
AVIL0006	Assess pavement concessions
AVIO0007	Control access to and exit from a security sensitive area
AVIO4003	Implement airside access
AVIW0023	Implement wildlife hazard control measures
AVIW0031	Supervise aircraft refuelling
AVIW0033	Coordinate the removal of disabled aircraft
BSBAUD402	Participate in a quality audit
BSBHRM405	Support the recruitment, selection and induction of staff
BSBMGT502	Manage people performance
BSBPMG410	Apply project time management techniques
BSBWOR502	Lead and manage team effectiveness
HLTAID003	Provide first aid
HLTAID006	Provide advanced first aid
HLTAID007	Provide advanced resuscitation
TLIA2011	Package goods

TLIA3002	Maintain container/cargo records
TLIA4005	Check and evaluate records and documentation
TLIA4025	Regulate temperature controlled stock
TLIA0002	Prepare cargo for export
TLIA4031	Consolidate freight
TLIA4032	Organise transport of freight or goods
TLIA4033	Organise international transport of freight
TLIC4006	Drive multi-combination vehicle
TLIE4013	Apply workplace statistics
TLIF4007	Implement and coordinate accident-emergency procedures
TLIF4064	Manage fatigue management policy and procedures
TLII4001	Coordinate quality customer service
TLII4005	Market services and products to clients
TLIJ5007	Conduct internal quality audits
TLIL4005	Apply conflict/grievance solution strategies
TLIL4010	Assess and confirm customer transport requirements
TLIL4032	Implement equal employment equity strategies
TLIO0001	Undertake emergency response action to a security threat
TLIP4001	Develop plans to meet customer and organisation needs
TLIP4002	Facilitate and capitalise on change in the workplace
TLIP4005	Manage workplace information
TLIP4031	Maintain customer credit accounts and services
TLIP5007	Contribute to the development of a workplace learning environment
TLIR4001	Monitor supplier performance
TLIR4002	Source goods/services and evaluate contractors
TLIR4003	Negotiate a contract

TLIU4001 Implement and monitor environmental protection policies and procedures

TLIU5006 Conduct environmental audits

Qualification Mapping Information

This qualification replaces and is equivalent to AVI40216 Certificate IV in Aviation (Aviation Supervision).

AVI40319 Certificate IV in Aviation (Flight Operations Supervision)

Modification History

Release 1. This is the first release of this qualification in the AVI Aviation Training Package.

Qualification Description

Individuals working at this level will apply knowledge and skills to demonstrate autonomy and judgement, and to take limited responsibility in known and stable contexts within established parameters.

Licensing, legislative, regulatory and certification requirements that apply to this qualification can vary between states and territories. Compliance with these requirements may be required nationally and/or in various jurisdictions.

Occupations include:

- Flight Operations Officer
- Flight Operations Supervisor.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **23 units of competency** comprising:

23 core units listed below

Core units

AVID0005	Accept dangerous goods for air transport
AVIE0003	Operate aeronautical radio
AVIF0025	Manage human factors in flight dispatch operations
AVIF0026	Implement aviation risk management processes
AVIF0027	Implement aviation fatigue risk management processes
AVIH0011	Manage aircraft performance and load

AVIH0012	Implement instrument flight rules planning procedures
AVIL0002	Manage shifts, crewing and rostering activities in aviation
AVIO0019	Apply and monitor aviation workplace security procedures
AVIY0042	Apply aeronautical knowledge and civil air law to flight dispatch operations
AVIY0043	Monitor flight performance
AVIZ0004	Maintain security awareness and vigilance in an aviation workplace
BSBLDR403	Lead team effectiveness
BSBMGT401	Show leadership in the workplace
BSBMGT402	Implement operational plan
BSBWHS401	Implement and monitor WHS policies, procedures and programs to meet legislative requirements
TLIE4006	Collect, analyse and present workplace data and information
TLIF4014	Develop and maintain a safe workplace
TLIF4064	Manage fatigue management policy and procedures
TLIG4006	Facilitate work teams
TLIL4009	Manage personal work priorities and professional development
TLIL4033	Promote effective workplace practice
TLIP4002	Facilitate and capitalise on change in the workplace

Qualification Mapping Information

This qualification replaces and is equivalent to AVI40316 Certificate IV in Aviation (Flight Operations Supervision).

AVI40419 Certificate IV in Aviation (Remote Pilot-Beyond Visual Line of Sight)

Modification History

Release 1. This is the first release of this qualification in the AVI Aviation Training Package.

Qualification Description

This qualification is relevant to individuals operating remotely piloted aircraft systems (RPAS) beyond visual line of sight (BVLOS) in compliance with relevant regulatory requirements and national operating standards.

Remote pilots operating at this level will apply advanced technical and non-technical knowledge and skills to demonstrate autonomy and judgement and will take limited responsibility in known and stable operational contexts within established regulatory parameters.

Licensing, legislative or certification requirements apply to this qualification at the time of publication. This qualification aligns to Remote Pilot Licensing requirements described in Civil Aviation Safety Regulation (CASR) Part 101 — Unmanned aircraft and rockets and Part 101 Manual of Standards.

Entry Requirements

Individuals undertaking this qualification must have the AVI30419 Certificate III in Aviation (Remote Pilot) or equivalent.

Packaging Rules

A total of **10 units** of competency comprising:

10 core units listed below

Core units

AVIE0004 Conduct radio procedures in an aviation operational environment

AVIE0002 Maintain airspace interactions in remote pilot aircraft systems
BVLOS operations

AVIF0016 Manage network data links

AVIF0017 Develop a risk management plan for beyond visual line of sight
operations

AVIF0018 Manage risks with unmanned aerial systems (UAS) beyond visual

	line of sight (BVLOS)
AVIF0019	Implement complex human factors in remote pilot aircraft systems beyond visual line of sight (BVLOS)
AVIF0022	Maintain work health and safety procedures in remote pilot aircraft systems
AVIW0001	Operate and manage advanced remote pilot aircraft systems.
AVIW0002	Manage multi-crew operation in beyond visual line of sight (BVLOS) operations
AVIW0005	Determine meteorological factors for remote pilot aircraft operations

Qualification Mapping Information

No equivalent qualification.

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

AVI50115 Diploma of Aviation (Air Traffic Control)

Modification History

Release 2. ISC upgrade - a statement relevant to Defence Aviation has been modified in the Qualification Description.

Release 1. This is the first release of this qualification in the AVI Aviation Training Package.

Qualification Description

This is a specialist qualification for Air Traffic Controllers in the Australian aviation industry. Graduates at this level will have technical and theoretical knowledge in aviation and air traffic control (ATC).

Graduates at this level will also have a broad range of cognitive, technical and communication skills to select and apply methods and technologies to:

- analyse information to complete a range of activities
- provide and transmit solutions to sometimes complex problems
- transmit information and skills to others
- support others to develop aviation and ATC skills.

Graduates at this level will apply knowledge and skills to demonstrate autonomy, judgement and defined responsibility in known or changing contexts and within broad but established parameters.

Work in civilian air traffic environments must be carried out in compliance with the relevant air traffic services Civil Aviation Safety Authority (CASA) regulatory requirements and national operating standards.

This qualification is aligned to the Civil Aviation Safety Regulations CASR Part 65 Manual of Standards (MOS) ATC licencing requirements. Personnel seeking certification as an Air Traffic Controller are to apply to CASA in accordance with existing licencing procedures.

Use for Defence Aviation is to be in accordance with relevant Defence Orders, Instructions, Publications and Regulations.

Occupations include:

Aerodrome Controllers

Enroute Controllers

Approach Controllers.

Entry Requirements

Entrants to this qualification must possess the minimum entry requirements determined by CASA for ATC licencing purposes or Defence Air Traffic Controller entry standards.

Packaging Rules

A total of **7 units of competency** comprising:

6 core units listed below **plus**

1 general elective unit from the general elective units listed below.

Core units

AVIE5002 Apply air traffic control communication procedures and services

AVIF5003 Manage human performance and team resources during air traffic control operations

AVIF5013 Provide search and rescue alerting and emergency response

AVIW5013 Operate air traffic control equipment and workstations

AVIY5022 Manage traffic flow

AVIZ5049 Manage situational awareness in the air traffic control environment

General elective units

AVIY5048 Provide approach control services

AVIY5049 Provide area control services

AVIY5050 Provide aerodrome control services

Qualification Mapping Information

This qualification replaces and is equivalent to AVI50308 Diploma of Aviation (Air Traffic Control).

Companion Volume implementation guides are found in VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

AVI50119 Diploma of Aviation (Aviation Management)

Modification History

Release 1. This is the first release of this qualification in the AVI Aviation Training Package.

Qualification Description

This qualification reflects the roles of aviation management personnel performing ground operations duties in support of commercial or Defence aviation flight operations.

Aviation management duties include applying technical and non-technical aviation skills and knowledge in support of a wide range of aerodrome and air transport operations, including passenger, charter, cargo, emergency service and government operations.

Individuals working at this level will apply knowledge and skills to demonstrate autonomy, judgement and defined responsibility in known or changing contexts within broad but established parameters.

Licensing, legislative, regulatory and certification requirements that apply to this qualification can vary between states and territories. Compliance with these requirements may be required nationally and/or in various jurisdictions.

Use for Defence Aviation is to be in accordance with relevant Defence Orders, Instructions, Publications and Regulations.

Occupations may include:

- Aerodrome Manager
- Aviation Manager
- Business Manager
- Operations Manager
- Safety Manager.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **24 units of competency** comprising:

10 core units listed below **plus**

14 general elective units from the general elective units listed below. **Up to 4 of the general elective units** may be selected with appropriate contextualisation from a qualification in this or any other endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification.

Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with.

Core units

AVIF0026	Implement aviation risk management processes
AVIF0027	Implement aviation fatigue risk management processes
AVIF0028	Manage aviation risk
AVIO0017	Manage disruptive behaviour and unlawful interference with aviation
BSBADM502	Manage meetings
BSBAUD501	Initiate a quality audit
BSBLDR511	Develop and use emotional intelligence
BSBLDR502	Lead and manage effective workplace relationships
BSBMGT517	Manage operational plan
BSBWOR502	Lead and manage team effectiveness

General elective units

AVIF0043	Apply relevant laws and regulations to the operation of an aerodrome
AVIF0046	Facilitate an aerodrome emergency response
AVIL0002	Manage shifts, crewing and rostering activities in aviation
AVIO0007	Control access to and exit from a security sensitive area
AVIO2013	Undertake emergency response action to a security threat
BSBAUD503	Lead a quality audit
BSBCUS501	Manage quality customer service
BSBHRM506	Manage recruitment selection and induction processes
BSBHRM513	Manage workforce planning
BSBINM501	Manage an information or knowledge management system
BSBLDR802	Lead the strategic planning process for an organisation
BSBMGT502	Manage people performance

BSBMGT516	Facilitate continuous improvement
BSBPUB501	Manage the public relations publication process
BSBPRC502	Manage supplier relationships
BSBSUS501	Develop workplace policy and procedures for sustainability
BSBWHS501	Ensure a safe workplace
BSBWOR501	Manage personal work priorities and professional development
PSPGEN049	Undertake negotiations
PSPPCM011	Plan to manage a contract
PUACOM005	Foster a positive organisational image in the community
PUACOM007	Liaise with other organisations
PUAEMR008	Contribute to an emergency risk management process
PUAEMR013	Design emergency management exercises

Qualification Mapping Information

This qualification replaces and is equivalent to AVI50616 Diploma of Aviation (Aviation Management).

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

AVI50219 Diploma of Aviation (Commercial Pilot Licence - Aeroplane)

Modification History

Release 1. This is the first release of this qualification in the AVI Aviation Training Package.

Qualification Description

This qualification reflects the roles of flight crew personnel performing normal and emergency commercial pilot duties in support of commercial or Defence aviation flight operations.

Flight crew duties include applying technical and non-technical aviation skills and knowledge to a wide range of air transport operations, including passenger, charter and cargo operations.

Individuals working at this level will apply knowledge and skills to demonstrate autonomy, judgement and defined responsibility in known or changing contexts and within broad but established parameters.

This qualification forms some of the requirements for certification as a commercial pilot by the Civil Aviation Safety Authority (CASA) as directed by Civil Aviation Safety Regulation (CASR) Part 61 Flight crew licensing.

People seeking certification should check these requirements with CASA.

Occupations include:

- Commercial aeroplane pilot
- Military aeroplane pilot.

Entry Requirements

Commercial or military pilot entrants to this qualification should check requirements with CASA or Defence Aviation for specific pilot entry standards.

Packaging Rules

A total of **29 units of competency** comprising:

28 core units listed below **plus**

1 general elective unit from the general elective units listed below. The general elective unit must contribute to the vocational outcomes of the qualification.

Core units

AVIE0006 Maintain aircraft radio communications

AVIF0026	Implement aviation risk management processes
AVIF0027	Implement aviation fatigue risk management processes
AVIF0029	Implement threat and error management strategies
AVIF0030	Manage safe flight operations
AVIF0033	Manage aircraft passengers and cargo
AVIF0035	Manage human factors in aviation operations
AVIH0010	Plan a flight under visual flight rules
AVIH0014	Navigate aircraft under visual flight rules
AVILIC0003	Licence to operate a commercial aeroplane
AVIO0017	Manage disruptive behaviour and unlawful interference with aviation
AVIW0029	Manage pre- and post-flight actions
AVIW0032	Operate and manage aircraft systems
AVIY0033	Operate aircraft using aircraft flight instruments
AVIY0034	Operate in controlled airspace
AVIY0035	Operate in Class G airspace
AVIY0036	Operate at non-towered aerodromes
AVIY0037	Operate at a controlled aerodrome
AVIY0040	Apply aeronautical knowledge to aviation operations
AVIY0041	Apply the principles of civil air law to aviation operations
AVIY0046	Execute advanced aeroplane manoeuvres and procedures
AVIY0047	Manage abnormal aeroplane flight situations
AVIY0054	Control aeroplane on the ground
AVIY0055	Take off aeroplane
AVIY0056	Control aeroplane in normal flight
AVIY0057	Land aeroplane
AVIY0058	Manage aircraft fuel

AVIZ0006 Manage situational awareness in aircraft flight

General elective units

AVIF0023 Apply aircraft safety procedures

AVIH0015 Plan a flight under night visual flight rules

AVIH0016 Navigate aircraft under night visual flight rules

AVIN0003 Command an aircraft in a multi-crew environment

AVIN0004 Supervise and manage safe flight operations as pilot in command

AVIW0026 Conduct night vision imaging system operations

AVIY0038 Operate aeroplane at low level

AVIY0039 Conduct aerial application operations

AVIY0073 Operate aircraft in the traffic pattern at night

AVIZ0002 Maintain and manage situational awareness as pilot in command

Qualification Mapping Information

This qualification replaces and is equivalent to AVI50215 Diploma of Aviation (Commercial Pilot Licence – Aeroplane).

AVI50319 Diploma of Aviation (Commercial Pilot Licence - Helicopter)

Modification History

Release 1. This is the first release of this qualification in the AVI Aviation Training Package.

Qualification Description

This qualification reflects the roles of flight crew personnel performing normal and emergency commercial pilot duties in support of commercial or Defence aviation flight operations.

Flight crew duties include applying technical and non-technical aviation skills and knowledge to a wide range of air transport operations, including passenger, charter and cargo operations.

Individuals working at this level will apply knowledge and skills to demonstrate autonomy, judgement and defined responsibility in known or changing contexts and within broad but established parameters.

This qualification forms some of the requirements for certification as a commercial pilot by the Civil Aviation Safety Authority (CASA) as directed by Civil Aviation Safety Regulation (CASR) Part 61 Flight crew licensing.

People seeking certification should check these requirements with CASA.

Occupations include:

- Commercial helicopter pilot
- Military helicopter pilot.

Entry Requirements

Commercial or military pilot entrants to this qualification should check requirements with CASA or Defence Aviation for specific pilot entry standards.

Packaging Rules

A total of **29 units of competency** comprising:

28 core units listed below **plus**

1 general elective unit from the general elective units listed below. The general elective unit must contribute to the vocational outcomes of the qualification.

Core units

AVIE0006 Maintain aircraft radio communications

AVIF0026	Implement aviation risk management processes
AVIF0027	Implement aviation fatigue risk management processes
AVIF0029	Implement threat and error management strategies
AVIF0030	Manage safe flight operations
AVIF0033	Manage aircraft passengers and cargo
AVIF0035	Manage human factors in aviation operations
AVIH0010	Plan a flight under visual flight rules
AVIH0014	Navigate aircraft under visual flight rules
AVILIC0004	Licence to operate a commercial helicopter
AVIO0017	Manage disruptive behaviour and unlawful interference with aviation
AVIW0029	Manage pre- and post-flight actions
AVIW0032	Operate and manage aircraft systems
AVIY0034	Operate in controlled airspace
AVIY0035	Operate in Class G airspace
AVIY0036	Operate at non-towered aerodromes
AVIY0037	Operate at a controlled aerodrome
AVIY0040	Apply aeronautical knowledge to aviation operations
AVIY0041	Apply the principles of civil air law to aviation operations
AVIY0048	Taxi helicopter
AVIY0058	Manage aircraft fuel
AVIY0059	Control helicopter on the ground
AVIY0060	Control helicopter in hovering flight
AVIY0061	Take off helicopter and approach to hover
AVIY0062	Control helicopter in normal flight
AVIY0063	Execute advanced helicopter manoeuvres and procedures
AVIY0064	Manage abnormal and emergency helicopter flight situations

AVIZ0006 Manage situational awareness in aircraft flight

General elective units

AVIF0023	Apply aircraft safety procedures
AVIF0038	Undertake aircraft underwater escape and survival
AVIH0015	Plan a flight under night visual flight rules
AVIH0016	Navigate aircraft under night visual flight rules
AVIN0003	Command an aircraft in a multi-crew environment
AVIN0004	Supervise and manage safe flight operations as pilot in command
AVIW0026	Conduct night vision imaging system operations
AVIY0033	Operate aircraft using aircraft flight instruments
AVIY0039	Conduct aerial application operations
AVIY0049	Operate helicopter at low level
AVIY0069	Pilot a helicopter during external load operations
AVIY0070	Pilot a helicopter during rappelling operations
AVIY0071	Pilot a helicopter during hoisting operations
AVIY0073	Operate aircraft in the traffic pattern at night
AVIZ0002	Maintain and manage situational awareness as pilot in command
HLTAID002	Provide basic emergency life support

Qualification Mapping Information

This qualification replaces and is equivalent to AVI50315 Diploma of Aviation (Commercial Pilot Licence – Helicopter).

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

AVI50419 Diploma of Aviation (Flight Instructor)

Modification History

Release 1. This is the first release of this qualification in the AVI Aviation Training Package.

Qualification Description

This qualification reflects the roles of individuals delivering training and assessment services usually within aviation Registered Training Organisations (RTOs) or flight training organisations.

This qualification is also suitable preparation for those engaged in the delivery of training and assessment of competence in an aviation workplace context, as a component of a structured vocational education and training (VET) program.

Flight instruction duties include applying technical and non-technical aviation and vocational skills and knowledge to a wide range of learners, operating conditions and aviation environments.

Individuals working at this level will apply knowledge and skills to demonstrate autonomy, judgement and defined responsibility in known or changing contexts within broad but established parameters.

This qualification forms some of the requirements for certification as a flight instructor by the Civil Aviation Safety Authority (CASA) as directed by Civil Aviation Safety Regulation (CASR) Part 61 Flight crew licensing.

People seeking certification should check these requirements with CASA.

Occupations include:

- Flight Instructor – Grade 3
- Flight Instructor – Grade 2
- Qualified Flying Instructor - Military

Entry Requirements

Commercial or military pilot entrants to this qualification should check requirements with CASA or Defence Aviation for certification and/or flight hour requirements or be able to demonstrate equivalent competence.

Packaging Rules

A total of **17 units of competency** comprising:

12 core units listed below **plus**

5 general elective units from the general elective units listed below.

Selection of elective units for use within an RTO must be consistent with these packaging rules and mandatory requirements of the Standards for Registered Training Organisations.

Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with.

Core units

AVIM0003	Conduct aeronautical knowledge training and flight training
AVIM0004	Conduct training for the issue of an endorsement
AVIM0005	Facilitate non-technical skills instruction
TAEASS401	Plan assessment activities and processes
TAEASS402	Assess competence
TAEASS403	Participate in assessment validation
TAEASS502	Design and develop assessment tools
TAEDEL401	Plan, organise and deliver group-based learning
TAEDEL402	Plan, organise and facilitate learning in the workplace
TAEDES401	Design and develop learning programs
TAEDES402	Use training packages and accredited courses to meet client needs
TAELLN411	Address adult language, literacy and numeracy skills

General elective units

AVIF0026	Implement aviation risk management processes
AVIF0027	Implement aviation fatigue risk management processes
AVIM0007	Plan and conduct multi-crew cooperation training
AVIM0008	Operate a simulator
AVIM0009	Facilitate training in a synthetic environment
AVIM0010	Conduct flight review
BSBAUD402	Participate in a quality audit
BSBCM401	Make a presentation
BSBLED401	Develop teams and individuals

BSBMKG413	Promote products and services
BSBREL402	Build client relationships and business networks
BSBRES411	Analyse and present research information
TAEASS301	Contribute to assessment
TAEDEL301	Provide work skill instruction
TAEDEL403	Coordinate and facilitate distance-based learning
TAEDEL404	Mentor in the workplace
TAEDEL501	Facilitate e-learning
TAELLN412	Access resources and support to address foundation skills in vocational practice
TAELLN413	Integrate foundation skills into vocational training delivery
TAETAS401	Maintain training and assessment information
TLIL4005	Apply conflict/grievance resolution strategies

Qualification Mapping Information

This qualification replaces and is **not** equivalent to AVI50516 Diploma of Aviation (Flight Instructor).

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

AVI50519 Diploma of Aviation (Instrument Rating)

Modification History

Release 1. This is the first release of this qualification in the AVI Aviation Training Package.

Qualification Description

This qualification reflects the roles of flight crew personnel operating in support of commercial or Defence aviation flight operations.

Flight crew duties include applying technical and non-technical aviation skills and knowledge to a wide range of air transport operations, including passenger, charter and cargo operations while operating aeroplanes or helicopters under the instrument flight rules (IFR).

Individuals working at this level will apply knowledge and skills to demonstrate autonomy, judgement and defined responsibility in known or changing contexts within broad but established parameters.

This qualification forms some of the requirements for an instrument rating certification by the Civil Aviation Safety Authority (CASA) as directed by Civil Aviation Safety Regulation (CASR) Part 61 Flight crew licensing.

People seeking certification should check these requirements with CASA.

Occupations include:

- Commercial Aeroplane Pilot
- Commercial Helicopter Pilot
- Military Aeroplane Pilot
- Military Helicopter Pilot

Entry Requirements

Commercial or military pilot entrants to this qualification should check requirements with CASA or Defence Aviation for certification and/or flight hour requirements.

Packaging Rules

A total of **14 units of competency** comprising:

13 core units listed below **plus**

1 specialist elective unit from the specialist elective units listed below. The specialist elective unit must contribute to the vocational outcomes of the qualification.

Core units

AVIF0029	Implement threat and error management strategies
AVIF0030	Manage safe flight operations
AVIH0013	Plan a flight under instrument flight rules
AVIH0017	Navigate aircraft under instrument flight rules
AVIW0032	Operate and manage aircraft systems
AVIY0033	Operate aircraft using aircraft flight instruments
AVIY0044	Conduct a 2D instrument approach
AVIY0050	Perform instrument arrival and standard arrival route procedures
AVIY0073	Operate aircraft in the traffic pattern at night
AVIY0074	Perform non-published instrument departure procedures
AVIY0075	Perform published instrument departure procedures
AVIY0076	Perform visual circling approach
AVIY0081	Conduct a 2D global navigation satellite system non-precision instrument approach

Specialist elective units

AVIH0015	Plan a flight under night visual flight rules
AVIH0016	Navigate aircraft under night visual flight rules
AVIY0045	Conduct a 3D instrument approach
AVIY0072	Operate a multi-engine aeroplane
AVIY0077	Conduct a 2D non-directional beacon instrument approach
AVIY0078	Conduct a 2D very high frequency omni-directional radio range instrument approach
AVIY0079	Conduct a 3D instrument landing system instrument approach
AVIY0080	Conduct a 2D distance measuring equipment global navigation satellite system instrument approach
AVIY0082	Operate a multi-engine helicopter

Qualification Mapping Information

This qualification replaces and is equivalent to AVI50415 Diploma of Aviation (Instrument Rating).

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

AVI60119 Advanced Diploma of Aviation (Chief Flight Instructor)

Modification History

Release 1. This is the first release of this qualification in the AVI Aviation Training Package.

Qualification Description

This qualification reflects the roles of experienced flight instructors delivering training and assessment services usually within aviation Registered Training Organisations (RTOs) or flight training organisations. They may have a role in leading other flight instructors and flight examiners, and in providing mentoring or advice to new flight instructors and flight examiners, as well as designing approaches to learning and assessment strategies across a significant area within the flight training organisation.

Flight instruction duties include applying technical and non-technical aviation and vocational skills and knowledge involving a wide range of learners, operating conditions and aviation environments.

Individuals working at this level will apply knowledge and skills to demonstrate autonomy, judgement and defined responsibility in known or changing contexts within broad but established parameters.

This qualification forms some of the requirements for certification as a flight instructor by the Civil Aviation Safety Authority (CASA) as directed by Civil Aviation Safety Regulation (CASR) Part 61 Flight crew licensing.

People seeking certification should check these requirements with CASA.

Occupations include:

- Flight Instructor – Grade 1
- Chief Flight Instructor (CFI)
- Chief Pilot (CP)
- Flight Examiner (FE)
- Head of Operations (HOO)
- Qualified Flying Instructor - Military

Entry Requirements

Entrants to this qualification should check requirements with CASA for certification and/or flight hour requirements or be able to demonstrate equivalent competence.

Packaging Rules

A total of **16 units of competency** comprising:

11 core units listed below **plus**;

5 general elective units from the general elective units listed below.

Selection of elective units for use within an RTO must be consistent with these packaging rules and mandatory requirements of the Standards for Registered Training Organisations.

Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with.

Core units

AVIF0028	Manage aviation risk
AVIL0002	Manage shifts, crewing and rostering activities in aviation
AVIM0006	Conduct a flight test
AVIM0011	Deliver operational flight management training
AVIN0005	Manage flight training
TAEASS501	Provide advanced assessment practice
TAEASS502	Design and develop assessment tools
TAEDEL502	Provide advanced facilitation practice
TAEDES501	Design and develop learning strategies
TAE LLN501	Support the development of adult language, literacy and numeracy skills
TAE PDD501	Maintain and enhance professional practice

General elective units

AVIF0026	Implement aviation risk management processes
AVIF0027	Implement aviation fatigue risk management processes
AVIM0008	Operate a simulator
AVIM0009	Facilitate training in a synthetic environment
TAEASS503	Lead assessment validation processes
TAEASS504	Develop and implement recognition strategies

TAEDEL501	Facilitate e-learning
TAEDES502	Design and develop learning resources
TAEDES503	Design and develop e-learning resources
TAEDES504	Research and develop units of competency
TAEDES505	Evaluate a training program
TAEICR501	Work in partnership with industry, enterprises and community groups
TAELLN411	Address adult language, literacy and numeracy skills
TAELLN412	Access resources and support to address foundation skills in vocational practice
TAELLN413	Integrate foundation skills into vocational training delivery
TAERES501	Apply research to training and assessment practice
TAESUS501	Analyse and apply sustainability skills to learning programs
TAESUS502	Identify and apply current sustainability education principles and practice to learning programs
TAETAS501	Undertake organisational training needs analysis

Qualification Mapping Information

This qualification replaces and is **not** equivalent to AVI60116 Advanced Diploma of Aviation (Chief Flight Instructor).

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

AVI60219 Advanced Diploma of Aviation (Pilot in Command)

Modification History

Release 1. This is the first release of this qualification in the AVI Aviation Training Package.

Qualification Description

Individuals working at this level will apply knowledge and skills to demonstrate autonomy, judgement and defined responsibility in contexts that are subject to change, and within broad parameters to provide specialist advice and functions.

This qualification forms some of the requirements for certification as an Air Transport Pilot and Pilot in Command by the Civil Aviation Safety Authority (CASA) as directed by Civil Aviation Safety Regulation (CASR) Part 61 Flight crew licensing.

People seeking certification should check these requirements with CASA.

Use for Defence Aviation is to be in accordance with relevant Defence Orders, Instructions, Publications and Regulations.

Occupations may include:

- Air Transport Pilot – Aeroplane
- Air Transport Pilot – Helicopter
- Military Pilot – Aeroplane
- Military Pilot – Helicopter
- Pilot in Command – Aeroplane
- Pilot in Command – Helicopter.

Entry Requirements

Commercial or military pilot entrants to this qualification should check requirements with CASA or Defence Aviation for certification and/or flight hour requirements, or be able to demonstrate equivalent competence.

Packaging Rules

A total of **8 units of competency** comprising:

8 core units listed below

Core units

AVIF0028 Manage aviation risk

AVIF0031	Manage threats and errors as pilot in command
AVIF0032	Manage human factors as pilot in command
AVIH0009	Manage aircraft flight planning and performance as pilot in command
AVIN0003	Command an aircraft in a multi-crew environment
AVIN0004	Supervise and manage safe flight operations as pilot in command
AVIO0016	Manage security procedures as pilot in command
AVIZ0002	Maintain and manage situational awareness as pilot in command

Qualification Mapping Information

This qualification replaces and is equivalent to AVI60216 Advanced Diploma of Aviation (Pilot in Command).

AVIB0001 Manage and carry out pre- and post-flight cabin checks

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to manage and carry out pre- and post-flight cabin safety checks in compliance with relevant regulatory requirements and national operating standards.

It includes carrying out pre-flight safety and security checks, preparing aircraft cabin for service, carrying out post-flight checks and carrying out administrative procedures.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to aircraft operational duties of flight crew skills and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Carry out pre-flight safety and security checks	<p>1.1 Pre-flight cabin safety and security checks are carried out in accordance with regulatory requirements and workplace procedures</p> <p>1.2 Appropriate action is taken to promptly address identified problems related to aircraft safety or security and/or to report these problems to relevant personnel in accordance with regulatory requirements and workplace procedures</p> <p>1.3 Crew resource management (CRM) principles are applied to establish and maintain awareness of the impact of time and/or commercial pressure on safety-sensitive tasks</p> <p>1.4 Tasks are prioritised during pre-flight checks to ensure critical safety tasks are addressed prior to service checks</p> <p>1.5 Appropriate action is taken in accordance with workplace procedures to report or rectify situations where cabin safety resources are faulty or inadequate in accordance with regulatory requirements and workplace procedures</p>
2 Prepare aircraft cabin for service	<p>2.1 Preparation of cabin for passenger arrival is conducted in accordance with workplace procedures</p> <p>2.2 Pre-flight cabin service checks are carried out in accordance with regulatory requirements and workplace procedures</p> <p>2.3 Cabin resources are accessed to replenish depleted stocks as required</p> <p>2.4 Cabin configuration faults are reported/rectified in accordance with workplace procedures</p>
3 Carry out post-flight checks	<p>3.1 Post-flight cabin safety, security and service checks are carried out in accordance with regulatory requirements and workplace procedures</p> <p>3.2 Aircraft cabin and systems are inspected for serviceability and depleted stocks are identified and reported in accordance with workplace procedures</p>
4 Carry out administrative	<p>4.1 Workplace administrative procedures concerning cabin</p>

procedures

safety, security and service checks, and related action are identified and interpreted

- 4.2 Administrative procedures are implemented in accordance with regulatory requirements and workplace procedures
- 4.3 All required pre- and post-flight cabin safety, security and service checking documentation is completed in accordance with regulatory requirements and workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIB3004 Manage and carry out pre- and post-flight cabin checks.

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIB0001 Manage and carry out pre- and post-flight cabin checks

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant aeronautical knowledge
- applying relevant legislation and workplace procedures
- communicating effectively with others
- conducting pre- and post-flight cabin safety and security checks, including:
 - safety resources, cabin equipment and first aid equipment
 - security of aircraft cabin
 - aircraft safety and emergency equipment
 - cabin facilities
 - passenger support resources
 - seating and passenger restraints
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying identified problems promptly in accordance with regulatory requirements and workplace procedures
- reporting difficulties in preparing a cabin
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards

- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- action to be taken during pre- and post-flight cabin checks in response to senior aircrew instructions
- airline administrative procedures
- airline procedures and standards for managing and conducting pre- and post-flight cabin service checks on aircraft
- cabin safety resources for various types of aircraft
- cabin service features and amenities for various types of aircraft
- crew resource management (CRM) and human factors (HF) principles
- problems that may occur when managing and conducting pre- and post-flight cabin checks and action that should be taken in each case
- regulatory requirements and airline procedures and standards for managing and conducting pre- and post-flight cabin safety and security checks on aircraft
- regulatory requirements concerning passenger and aircraft safety and security
- relevant customs, quarantine, equal opportunity and anti-discrimination regulations
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders
- relevant WHS security hygiene and environmental procedures/regulations
- risks that exist when conducting pre- and post-flight cabin checks and related risk control procedures and precautions.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations

- relevant materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- acceptable means of simulation assessment.

AVIB0002 Inspect and report on aerodrome serviceability

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to inspect and report on aerodrome serviceability in compliance with the relevant regulatory requirements and national standards.

It includes performing an aerodrome inspection, reporting hazardous situations, facilitating repairs and reporting the ongoing serviceability or restoration of aerodrome serviceability.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to aerodrome operations duties of ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Inspect aerodrome serviceability**
 - 1.1 Access to aerodrome is arranged with appropriate authorities
 - 1.2 Aerodrome is inspected for hazards and serviceability
 - 1.3 Situations resulting in unserviceability of aerodrome are identified in accordance with workplace procedures
 - 1.4 Hazardous situations or unserviceability are rectified or made safe, as required, in accordance with workplace procedures and regulatory requirements
- 2 Report unserviceable and hazardous situations**
 - 2.1 Requirements for official notification of hazardous situations, unserviceability and defects are assessed
 - 2.2 Relevant authorities or organisations are notified of hazardous situations, unserviceability and defects in accordance with workplace procedures and regulatory requirements
 - 2.3 Hazard reports and documentation are completed, filed and disseminated in accordance with workplace procedures
- 3 Facilitate repairs**
 - 3.1 Hazardous situations, unserviceability and defects are rectified in accordance with workplace procedures and regulatory requirements with minimal disruption to aircraft operations
 - 3.2 Relevant authorities and organisations are notified of works that may disrupt aircraft operations in accordance with workplace procedures and regulatory requirements
 - 3.3 Temporary markers, markings and/or temporary aerodrome lighting are deployed, as required, to facilitate repairs
- 4 Report restoration of aerodrome serviceability**
 - 4.1 Restoration of aerodrome serviceability is confirmed in accordance with workplace procedures and regulatory requirements
 - 4.2 Temporary markers, markings and/or temporary aerodrome lighting used to facilitate repairs are removed
 - 4.3 Relevant authorities are notified of restoration of aerodrome serviceability in accordance with workplace procedures and regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIB3005 Inspect and report on aerodrome serviceability

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIB0002 Inspect and report on aerodrome serviceability

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with workplace procedures
- applying relevant legislation and workplace procedures
- applying relevant systems (such as aerodrome safety management system [SMS]) and procedures to assess and/or mitigate risk that might arise during inspecting and reporting on aerodrome serviceability
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using equipment required to conduct an inspection and report on aerodrome serviceability
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities according to workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, signs, information and Manual of Standards (MOS)
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- conducting aerodrome hazard and serviceability inspections, including:
 - animal and bird hazards, and objects becoming hazards within obstacle limitation areas
 - movement areas:
 - apron
 - clearway

- runway and runway strip
- runway end safety area (RESA)
- taxiway and taxiway strip
- initiating procedural repairs or dealing with hazards and/or unserviceabilities, including:
 - accessing current weather information and public/aviation forecasts for the worksite
 - closing aerodrome to all air traffic
 - contacting aerodrome users
 - dealing with the hazard
 - ensuring lighting required to carry out works does not represent a hazard to aircraft operations
 - extinguishing lighting to hazardous section of the movement area
 - notifying appropriate aerodrome maintenance personnel or contractors
 - marking unserviceable area
 - partial closure of the movement area
 - reporting by a Notice to Airmen (NOTAM)
 - serviceability inspection following repairs/rectification
 - undertaking repairs
- reporting of hazardous situations requiring aerodrome works, including:
 - changes to temporary or permanent published aerodrome information
 - circuit failure
 - failure of:
 - aerodrome beacon
 - lighting to the wind indicator
 - obstacle lights
 - pilot activated lighting (PAL)
 - hazardous situations resulting in some or all of aerodrome becoming unserviceable
 - partial lighting failures (such as described in MOS Part 139 – Aerodromes)
 - power supply failure
 - restoration of aerodrome serviceability
 - general aerodrome lighting facilities - apron lighting, runway lighting etc.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- aerodrome layout, including access routes
- aircraft schedules and their use in inspecting and reporting on aerodrome serviceability
- different operating conditions:
 - all weather conditions

- day and night
- various forms of transport, such as vehicle and other motorised/towed equipment
- variety of terrain conditions
- equipment used when inspecting and reporting on aerodrome serviceability
- functions of an Aerodrome Reporting Officer (ARO) and a Works Safety Officer (WSO) as defined in MOS Part 139 – Aerodromes
- navigational aids
- operation of airband radio equipment as used to communicate with air traffic control (ATC) and/or pilots
- problems, safety hazards and risks that exist when inspecting an aerodrome and related assessment/management measures that may need to be taken
- hazardous situations leading to aerodrome unserviceability
- procedures for servicing and minor maintenance of equipment used when inspecting and reporting on aerodrome serviceability
- purpose and application of:
 - aerodrome markers, markings and temporary lighting
 - method of working plan (MOWP)
- radio frequencies applicable to the aerodrome:
 - automatic terminal information services (ATIS)
 - common traffic advisory frequency (CTAF)
 - other air traffic agencies (such as ATC or flight information region [FIR])
 - aerodrome weather information broadcast (AWIB)
- relevant obstacle limitation surfaces (OLS) surfaces
- relevant information and documents:
 - aerodrome emergency plan (AEP) and procedures to be followed for each aerodrome emergency
 - aerodrome SMS and safety/security policies and principles of risk assessment and risk management
 - aerodrome drug and alcohol management plan (DAMP)
 - aerodrome manual
 - aeronautical information publication (AIP)
 - AIP – En Route Supplement Australia (ERSA)
 - airline timetables
 - airside driver's handbook and/or airside driving requirements for the aerodrome
 - Civil Aviation Safety Regulations (CASRs)
 - conditions of service, legislation and industrial agreements, including workplace agreements and awards
 - induction and training materials
 - logbooks
 - MOS Part 139 – Aerodromes
 - manufacturer specifications for equipment used when inspecting and reporting on

- aerodromes
 - NOTAM
 - operational checklists
 - plans and maps
 - relevant forms and databases
 - wildlife hazard management plan
 - workplace procedures
- relevant legislative and regulatory requirements relating to inspecting and reporting on the serviceability of an aerodrome as identified in:
 - CASRs and MOS Part 139 – Aerodromes
 - environmental sustainability
 - standards and recommended practices (SARPs) of the International Civil Aviation Organization (ICAO)
 - workplace relations
 - WHS and environmental procedures and regulations, including DAMP
- reporting procedures
- requirements for completing relevant documentation and/or incident reporting
- safety distances required from an aircraft wingtip to objects, including other aircraft:
 - unserviceability markers/markings
 - displaced threshold markers
 - dumbbell markers
 - signal circle markers
 - unserviceability lighting
 - unserviceability cross markers
 - unserviceability cones
- temporary aerodrome lighting
- vehicle or other mobile obstacle markings and equipment:
 - company logo/identification
 - orange or yellow painting or distinctive marking (of vehicles regularly used on movement area)
 - warning lights (orange/amber/yellow) mounted to be visible through 360 degrees
- weather information and implications for workplace operations
- workplace procedures for inspecting and reporting on aerodrome serviceability.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

- Resources for assessment must include access to:
- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- acceptable means of simulated assessment.

AVIB0003 Inspect and report on serviceability of aerodrome lighting systems

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to inspect and report on serviceability of aerodrome lighting systems in compliance with relevant regulatory requirements and national standards.

It includes inspecting and reporting faults in aerodrome lighting, making identified unserviceable condition/s safe, and confirming and reporting the return of aerodrome lighting to serviceable condition.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to aerodrome operations duties of ground operational personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Inspect aerodrome lighting serviceability

- 1.1 Access to aerodrome is arranged with appropriate authorities
- 1.2 Lighting systems are prepared for serviceability inspection
- 1.3 Lighting systems are inspected for serviceability, and faults or hazardous situations that may affect aircraft safety are identified
- 1.4 Hazardous situation created by faulty lighting system/s is rectified or made safe, as required, in accordance with workplace procedures and regulatory requirements

2 Report faults in aerodrome lighting

- 2.1 Requirement for official notification of lighting faults is assessed
- 2.2 Suitably qualified aerodrome staff or electrical contractors are contacted for repairs as required
- 2.3 Relevant authorities or organisations are notified of damage to aerodrome lighting, switching mechanisms and circuits in accordance with workplace procedures and regulatory requirements

3 Make unserviceable conditions safe

- 3.1 Faulty lights are replaced or repaired in accordance with workplace procedures and regulatory requirements with minimal disruption to aircraft movements
- 3.2 Relevant authorities or organisations are notified of works that may disrupt aerodrome operations in accordance with workplace procedures and regulatory requirements
- 3.3 Temporary lighting is installed as required

4 Report return of aerodrome lighting to serviceable condition

- 4.1 Restored aerodrome lighting systems are inspected and confirmed for serviceability
- 4.2 Temporary lighting is removed
- 4.3 Relevant authorities or organisations are notified of

restoration of lighting serviceability in accordance with workplace procedures and regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIB3006 Inspect and report on serviceability of aerodrome lighting systems.

Assessment Requirements for AVIB0003 Inspect and report on serviceability of aerodrome lighting systems

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with workplace procedures
- applying relevant legislation and workplace procedures
- applying relevant systems (such as safety management systems [SMS]) and procedures to assess and/or mitigate risk that might arise during inspecting and reporting on serviceability of aerodrome lighting systems
- communicating effectively with others when inspecting and reporting on serviceability of aerodrome lighting systems
- completing documentation related to inspecting and reporting on serviceability of aerodrome lighting systems
- identifying and correctly using equipment required to inspect and report on serviceability of aerodrome lighting systems
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities in accordance with workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocols
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting faults in aerodrome lighting
- initiating procedural repairs or hazard removal, including:
 - notifying appropriate aerodrome lighting personnel or electrical contractors
 - notifying relevant aerodrome personnel
 - removing hazard/s
 - serviceability inspection (following repairs)
 - undertaking repairs
- working collaboratively with others

- working systematically with required attention to detail.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- aerodrome layout, including access routes
- aircraft schedules and their use in inspecting and reporting on serviceability of aerodrome lighting systems
- aerodrome movement area facilities, including:
 - apron
 - clearway
 - markers, markings and aerodrome lighting
 - runway and runway strip
 - runway end safety area (RESA)
 - taxiway and taxiway strip
- workplace procedures for making a lighting problem safe, including:
 - closing movement area (aerodrome closure)
 - contacting aerodrome user
 - partial closure of movement area
- allowable minor repairs under electrical codes and workplace procedures, and arrangements for engaging a qualified electrician to carry out repairs
- basic features and characteristics of aerodrome lighting systems
- different operating conditions:
 - all weather conditions
 - day and night
 - variety of terrain conditions
- various forms of transport, such as vehicle and other motorised/towed equipment
- effects on serviceability of aerodrome caused by lighting faults
- equipment used in inspecting and reporting on serviceability of aerodrome lighting systems
- faults in aerodrome lighting including:
 - changes to temporary or permanent published aerodrome information
 - electrical circuit failure
 - failure of:
 - aerodrome beacon
 - wind indicator lighting
 - obstruction lights
 - pilot activated lighting (PAL)
- hazardous situations resulting in some or all of the aerodrome lighting becoming unserviceable

- partial lighting failures
- power supply failure
- restoration of aerodrome serviceability
- operation of airband radio equipment as used to communicate with air traffic control (ATC) and/or pilots
- orange or yellow painting or distinctive marking of vehicles regularly used on movement area
- permanent aerodrome lighting facilities
- temporary lighting, including:
 - battery-powered lights
 - hard-wired portable lights
 - kerosene flares
 - solar-powered lights
 - vehicle lighting.
- aerodrome beacon
- approach lighting
- apron:
 - edge lights
 - flooding lights
 - illuminated wind indicators
 - obstacle lighting
 - pilot activated lighting (PAL)
 - precision approach path indicator (PAPI)/visual approach slope indicator system (VASIS)
- runway:
 - end identification lights
 - end lights
 - edge lights
 - threshold lights
 - centre line lighting
 - touch down zone lighting
 - high intensity and approach lighting
 - stop bar lighting
 - runway guard lighting
 - movement area guidance sign lighting
 - threshold identification lights
- standby power
- taxiway:
 - centreline lights
 - edge lights
 - movement area guidance sign lighting

- obstacle lighting
- problems, safety hazards and risks that exist when inspecting serviceability of aerodrome lighting systems and related assessment/management measures that may need to be taken into account
- procedures for servicing and minor maintenance of equipment used in inspecting and reporting serviceability of aerodrome lighting systems
- purpose and application of aerodrome markers, markings and temporary lighting
- radio frequencies applicable to the aerodrome
- relevant information/documents:
 - aerodrome emergency plan (AEP) and procedures to be followed for each aerodrome emergency
 - aerodrome manual
 - aerodrome SMS and safety/security policies and principles of risk assessment and risk management
 - aeronautical information publication (AIP)
 - AIP – En Route Supplement Australia (ERSA)
 - equipment manufacturer specifications for inspecting and reporting on aerodrome lighting systems
- documentation related to inspecting and reporting on serviceability of aerodrome lighting systems
- Manual of Standards (MOS) Part 139 – Aerodromes
- Civil Aviation Safety Regulations 1998 – Volume 4
- operational checklists
- plans and maps
- relevant legislative and regulatory requirements relating to inspecting and reporting on aerodrome lighting systems
- reporting procedures
- requirements for completing relevant documentation and/or incident reporting
- weather information and implications for workplace operations
- workplace procedures for inspecting and reporting on serviceability of aerodrome lighting systems
- acceptable outages to lighting
- awareness of hazardous lighting to aviation operations.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy

requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry.
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- acceptable means of simulation assessment.

AVIB0004 Inspect and report on obstacle limitation surfaces

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to inspect and report on obstacle limitation surfaces (OLS) in compliance with relevant regulatory requirements and national operating standards.

It includes performing a visual inspection of OLS, reporting obstacles in OLS and reporting the return of an aerodrome to the previous status.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to aerodrome operations duties of ground operational personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

1 Perform a visual inspection of OLS

- 1.1** OLS are inspected visually and existing approved obstacles inspected for compliance with their approval and objects or structures that have or may become obstacles are identified
- 1.2** Obstacles in OLS are removed in accordance with workplace procedures
- 1.3** Where an obstacle cannot be removed, a determination for reporting, marking or lighting the obstacle is made in accordance with workplace procedures
- 1.4** Approved obstacles are inspected visually and checked for compliance in accordance with regulatory requirements

2 Report obstacles in OLS

- 2.1** Where an obstacle cannot be removed, information required for calculating declared distances and supplementary take off distances is collated in accordance with workplace procedures
- 2.2** All relevant authorities or organisations are notified of the status of obstacles, including breaches of approvals, if obstacles can't be removed and, where required, declared distances for obstacles
- 2.3** All relevant authorities or organisations are notified of appropriate marking and lighting requirements using suitable means of communication in accordance with regulatory requirements and approvals
- 2.4** All relevant authorities or organisations are notified of illegal unmanned aerial vehicle (UAV) operations in air space surrounding aerodrome using suitable means of communication

3 Report return of aerodrome to previous status

- 3.1** OLS are inspected visually to confirm removal of temporary obstacles
- 3.2** Relevant authorities or organisations are notified of removal of temporary obstacles using suitable means of communication
- 3.3** Newly approved permanent obstacle/s are added to monitoring schedule in accordance with regulatory requirements and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIB3007 Inspect and report on obstacle limitation surfaces.

Assessment Requirements for AVIB0004 Inspect and report on obstacle limitation surfaces

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with workplace procedures
- applying relevant legislation and workplace procedures
- applying relevant systems (such as aerodrome safety management system [SMS]) and procedures to assess and/or mitigate risk
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using equipment required to inspect and report on the obstacle limitation surfaces (OLS)
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities in accordance with contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- aerodrome layout, including access routes

- aircraft schedules and their use in inspecting and reporting on OLS
- declared distances, including:
 - accelerate stop distance available (ASDA)
 - end of take-off distance available (TODA) gradient
 - landing distance available (LDA)
 - supplementary take-off distances available (STODA) and associated gradients
 - TODA
 - take-off run available (TORA)
- different conditions for OLS inspections:
 - all weather conditions
 - day and night
 - various forms of transport, such as vehicle and other motorised/towed equipment
 - variety of terrain conditions
- suitable means of reporting, including:
 - method of working plan (MOWP)
 - Notice to Airmen (NOTAM)
 - verbal communications
 - written communication via fax and/or email
- effects on the usability of the aerodrome caused by obstacles
- function of an Aerodrome Reporting Officer (ARO) or a Works Safety Officer (WSO) as defined in the Manual of Standards (MOS) Part 139 – Aerodromes
- operation of airband radio equipment as used to communicate with air traffic control (ATC) and/or pilots
- people to notify about OLS inspection and reporting:
 - relevant government authorities
 - aerodrome tenants/users
 - airline personnel and managers
 - ATC
 - contractors
 - emergency services personnel
 - other aerodrome/workplace personnel and managers
 - relevant technical staff
 - safety personnel
 - security personnel
- principles of shielding
- displaced thresholds or situations which may constitute the need for a displaced threshold
- problems, safety hazards and risks that exist when inspecting and reporting on OLS and related risk assessment/management measures that may need to be taken
- relevant equipment used in inspecting and reporting on OLS:
 - computer

- lights
- radio/s
- serviceability markers and cones (displaced threshold markers, dumb bell markers, glider markers, signal circle markers, unserviceability cones, unserviceability cross markers and work limit markers)
- telephone
- vehicle siren/loud speaker
- vehicle with flashing light
- reporting procedures
- relevant information/documents:
 - aerodrome drug and alcohol management plan (DAMP)
 - aerodrome manual
 - aerodrome SMS, and safety/security policies and principles of risk assessment and risk management
 - aerodrome operating procedures
 - aeronautical information publication (AIP)
 - AIP – En Route Supplement Australia (ERSA)
 - airport legislation and airport (protection of airspace) regulations
 - airline timetables
 - airside driver’s handbook and/or airside driving requirements for the aerodrome
 - Civil Aviation Safety Regulations (CASRs)
 - conditions of service, legislation and industrial agreements, including workplace agreements and awards
 - equipment manufacturer specifications for inspecting and reporting on OLS
 - induction and training material
 - MOS Part 139 – Aerodromes
 - NOTAM
 - plans and maps
 - workplace procedures for inspecting and reporting on OLS
- relevant legislative and regulatory requirements relating to inspecting and reporting on OLS as identified in:
 - CASRs and MOS Part 139 – Aerodromes
 - Defence Orders and Instructions
 - standards and recommended practices (SARPs) of the International Civil Aviation Organization (ICAO)
 - workplace relations
- reporting procedures
- relevant authorities for accessing and reporting purposes, including:
 - aerodrome:
 - operator or delegated person
 - users

- ATC
- Australian Defence Force (ADF) aerodrome operators
- Civil Aviation Safety Authority (CASA)
- NOTAM office (i.e. Airservices Australia)
- requirements for completing relevant documentation and/or incident reporting
- surfaces which comprise OLS, including:
 - approach and take-off surfaces
 - baulked landing surfaces
 - conical surface
 - inner approach surface
 - inner horizontal surface
 - inner transitional surface
 - outer horizontal surface
 - transitional surface
- weather information and its implications for workplace operations
- workplace procedure for inspecting and reporting on OLS.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant materials, tools, equipment and personal protective equipment currently used in industry.
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- acceptable means of simulation assessment.

AVIC0001 Drive on the airside

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to drive on the airside within Australian aviation environments in controlled and uncontrolled aerodromes in compliance with relevant regulatory requirements and national operating standards.

It includes driving on the airside and driving safely on the airside.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to vehicle operating duties of ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

C – Driving Vehicle

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--------------------------------------|---|
| 1 Drive on the airside | 1.1 Vehicle airside requirements are complied with, including vehicle condition, lighting and licences |
| | 1.2 Driving is conducted in accordance with airside driving rules and regulatory requirements, including a manoeuvring area, as required |
| | 1.3 Airport markings, markers, signs and signals are correctly interpreted and followed |
| | 1.4 Listening watch is maintained in accordance with workplace procedures |
| 2 Drive safely on the airside | 2.1 Risks and hazards associated with driving airside are identified and managed |
| | 2.2 Breaches of airside driving rules are logged and reported |
| | 2.3 Airside driving incidents, including runway incursions, are reported as required |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIC2001 Drive on the airside.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIC0001 Drive on the airside

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using required equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying identified problems promptly in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self, others or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- airside access requirements
- airside driving requirements for specified aerodrome
- circumstances where airside driving is not permitted
- emergency procedures
- procedures for managing and controlling hazardous situations when carrying out work

activities

- procedures for operating electronic communications equipment
- relevant WHS and environmental procedures and Manual of Standards (MOS) regulations
- requirements for completing relevant documentation
- safe operating systems for vehicle being driven airside
- SOPs for driving airside, including:
 - orange or yellow painting or distinctive marking and visible warning lights through 360 degrees (of vehicles regularly used on movement area)
 - vehicle or other mobile obstacle markings and equipment.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- acceptable means of simulation assessment.

AVIC4002 Administer airside driving

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to administer airside driving, in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes testing applicants to drive airside, administering and issuing vehicle permits, and investigating airside driving incidents.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to administrative duties of ground operations personnel, and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Use for Defence Aviation is to be in accordance with relevant Defence Orders, Instructions, Publications and Regulations.

Pre-requisite Unit

Not applicable.

Competency Field

C – Driving Vehicle

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Test applicants to drive airside

2 Administer and issue vehicle permits

3 Investigate airside driving incidents

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|-----|---|
| 1.1 | Airside driving tests are administered and results are recorded in accordance with established procedures |
| 1.2 | Documentation is issued to appropriate authorities as required and recorded |
| 2.1 | Permit is issued in accordance with aerodrome procedures |
| 2.2 | Conditions of use of permit are explained to applicant |
| 3.1 | Reports on incidents and accidents are prepared and appropriate safety management is actioned |
| 3.2 | Airside driving procedures and rules are reviewed |
| 3.3 | Recommendations for safety improvements are made to aerodrome management |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Applicable regulations and legislation must include:
- Manual of Standards Part 139 – Aerodromes
 - relevant licensing authority licence requirements
 - relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
 - relevant sections of the current Transport Safety Investigation Act for reporting transport safety matters
 - relevant work health and safety (WHS)/occupational health and

safety (OHS) and environmental regulations

Unit Mapping Information

This unit replaces and is equivalent to AVIC4002A Administer airside driving.

Assessment Requirements for AVIC4002 Administer airside driving

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS)/occupational health and safety (OHS) procedures and relevant regulations
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective clothing and equipment conforming to industry and WHS/OHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self, others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- braking and safety system procedures
- cleaning requirements
- communications equipment checks
- controls, instruments and indicators and their purpose, location and use
- emergency procedures
- external features of equipment that must be checked during a pre-operational visual inspection
- fuel tank capacity and range
- functions of all supervisory indicators and controls and related checks for correct operation
- functions of ancillary systems and related checks for correct operation
- lubrication requirements
- operating controls
- operating procedures
- pre-operational checks
- principles, purpose and location of controls, monitoring devices, and systems
- procedures for adjusting controls to optimise equipment operation
- procedures for checking fluid levels and carrying out lubrication processes
- procedures for identifying equipment defects and assessing for appropriate action
- procedures for managing and controlling hazardous situations when carrying out work activities
- procedures for operating electronic communications equipment
- procedures for servicing and minor maintenance
- procedures for starting and operating ancillary systems
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- relevant sections of national and state/territory regulatory requirements and codes of practice
- relevant WHS/OHS and environmental procedures and regulations
- requirements for completing relevant documentation
- sources of information on differences in equipment and related standard operating and servicing procedures
- start-up procedures
- steps involved in planning work activities
- typical defects that can occur and related action that should be taken
- visual inspection procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

AVID0003 Package dangerous goods for air transport

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to package dangerous goods for air transport in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes selecting appropriate packing instructions, identifying and selecting packing, packaging dangerous goods, labelling and marking dangerous goods, and stowing packaged dangerous goods in accordance with regulatory requirements.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to load handling duties of ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--|--|
| 1 Select appropriate packing instructions | <p>1.1 Dangerous goods to be transported are identified and classified in accordance with workplace procedures and regulatory requirements</p> <p>1.2 Appropriate packing instructions for the identified class of dangerous goods are selected in accordance with relevant regulatory requirements</p> |
| 2 Identify and select packing | <p>2.1 Required packing materials are identified and selected in accordance with workplace procedures and regulatory requirements</p> <p>2.2 Checks are made to confirm that selected packing has undergone all required tests in accordance with relevant regulatory requirements</p> <p>2.3 Where required, combination of packing is checked to confirm it has been appropriately tested in accordance with relevant regulatory requirements</p> |
| 3 Package dangerous goods | <p>3.1 Dangerous goods are packaged using selected packing materials in accordance with workplace procedures and regulatory requirements</p> <p>3.2 Approved absorbent materials and cushioning are used in accordance with relevant regulatory requirements</p> |
| 4 Label and mark packaged dangerous goods | <p>4.1 Packaged dangerous goods are labelled and marked in accordance with workplace procedures and regulatory requirements</p> |
| 5 Stow packaged dangerous goods | <p>5.1 Packaged dangerous goods are stowed in accordance with workplace procedures and regulatory requirements</p> <p>5.2 Relevant personnel are advised of the disposition of stowed packaged dangerous goods in accordance with workplace procedures and regulatory requirements</p> |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVID0001 Package dangerous goods for air transport.

Assessment Requirements for AVID0003 Package dangerous goods for air transport

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation, including labelling and marking packaged dangerous goods
- identifying and correctly using relevant equipment
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- reading, interpreting and following relevant regulations, instructions, procedures, information, signs and labels
- reporting and/or rectifying identified problems promptly in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- characteristics and ways of identifying various classes of dangerous goods
- documentation requirements for transporting appropriate dangerous goods by air
- problems that may occur when packaging dangerous goods for air transport and appropriate action that should be taken in each case
- relevant regulatory requirements pertaining to packaging, packing, marking, labelling, documenting, storing and despatching dangerous goods designated for air transport, including International Air Transport Association (IATA) and Civil Aviation Safety Authority (CASA) requirements
- relevant WHS/OHS and environmental procedures and regulations

- risks that exist when packaging dangerous goods for air transport and related risk control procedures and precautions
- safety principles for packaging dangerous goods for air transport
- workplace procedures for packaging, packing, marking, labelling, documenting, storing and despatching dangerous goods designated for air transport.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant materials, tools, equipment and personal protective equipment currently used in industry.
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- acceptable means of simulation assessment.

AVID0004 Conduct baggage handling operations

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to conduct baggage handling operations in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes handling baggage and dealing with abnormal baggage handling situations.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to load handling duties of flight or ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Handle baggage

- 1.1** Baggage handling is conducted in accordance with equipment involved, operational priorities and requirements, and directions from supervisor or team leader
- 1.2** Appropriate personal protective equipment (PPE) is selected, fitted and worn in accordance with established workplace procedures
- 1.3** Hazards are identified, risks are assessed and hazard management is implemented
- 1.4** Correct manual handling principles and techniques are applied at all times when handling various types, weight and shapes of baggage
- 1.5** Luggage tags are checked to identify any special loading characteristics
- 1.6** Baggage is lifted and manoeuvred in accordance with work health and safety (WHS)/occupational health and safety (OHS) and workplace procedures relevant to baggage tag indications
- 1.7** Baggage with unusual shape or perceived hazard is identified and appropriate assistance is sought from other team members to lift and move baggage concerned
- 1.8** Baggage is stacked on or in baggage storage or movement areas in accordance with WHS/OHS and workplace procedures
- 1.9** Late baggage is collected, handled and delivered to aircraft in accordance with workplace procedures

2 Deal with abnormal baggage handling situations

- 2.1** Baggage identified as heavy, fragile or having other unusual characteristics is handled in accordance with workplace procedures and regulatory requirements specified for type of baggage concerned
- 2.2** Baggage with an unintelligible or missing tag is identified and processed/reported in accordance with procedures for baggage handling system concerned
- 2.3** Baggage that has been damaged is identified and reported/processed in accordance with workplace

procedures

- 2.4 Baggage identified as leaking unidentifiable or potentially hazardous/dangerous substances is isolated and reported in accordance with workplace procedures and regulatory requirements
- 2.5 Baggage suspected of being a potential security risk is immediately isolated and reported in accordance with workplace security requirements
- 2.6 Problems that may occur during baggage handling operations are identified and appropriate action is taken to rectify and/or report problems in accordance with workplace procedures and regulatory requirements
- 2.7 Safety hazards in baggage handling work area are identified and appropriate action is taken to minimise/eliminate risk in accordance with WHS/OHS procedures and workplace hazard control strategies

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVID0002 Conduct baggage handling operations.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVID0004 Conduct baggage handling operations

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying identified problems promptly in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards, including:
 - hearing protection
 - protective clothing
 - safety footwear
 - safety gloves
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- features and differences in various types of baggage handling equipment used at Australian airports
- hazards that exist when carrying out baggage handling operations, including:
 - baggage containing illegal substances
 - baggage found to be a security risk
 - baggage of unusual shape or physical size
 - dust
 - heavy baggage
 - incorrectly labelled baggage
 - jet blast
 - moving airport vehicles and tugs in the vicinity of baggage handling areas
 - moving belts and automated baggage equipment
 - noise
 - overweight baggage
 - use of incorrect lifting techniques for baggage concerned
- manufacturer instructions for relevant equipment used during baggage handling operations
- principles of safe and effective baggage handling
- problems that may occur when carrying out baggage handling operations and appropriate action that should be taken in each case
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders pertaining to airside safety procedures
- relevant WHS and environmental procedures and regulations
- risks that exist when carrying out baggage handling operations and related risk control procedures and precautions
- workplace procedures for baggage handling operations.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace

conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant materials, tools, equipment and personal protective equipment currently used in industry.
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- acceptable means of simulation assessment

AVID0005 Accept dangerous goods for air transport

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to accept dangerous goods for air transport in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes interpreting freight documentation, recognising dangerous goods, accepting appropriate dangerous goods, declining to accept prohibited and improperly prepared dangerous goods, preparing required dangerous goods documentation and stowing dangerous goods.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to load handling duties that complement ground operations personnel non-technical skills and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Interpret freight documentation	<p>1.1 Received documentation for transporting freight by air is examined and interpreted in accordance with workplace procedures and regulatory requirements</p> <p>1.2 Types of freight to be transported are identified in accordance with workplace procedures and regulatory requirements</p>
2 Recognise dangerous goods	<p>2.1 Freight containing dangerous goods is recognised in accordance with workplace procedures and regulatory requirements</p> <p>2.2 Hazards are identified, risks are assessed and hazard management implemented</p> <p>2.3 All types of dangerous goods and items containing dangerous goods are correctly identified</p> <p>2.4 Workplace policies and regulatory requirements concerning the types of dangerous goods are identified, interpreted and applied</p>
3 Accept appropriate dangerous goods	<p>3.1 , Dangerous goods not permitted to be transported by air are identified and shipper advised that freight cannot be accepted</p> <p>3.2 Shipper is given an explanation of reasons why prohibited dangerous goods freight cannot be accepted and is referred to relevant regulatory requirements in accordance with workplace procedures</p> <p>3.3 Requirements for packaging, labelling and handling of dangerous goods permitted to be transported by air, where identified, are confirmed in accordance with workplace procedures and regulatory requirements</p> <p>3.4 Dangerous goods accepted for air transport are checked to ensure they are packaged and labelled in accordance with regulatory requirements</p> <p>3.5 Dangerous goods accepted for air freight are handled in accordance with regulatory requirements, including procedures for emergencies and spills</p>
4 Prepare dangerous goods documentation	<p>4.1 Relevant documentation, including an air waybill and check sheets, are prepared and signed in accordance</p>

- with workplace procedures and regulatory requirements
- 4.2** Relevant documentation is attached to freight, processed and filed in accordance with workplace procedures and regulatory requirements
- 5 Stow dangerous goods**
- 5.1** All dangerous goods are stowed in appropriate storage facilities in accordance with workplace procedures and regulatory requirements
- 5.2** Relevant personnel are advised of the disposition of stowed dangerous goods in accordance with workplace procedures and regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVID2001 Accept dangerous goods for air transport.

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVID0005 Accept dangerous goods for air transport

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards to the following:
 - contamination of, or from, materials being handled
 - dust/vapours
 - hazardous or dangerous materials
 - spill, leakages and ruptures
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- managing hazards
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- reading and interpreting relevant documents, instructions, regulations, procedures and other information
- reporting and/or rectifying identified promptly in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- characteristics and ways of identifying various types of dangerous goods
- principles of hierarchy of risk control:
 - elimination
 - substitution
 - isolation
 - engineering control measures
 - safe working practices
 - PPE
- documentation requirements for transporting appropriate dangerous goods by air
- people to be consulted about accepting dangerous goods for air transport:
 - customers
 - dangerous goods experts and advisors
 - flight crew
 - other members of the work team/s
 - supervisors and managers
 - technical staff
- problems that may occur when accepting dangerous goods for air transport and appropriate action that should be taken in each case
- relevant WHS environmental procedures and regulations
- relevant regulatory requirements pertaining to accepting, packing, marking, labelling, documenting, storing and despatching dangerous goods designated for air transport, including International Air Transport Association (IATA) and Civil Aviation Safety Authority (CASA) requirements
- risks that exist when accepting dangerous goods for air transport and related risk control procedures and precautions
- safety principles for accepting dangerous goods for air transport
- workplace procedures for accepting, packing, marking, labelling, documenting, storing and despatching dangerous goods designated for air transport
- documentation, including:
 - air waybill
 - Civil Aviation Safety Regulations (CASRs) relevant to accepting dangerous goods for air transport
 - conditions of service, legislation and industrial agreements, including workplace agreements and awards
 - emergency procedures, including procedures for handling spills
 - flight schedules
 - goods identification numbers and codes

- induction and training materials
- local instructions
- manifests, bar codes, goods and product identification
- safety data sheets (SDSs)/material safety data sheets (MSDSs)
- WHS regulations
- relevant Australian Standards and industry safety codes
- supplier and/or client instructions
- workplace checklists for accepting dangerous goods for air transport
- workplace procedures, instructions and job specifications.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant materials, tools, equipment and PPE currently used in industry.
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- acceptable means of simulation assessment.

AVID0006 Prepare freight for flight

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to prepare freight for flight in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes identifying freight, packaging freight, labelling freight and assembling freight ready for loading onto aircraft.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to load handling duties of ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

1 Identify freight

- 1.1** Documentation for transporting freight by air is examined and interpreted in accordance with workplace procedures and regulatory requirements
- 1.2** Hazards are identified, risks are assessed and hazard management is implemented
- 1.3** Types of freight to be transported are identified in accordance with workplace procedures and regulatory requirements

2 Package freight

- 2.1** Requirements for packaging freight are identified and interpreted in accordance with workplace procedures
- 2.2** Materials and resources required for packaging are selected in accordance with workplace procedures
- 2.3** Freight is securely packaged in accordance with identified requirements

3 Label freight

- 3.1** Requirements for labelling freight are identified and interpreted in accordance with workplace procedures
- 3.2** Freight is correctly labelled in accordance with workplace procedures and regulatory requirements

4 Assemble freight ready for loading onto aircraft

- 4.1** Freight is consolidated in accordance with loading plan
- 4.2** Freight is loaded into containers as required in accordance with workplace procedures and regulatory requirements
- 4.3** Loose freight is appropriately assembled for transfer to aircraft in accordance with workplace procedures and regulatory requirements
- 4.4** Live freight is placed in appropriate assembly area and correctly cared for in accordance with workplace procedures and regulatory requirements
- 4.5** Freight containing allowable dangerous goods is appropriately segregated and stored in preparation for loading in accordance with workplace procedures and relevant regulatory requirements
- 4.6** Screening of freight by Security for explosives in accordance with workplace procedures and relevant

regulatory requirements is confirmed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVID2003 Prepare freight for flight.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVID0006 Prepare freight for flight

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards, including:
 - contamination of, or from, materials being handled
 - dust and vapours
 - hazardous or dangerous materials
 - spill, leakages and ruptures
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information, signs and labels
- reporting and/or rectifying identified problems promptly in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- types of freight, including:
 - allowable dangerous goods
 - aviation containers/cans loaded with freight
 - diplomatic items
 - fragile goods
 - general freight
 - human remains
 - live freight
 - loose freight
 - mail/express
 - perishable goods
 - unaccompanied baggage
 - valuables
- air freight loading principles
- features and differences in various types of freight handling and packaging equipment used at Australian airports and freight terminals
- manual handling procedures
- manufacturer instructions for relevant equipment and packing used during freight preparation operations
- people to be consulted about preparing freight for air transport, including:
 - customers
 - dangerous goods experts and advisors
 - experts and advisors on the transport of animals and livestock
 - experts on other special categories of air freight
 - flight crew
 - human remains experts, funeral directors and advisors
 - international and domestic agents, suppliers and clients
 - mail/express experts and advisors
 - other members of the work team/s
 - perishable goods experts and advisors
 - relevant authorities and institutions
 - supervisor/s and manager/s
 - technical staff
 - valuable goods security experts
- documentation, including:
 - chain of responsibility implications for air transport of freight

- cold chain checklists and guidelines for air transport of perishable goods
- conditions of service, legislation and industrial agreements, including workplace agreements and awards
- emergency procedures
- flight schedules
- goods identification numbers and codes
- induction and training materials
- local instructions
- manifests, bar codes, goods and product identification
- WHS regulations
- relevant Australian Standards and industry codes of practice relevant to various categories of air freight
- relevant International Air Transport Association (IATA) regulations
- sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders relevant to preparing freight for air transport
- supplier and/or client instructions
- workplace checklists for preparing freight for air transport
- workplace procedures and instructions, and job specifications
- problems that may occur when carrying out freight preparation operations and appropriate action that should be taken in each case
- hazard management, including:
 - principles of the hierarchy of risk control:
 - elimination
 - substitution
 - isolation
 - engineering control measures
 - safe working practices
 - PPE
- relevant WHS and environmental procedures and regulations
- relevant regulatory requirements pertaining to preparing freight for air transport, including IATA and Civil Aviation Safety Authority (CASA) requirements
- risks that exist when carrying out freight preparation operations and related risk control procedures and precautions
- workplace procedures for freight preparation operations for various categories of air freight.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the

time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant materials, tools, equipment and PPE currently used in industry.
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- acceptable means of simulation assessment

AVID0007 Conduct aviation freight weighing operations

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to conduct aviation freight weighing operations, in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes interpreting freight documentation, weighing freight, measuring freight dimensions, confirming measurements against freight documentation and completing air waybill documentation.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to load handling duties of ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Interpret freight documentation	1.1 Freight documentation is accessed and interpreted in accordance with workplace procedures and regulatory requirements
	1.2 Hazards are identified, risks are assessed and hazard management implemented
2 Weigh freight	2.1 Weighing machine is prepared for use in accordance with manufacturer instructions and workplace procedures
	2.2 Correct manual lifting procedures are used when transferring freight to and from the weighing machine in accordance with work health and safety (WHS) regulations and workplace procedures
	2.3 Freight is weighed in accordance with manufacturer instructions and workplace procedures
	2.4 Measured weight of freight is accurately recorded in accordance with workplace procedures
3 Measure freight dimensions	3.1 Freight physical dimensions are measured in accordance with workplace procedures
	3.2 Measured freight dimensions are recorded in accordance with workplace procedures
	3.3 Freight with unusual shape is noted and an appropriate record is kept in accordance with workplace procedures
4 Confirm measurement against freight documentation	4.1 Weight and physical dimensions, as measured, are compared with those contained in received documentation
	4.2 Appropriate confirmation is recorded on air waybill in accordance with workplace procedures and regulatory requirements
	4.3 Discrepancies in the documentation between measured weight and physical dimensions are addressed with the client and are recorded in accordance with workplace procedures and regulatory requirements
5 Complete air waybill documentation	5.1 Air waybill is completed in accordance with workplace procedures and regulatory requirements

- 5.2 Air waybill is signed off and processed in accordance with workplace procedures and regulatory requirements noting all measurement outcomes
- 5.3 Processed freight is transferred to despatch area

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVID2004 Conduct aviation freight weighing operations.

Assessment Requirements for AVID0007 Conduct aviation freight weighing operations

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards, including:
 - contamination of, or from, materials being handled
 - dust/vapours
 - hazardous or dangerous materials
 - spill, leakages and ruptures
- applying precautions and required action to minimise, control or eliminate identified hazards applying relevant legislation and workplace procedures
- communicating effectively with others
- identifying and correctly using equipment required to conduct aviation freight weighing operations
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information, signs and labels
- reporting and/or rectifying identified problems promptly in accordance with regulatory requirements and workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or

damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- types of freight, including:
 - allowable dangerous goods
 - diplomatic items
 - fragile goods
 - general freight
 - human remains
 - live freight
 - loose freight
 - mail/express
 - perishable goods
 - unaccompanied baggage
 - valuables
- air waybill documentation requirements
- features and differences in various types of weighing equipment used at Australian airports and aviation freight terminals
- manual lifting precautions and procedures
- manufacturer instructions for equipment used during aviation freight weighing operations
- people to be consulted about accepting freight for air transport, including:
 - customers
 - dangerous goods experts and advisors
 - experts and advisors on the transport of animals and livestock
 - experts on other special categories of air freight
 - flight crew
 - other members of the work team/s
 - perishable goods experts and advisors
 - supervisors and managers
 - technical staff
- principles of the hierarchy of risk control:
 - elimination
 - substitution
 - isolation
 - engineering control measures
 - safe working practices

- PPE
- documentation, including:
 - aircraft loading/trim sheet
 - aviation freight weighing checklists
 - conditions of service, legislation and industrial agreements, including workplace agreements and awards
 - emergency procedures
 - flight schedules
 - freight manifest, air waybill and other relevant freight documentation
 - induction and training materials
 - local instructions
 - manufacturer specifications and instructions relevant weighing equipment
 - WHS regulations
 - sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders relevant to aviation freight weighing operations
 - workplace procedures and instructions, and job specifications
- principles of aviation freight transport, and importance of load planning and aircraft trim
- problems that may occur when conducting aviation freight weighing operations and appropriate action that should be taken in each case
- relevant WHS and environmental procedures and regulations
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders
- risks that exist when conducting aviation freight weighing operations and related risk control procedures and precautions
- workplace procedures for aviation freight weighing operations.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Aviation freight weighing operations must be carried out in one or more of the following:

- aviation freight depot/terminal, or freight check-in point at either a major airport or regional airport
- domestic or international aviation freight transport

- fully manual process, or in conjunction with automated freight handling/management equipment

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- acceptable means of simulation assessment.

AVID0008 Accept freight for air transport

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to accept freight for air transport, in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes interpreting freight documentation, recognising dangerous goods and recognising perishable freight. It also includes accepting appropriate freight, preparing freight documentation and stowing freight.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to load handling duties of ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Interpret freight documentation	<p>1.1 Received documentation for transporting freight by air is examined and interpreted in accordance with workplace procedures and regulatory requirements</p> <p>1.2 Types of freight to be transported are correctly identified in accordance with workplace procedures and regulatory requirements</p>
2 Recognise dangerous goods	<p>2.1 Freight containing dangerous goods is recognised in accordance with workplace procedures and regulatory requirements</p> <p>2.2 All types of dangerous goods and items containing dangerous goods are correctly identified</p> <p>2.3 Workplace procedures and regulatory requirements concerning the types of dangerous goods and their acceptance, handling, packing, storage and labelling are interpreted and applied</p>
3 Recognise perishable freight	<p>3.1 Freight containing perishable goods is recognised in accordance with workplace procedures and regulatory requirements</p> <p>3.2 Workplace procedures and regulatory requirements concerning various types of perishable goods and their acceptance, handling, packing, storage and labelling, are interpreted and applied</p>
4 Accept appropriate freight	<p>4.1 Shipper is advised that freight cannot be accepted where identified freight is not permitted to be transported by air</p> <p>4.2 Consignee is given an explanation of reasons why prohibited freight cannot be accepted and is referred to relevant regulatory requirements in accordance with workplace procedures</p> <p>4.3 Requirements for packaging, labelling and handling on freight permitted to be transported by air are confirmed in accordance with workplace procedures and regulatory requirements for type of goods concerned</p> <p>4.4 Freight accepted for air transport is checked to ensure it is packaged and labelled in accordance with regulatory requirements</p>

- 4.5** Freight accepted for air freight is handled in accordance with relevant regulatory requirements for type of goods concerned
- 5 Prepare freight documentation**
 - 5.1** Relevant documentation, including an air waybill and check sheets, are prepared and signed in accordance with workplace procedures and regulatory requirements
 - 5.2** Relevant documentation is attached to freight, processed and filed in accordance with workplace procedures and regulatory requirements
- 6 Stow freight**
 - 6.1** All freight is stowed in an appropriate storage facility and is monitored in accordance with workplace procedures and regulatory requirements for types of goods concerned
 - 6.2** Relevant personnel are advised of disposition of stowed freight in accordance with workplace procedures and regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVID2005 Accept freight for air transport.

Assessment Requirements for AVID0008 Accept freight for air transport

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- modifying activities dependent on differing workplace contingencies, situations and environments
- monitoring and anticipate operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communication equipment to required protocol
- reading and interpreting relevant instructions, regulations, procedures and other information
- reporting and/or rectifying any identified problems promptly in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- types of freight, including:
 - allowable dangerous goods
 - diplomatic items
 - fragile goods
 - general freight
 - human remains
 - live freight
 - loose freight
 - mail/express
 - perishable goods
 - unaccompanied baggage
 - valuables
- chain of responsibility requirements
- characteristics and ways of identifying various types of freight
- cold chain checklists and guidelines for the air transport of perishable goods
- dangerous goods, including potential hidden or undeclared dangerous goods and the regulatory requirements procedures, checklists and guidelines for dangerous goods identification, acceptance (or otherwise), handling, packing, storage and labelling.
- hazards, including:
 - contamination of, or from, materials being handled
 - dust/vapours
 - hazardous or dangerous materials
 - spill, leakages and ruptures
- people to be consulted about accepting freight for air transport, including:
 - customers
 - dangerous goods experts and advisors
 - experts and advisors on the transport of animals and livestock
 - experts on other special categories of air freight
 - flight crew
 - other members of the work team(s)
 - perishable goods experts and advisors
 - supervisors and managers
 - technical staff
- problems that may occur when carrying out acceptance of freight for air transport and appropriate action that should be taken in each case
- relevant WHS and environmental procedures and regulations
- relevant regulatory requirements pertaining to acceptance, packing, marking, labelling, documenting, storing and despatching of freight designated for air transport, including International Air Transport Association (IATA) and Civil Aviation Safety Authority (CASA) requirements
- risks that exist when accepting freight for air transport and related risk control procedures and

precautions, including:

- principles of the hierarchy of risk control:
 - elimination
 - substitution
 - isolation
 - engineering control measures
 - safe working practices
 - PPE
- safety principles for accepting freight for air transport
- workplace procedures for accepting, packing, marking, labelling, documenting, storing and despatching various types of freight designated for air transport
- documentation requirements for the transport of various types of freight by air, including:
 - Civil Aviation Safety Regulations (CASRs) relevant to accepting freight for air transport
 - cold chain checklists and guidelines for air transport of perishable goods
 - conditions of service, legislation and industrial agreements including workplace agreements and awards
 - emergency procedures
 - flight schedules
 - goods identification numbers and codes
 - induction and training materials
 - local instructions
 - manifests, bar codes, goods and product identification
 - WHS regulations
 - relevant Australian Standards and industry codes of practice relevant to various categories of air freight
 - relevant IATA regulations
 - supplier and/or client instructions
 - workplace checklists for acceptance of various types of freight for air transport
 - workplace procedures and instructions and job specifications.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace

conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- acceptable means of simulation assessment

AVID0009 Load and secure aviation freight and baggage

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to load and secure aviation freight and baggage in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes operating in-hold aircraft loading systems, stowing and securing aviation freight and baggage, and responding to problems in loading aviation freight and baggage.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to load handling duties of ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

- outcomes. demonstrate achievement of the element.
- 1 Operate in-hold aircraft loading systems**
 - 1.1** Pre-operational checks of in-hold aircraft loading systems are conducted in accordance with workplace procedures
 - 1.2** In-hold aircraft loading system is prepared for operation in accordance with workplace procedures and manufacturer instructions
 - 1.3** Hazards are identified, risks are assessed and hazard management implemented
 - 1.4** Appropriate personal protective equipment (PPE) is selected and worn/used as required
 - 1.5** In-hold aircraft loading system is used to facilitate loading and stowing of in-hold freight/baggage in accordance with workplace procedures, aircraft load instruction report and/or aircraft load/trim sheet, and regulatory requirements
 - 2 Stow and secure aviation freight and baggage**
 - 2.1** Correct manual handling techniques and procedures are used when stowing freight and baggage in aircraft hold in accordance with work health and safety (WHS)/occupational health and safety (OHS) requirements
 - 2.2** Freight and baggage are secured and restrained in aircraft hold in accordance with workplace procedures, aircraft manufacturer instructions and regulatory requirements
 - 2.3** Cargo hold door/s is/are secured in accordance with workplace procedures, aircraft manufacturer instructions and regulatory requirements
 - 2.4** Security seals are placed on aircraft cargo hold door/s as required in accordance with workplace procedures and regulatory requirements
 - 3 Respond to problems in loading aviation freight and baggage**
 - 3.1** Faults during loading, stowing and securing freight/baggage in aircraft hold are correctly and promptly identified and appropriate solution/s is determined in conjunction with other team members and/or load supervisor/team leader in accordance with workplace procedures and regulatory requirements
 - 3.2** In-hold aircraft loading system malfunctions are correctly and promptly identified and appropriate action

is taken to rectify and/or report problem in accordance with workplace procedures and regulatory requirements

- 3.3** Identified problem that cannot be readily resolved by load team is reported and referred to appropriate personnel

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVID2006 Load and secure aviation freight and baggage.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVID0009 Load and secure aviation freight and baggage

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant regulations, legislation and workplace procedures
- applying safe manual handling techniques
- communicating effectively with others
- completing relevant documentation
- correcting techniques for loading an aircraft in accordance with aircraft load instruction reports and/or aircraft load/trim sheets
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities dependent on differing workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communication equipment to required protocol
- reading and interpreting relevant instructions, regulations, procedures and other information
- reporting and/or rectifying any identified problems promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards, including:
 - hearing protection
 - high visibility clothing
 - protective clothing
 - safety footwear
 - safety glasses

- safety gloves
- sun protection
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- aviation freight and baggage, including:
 - air cargo/freight
 - aircraft components
 - allowable dangerous goods
 - containers/pallets loaded with freight/baggage
 - diplomatic items
 - fragile and perishable goods
 - human remains
 - live freight
 - loose freight
 - mail
 - unaccompanied baggage
 - unit load device (ULD) loaded with freight/baggage
 - valuables
- features and differences of in-hold loading systems used in various aircraft types
- layout of airport and location of aircraft gates
- manufacturer instructions for relevant in-hold loading systems
- people to be consulted about loading and securing aviation freight and baggage, including:
 - aircrew
 - check-in staff
 - ground support staff
 - load controllers
 - load supervisors, team leaders and managers
 - other members of the freight/baggage loading and ramp teams
 - technical staff
- principles and procedures relevant to trimming and balancing load on an aircraft
- principles for safely and effectively handling, loading and securing of freight and baggage into an aircraft cargo hold
- problems that may occur when loading and securing aviation freight and baggage, and appropriate action that should be taken in each case

- purpose, use and interpretation of aircraft load instruction reports and aircraft load/trim sheets
- relevant local instructions pertaining to operating in-hold loading systems and loading aircraft cargo holds
- relevant WHS and environmental procedures and regulations
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders
- hazards that may exist when loading and securing aviation freight/baggage, including:
 - climatic conditions/extreme temperature
 - dust
 - falling freight/baggage
 - fire
 - freight/baggage containing dangerous goods (declared and/or undeclared)
 - freight/baggage containing illegal substances
 - freight/baggage found to be a security risk
 - freight/baggage of unusual shape or physical size
 - heavy freight/baggage
 - incorrect lifting and manoeuvring techniques (manual handling) for type of freight/baggage concerned, usually in aircraft cargo hold confined spaces
 - incorrectly labelled freight/baggage
 - moving equipment within hold including belt loaders
 - noise
 - overweight freight and baggage
 - poorly stacked/stowed/secured freight and baggage
 - protruding surfaces in aircraft bulkhead and hold structures
 - uneven surfaces or gaps in floor of aircraft hold
- risks that exist when loading and securing aviation freight/baggage, and related risk control procedures and precautions
- workplace procedures for loading and securing freight/baggage onto an aircraft
- workplace documentation, including:
 - air waybills
 - aircraft load instruction report
 - aircraft load/trim sheets
 - conditions of service, legislation and industrial/workplace agreements and awards
 - emergency procedures
 - equipment logs/records
 - flight schedules and gate allocations
 - relevant Defence Orders and Instructions
 - induction and training materials
 - load manifests
 - manufacturer specifications and instructions for in-hold loading system for aircraft type
 - operational checklists for in-hold loading systems

- pre- and post-operational equipment checklists
- procedures for handling special freight/baggage, such as live freight, dangerous goods, oversized baggage, fragile freight/baggage and perishable freight/baggage
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders pertaining to loading and securing of aviation freight/baggage
- WHS regulations
- workplace procedures and instructions and job specifications.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- acceptable means of simulation assessment.

AVID0010 Unload aviation freight and baggage

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to unload aviation freight and baggage in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes preparing for aircraft arrival, operating in-hold aircraft loading system to unload freight and baggage, and responding to problems in unloading freight and baggage from an aircraft.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to load handling duties of flight and ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare for aircraft arrival

- 1.1** Allocated flight number is checked and off-load instruction report is obtained
- 1.2** Appropriate personal protective equipment (PPE) is selected, fitted and worn in accordance with established workplace procedures
- 1.3** Hazards are identified, risks are assessed and hazard management implemented
- 1.4** Designated aircraft bay is checked prior to aircraft arrival
- 1.5** Foreign object debris (FOD) is identified and removed
- 1.6** Pre-operational checks of aircraft unloading equipment are conducted prior to aircraft arrival
- 1.7** Aircraft unloading equipment is correctly positioned prior to aircraft arrival

2 Operate in-hold aircraft loading system to unload freight and baggage

- 2.1** Aircraft cargo hold door surrounds are checked for damage prior to opening
- 2.2** Damaged aircraft cargo hold door/s are reported in accordance with established workplace procedures
- 2.3** Aircraft cargo hold door/s are opened in accordance with established workplace procedures and manufacturer instructions
- 2.4** Aircraft in-hold system is checked prior to unloading freight and baggage
- 2.5** Aircraft is unloaded and confirmed in accordance with aircraft off-load instruction report
- 2.6** Aircraft cargo hold door/s are closed and secured in accordance with aircraft schedule and established workplace procedures
- 2.7** Security seals are placed on aircraft cargo hold door/s in

- accordance with workplace procedures and regulatory requirements
- 3 Respond to problems in unloading freight and baggage from an aircraft**
- 3.1** Faults identified during unloading of freight and baggage from aircraft cargo hold are correctly and promptly identified and appropriate solution/s is determined in conjunction with other team members and/or load supervisor/team leader in accordance with workplace procedures and regulatory requirements
 - 3.2** Malfunctions of in-hold loading system are correctly and promptly identified and appropriate action is taken to rectify and/or report problems in accordance with workplace procedures and regulatory requirements
 - 3.3** Identified problems that cannot be readily resolved by unloading team is reported and referred to appropriate personnel

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVID2007 Unload aviation freight and baggage.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVID0010 Unload aviation freight and baggage

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant regulations, legislation and workplace procedures
- applying safe manual handling techniques
- communicating effectively with others
- completing relevant documentation
- correcting techniques for unloading an aircraft in accordance with aircraft off-load instruction report
- identifying and correctly using equipment required to unload aviation freight/baggage
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information, signs and labels
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- aviation freight, including:
 - air cargo/freight
 - aircraft components
 - allowable dangerous goods
 - containers/pallets loaded with freight/baggage
 - diplomatic items
 - fragile and perishable goods
 - human remains
 - live freight
 - loose freight
 - mail
 - unaccompanied baggage
 - unit load device (ULD) loaded with freight or baggage
 - valuables
- features and differences of aircraft in-hold loading systems used in various aircraft types
- layout of airport and location of aircraft gates
- manufacturer instructions for relevant aircraft in-hold loading systems
- people to be consulted about unloading aviation freight and baggage, including:
 - aircrew
 - check-in staff
 - ground support staff
 - load controllers
 - load supervisors, team leaders and managers
 - other members of the freight/baggage loading and ramp teams
 - technical staff
- principles for safely and effectively handling and unloading freight/baggage from an aircraft cargo hold
- hazards that may exist when unloading aviation freight/baggage, including:
 - climatic conditions/extreme temperature
 - dust
 - falling freight/baggage
 - fire
 - freight/baggage containing dangerous goods (declared and/or undeclared)
 - freight/baggage containing illegal substances
 - freight/baggage found to be a security risk

- freight/baggage of unusual shape or physical size
- heavy freight/baggage
- incorrect lifting and manoeuvring techniques (manual handling) for type of freight/baggage concerned, usually in aircraft cargo hold confined spaces
- incorrectly labelled freight/baggage
- moving equipment within hold, including belt loaders
- noise
- overweight freight/baggage
- poorly stacked/stowed/secured freight/baggage
- protruding surfaces in aircraft bulkhead and hold structures
- uneven surfaces or gaps in floor of aircraft hold
- problems that may occur when unloading aviation freight/baggage, and appropriate action that should be taken in each case
- purpose, use and interpretation of aircraft off-load instruction report
- relevant local instructions pertaining to operating aircraft in-hold loading systems and unloading aircraft cargo holds
- relevant WHS and environmental procedures and regulations
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders
- documentation, including:
 - air waybills
 - aircraft load/trim sheets
 - aircraft off-load instruction report
 - conditions of service, legislation and industrial/workplace agreements and awards
 - emergency procedures
 - equipment logs/records
 - flight schedules and gate allocations
 - relevant Defence Orders and Instructions
 - induction and training materials
 - load manifests
 - manufacturer specifications and instructions for the in-hold loading system for the aircraft type
 - WHS regulations
 - operational checklists for in-hold loading systems
 - pre- and post-operational equipment checklists
 - procedures for handling special freight/baggage, such as live freight, dangerous goods, oversized baggage, fragile freight/baggage and perishable freight/baggage
 - relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders pertaining to unloading of aviation freight/baggage
 - workplace procedures and instructions, and job specifications
- risks that exist when unloading aviation freight/baggage, and related risk control procedures and precautions

- workplace procedures for unloading freight/baggage from an aircraft
- PPE, including use of:
 - hearing protection
 - high visibility clothing
 - protective clothing
 - safety footwear
 - safety glasses
 - safety gloves
 - sun protection.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- acceptable means of simulation assessment

AVIE0002 Maintain airspace interactions in remote pilot aircraft systems BVLOS operations

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to effectively maintain aircraft radio communications when operating remote pilot aircraft systems beyond visual line of sight (BVLOS) in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes operating radio equipment in Class G and controlled airspace (CTA) air spaces, managing radio equipment malfunctions and operating transponders beyond visual line of sight.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to aircraft radio operator duties of flight crew and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

E – Communication and Calculation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Operate radio equipment

1.1 Serviceability of radio equipment is confirmed

1.2 Transmission and receipt of radio communications is conducted using appropriate procedures and satellite link

1.3 A listening watch is maintained, and applicable transmissions responded to appropriately

1.4 Appropriate emergency and urgency transmissions are conducted

1.5 Appropriate radio communication protocols are used in CTA and Class G airspace

1.6 Data link equipment is operated using 3G, 4G and 5G

2 Manage radio equipment malfunctions

2.1 Radio failure procedures are performed as required

2.2 Fault-finding procedures and corrective actions not involving special tools or instruments are employed

2.3 Major system faults are reported in accordance with workplace procedures

2.4 Appropriate communications records are completed and processed in accordance with workplace procedures and aviation regulatory requirements

2.5 Remote piloted aircraft is configured to maintain safe operating conditions within controlled and uncontrolled airspace requirements during emergency procedures

3 Operate transponder

3.1 Transponder is operated and monitored in accordance with the aeronautical information publication (AIP) during normal operations

3.2 Transponder is operated and monitored in accordance with the AIP during abnormal and emergency operations

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AVIE0002 Maintain airspace interactions in remote pilot aircraft systems BVLOS operations

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria on at least one occasion and include:

- adapting to differences in equipment, operating environments and airspaces in accordance with standard operating procedures (SOPs)
- applying basic fault-finding techniques related to defective radiotelephone equipment
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- complying with regulatory requirements pertaining to aircraft radiotelephone communications
- identifying and correctly using relevant radiotelephone equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- interpreting and reacting appropriately to light signals from air traffic control (ATC)
- interpreting relevant instructions, regulations, procedures and information
- manipulating any switch or device requiring the release of flight controls without changes to height, heading, speed, attitude, exceeding engine speed revs per minute (RPM) or power limits
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- using Aviation English Language to a proficiency standard that enables requests and instructions to be understood by air traffic service and other stations, and ensures compliance with received instructions
- using oral and written English language communication skills sufficient to support situational awareness within flight radio operations
- working collaboratively with others

- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- characteristics of radio waves, wave propagation, transmission and reception, including:
 - radio frequency band ranges:
 - medium frequency (MF)
 - high frequency (HF)
 - very high frequency (VHF)
 - ultra-high frequency (UHF)
 - properties of radio waves
 - propagation of paths of radio waves:
 - ground waves
 - sky waves
 - factors affecting the propagation of radio waves:
 - terrain
 - ionosphere
 - sun spot activity
 - interference from electrical equipment
 - thunderstorms
 - power attenuation
 - radio antennas:
 - characteristics of antennas
 - use of antennas
- components of aeronautical radio systems, including:
 - power source or battery switch, radio master and microphone
 - transmitter
 - receiver
 - antenna
 - location of aerial antennas relevant to radio configuration
 - headphones and speaker
 - procedures for using an aeronautical radio system
 - setting up an aeronautical radio relevant to radio configuration
 - use of radio transmit and receive selector switches (VHF, HF, intercom (I/C) and public address (PA))
 - turning a radio on and off
 - selecting correct frequencies

- use of squelch control
- correct use of a microphone
- documented radio procedures relevant to the visual flight rules (VFR)
- emergency transponder codes for distress, radio failure and unlawful interference
- fault-finding procedures and corrective actions for radiotelephone equipment not involving special tools or instruments
- faults that may occur in radiotelephone equipment and appropriate fault detection and remedial action that can be taken
- international radio telephony distress frequencies
- light signals, including interpretation and actions required
- operating procedures for aircraft radiotelephone equipment
- phonetic alphabet
- principles of effective radio telephony communications
- problems that may occur during radio communications and action that can be taken to overcome them
- relevant sections of Civil Aviation Orders and regulations pertaining to aircraft radio communications
- relevant WHS and environmental procedures and regulations
- responsibilities of an aeronautical radio operator, including:
 - secrecy of communications
 - unauthorised transmissions
- standard radiotelephony phraseology as outlined in an aeronautical information publication (AIP)
- Class G and controlled airspace (CTA) airspace operating requirements.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

- relevant materials, tools, equipment and PPE currently used in industry.

Assessment Requirements for AVIE0003 Operate aeronautical radio

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying relevant legislation and workplace procedures
- communicating effectively under operating conditions using aviation radio telephony phraseology and communication protocols
- completing relevant documentation
- complying with regulatory requirements pertaining to aircraft radiotelephone communications
- conducting basic fault finding of defective radiotelephone equipment
- confirming serviceability of radio telephony equipment
- identifying and correctly using equipment required to maintain aircraft radio communication
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- interpreting and reacting appropriately to light signals from air traffic control
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and rectifying identified problems that may occur operating an aeronautical radio promptly
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- using Aviation English Language to a proficiency standard required by national aviation safety regulations
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of

the requirements of the elements and performance criteria and include knowledge of:

- characteristics of radio waves, wave propagation, transmission and reception, including:
 - radio frequency band ranges (medium frequency (MF), high frequency (HF), very high frequency (VHF) and ultra-high frequency (UHF))
 - properties of radio waves
 - propagation of paths of radio waves:
 - ground waves
 - sky waves

AVIE0004 Conduct radio procedures in an aviation operational environment

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to conduct radio procedures in an aviation operational environment in compliance with relevant regulatory requirements and national operating standards.

It includes identifying aviation communications system features, communicating using aviation communications technology, and maintaining aviation communications equipment systems and records.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to aviation communications duties of aviation personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

E – Communication and Calculation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Identify aviation communications system features

1.1 System features and control functions of aviation communications systems are identified

1.2 Equipment signals and alerts are monitored

1.3 Aviation communications channels are selected in accordance with aviation procedures

2 Communicate using aviation communications technology

2.1 Aviation communications systems are checked in accordance with manufacturer instructions and airport procedures

2.2 Aviation communications systems are operated in accordance with manufacturer instructions, airport procedures and regulatory requirements

2.3 Appropriate aviation communications channels are selected for location and type of communication

2.4 Clear, precise and unambiguous radio messages are sent with due regard to ethics, protocols and procedures

2.5 Aviation terminology and message structure are used when communicating using aviation communications technology

2.6 Incoming messages are received and answered promptly and courteously in accordance with operating procedures and regulatory requirements

2.7 Non-procedural terminology is used as required to assist message clarity and understanding

2.8 Aviation communications protocols and procedures are followed when using communications systems during emergencies

3 Maintain aviation communications equipment systems and records

3.1 Communications systems are maintained in working order in accordance with manufacturer instructions

- 3.2 System faults are identified and minor faults are rectified in accordance with manufacturer instructions and procedures
- 3.3 Major system faults are reported in accordance with workplace procedures
- 3.4 Appropriate communications records are completed and processed in accordance with workplace procedures and aviation regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIE2005 Conduct radio procedures in an aviation operational environment.

Assessment Requirements for AVIE0004 Conduct radio procedures in an aviation operational environment

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- completing communications records accurately in accordance with workplace procedures and aviation regulatory requirements
- changing communications channels or frequencies in accordance with workplace or aviation procedures
- communicating effectively with others using available communications equipment in accordance with aviation communications protocols and procedures
- completing relevant documentation
- diagnosing a radio fault correctly and rectifying the fault in accordance with manufacturer instructions or workplace procedures
- making broadcasts and interpreting radio messages correctly in accordance with operational policies and procedures
- following communications protocols and procedures used during emergency situations
- identifying and using required communications technology
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and understanding communications and aviation-specific terminology
- monitoring performance of communications equipment and taking appropriate action
- operating and adapting to differences in communications equipment in accordance with standard operating procedures (SOPs)
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly in accordance with workplace procedures
- responding to radio communication in accordance with aviation communications protocols and procedures
- sourcing and programming the correct aviation channels or frequencies on radio communications equipment
- using radio communications equipment used in the aviation airport environment correctly
- working collaboratively with others.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- applicable aviation communications procedures and regulations relating to radio communications at an aerodrome
- aviation communications channels and frequency bands
- aviation terminology and vocabulary
- basic communication techniques, including barriers to effective communication and how to overcome them
- basic principles of effective communication
- communications records and documentation in the aviation environment, including:
 - workplace communications procedures, protocols, checklists and instructions
 - aircraft identification codes
 - client and/or supplier instructions
 - emergency procedures
 - legislation, regulations and related documentation
 - manufacturer specifications for communications equipment
 - safety data sheets (SDSs)/material safety data sheets (MSDSs)
 - radio communication logs
- communications system operation and procedures
- features of various communications systems, including:
 - approved aviation radios:
 - personal
 - hand-held
 - citizen band (CB)
 - ultra-high frequency (UHF)
 - very high frequency (VHF)
 - single-side band (SSB)
- minor routine maintenance procedures for communications equipment
- pre-operational checks for communications systems and equipment
- procedures and protocols for using communications systems during an emergency
- protocols and procedures for communicating with others using communications technology
- typical problems that may occur when using communications systems and appropriate action and solutions, including:
 - incorrect assumption that message has been received and/or understood
 - illegible writing or print
 - misunderstanding
 - noisy environments or communications channels
 - not following correct communications protocols and procedures

- unfamiliar aviation or non-aviation terminology
- use of non-standard vocabulary
- worksite communication, including:
 - active listening
 - questioning to obtain information and/or to clarify information and understanding
 - routine oral reporting
 - two-way communication.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- acceptable means of simulation assessment.

AVIE0005 Complete a Notice to Airmen (NOTAM)

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to complete a Notice to Airmen (NOTAM) in compliance with relevant regulatory requirements and national operating standards.

It includes preparing a NOTAM and processing a NOTAM.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to aviation safety duties of aviation personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

E – Communication and Calculation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

1 Prepare a NOTAM

1.1 Situations requiring the issuing of a NOTAM are identified

1.2 Specific information required for inclusion in the NOTAM is calculated or otherwise identified in accordance with workplace procedures

1.3 NOTAM containing appropriate information, formatting, terminology and abbreviations for the notifiable situation is raised and issued to relevant authorities and/or organisations in accordance with workplace procedures and regulatory requirements

2 Process a NOTAM

2.1 Issued NOTAM is filed in accordance with workplace procedures and regulatory requirements

2.2 NOTAM is distributed to relevant personnel in accordance with workplace procedures and regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIE3003 Complete a Notice to Airmen.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIE0005 Complete a Notice to Airmen (NOTAM)

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting accurate information within National Aeronautical Information Processing System (NAIPS) system
- reporting and/or rectifying identified problems promptly in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of

the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- aerodrome operating procedures
- Aeronautical Information Package, including:
 - aerodrome diagram
 - aerodrome frequency response unit
 - aerodrome location and administration
 - air traffic services
 - ground services
 - lighting data
 - movement area data
 - navigation aids data
 - notices
 - obstacle-clear take-off gradients
 - obstacle survey areas
 - one directional runways
 - runway distance supplement
 - runway slope
 - runway strip width
 - special procedures
 - supplementary take-off distances (STODA)
 - traffic advisory frequency
 - unicom
- aircraft schedules and their use in aerodrome inspection and reporting
- issue of Notice to Airmen (NOTAM) for situations, including:
 - advanced notice of aerodrome works affecting runways or obstacle limitation surfaces (OLS)
 - bird or animal hazards posing a danger to aircraft movements
 - changes to navigational aids information
 - changes (temporary or permanent) to published information
 - failures in aerodrome lighting or obstacle lighting
 - hazards in the work area:
 - aircraft noise
 - aircraft movements
 - fumes and dust
 - jet blast
 - other vehicles in the vicinity of the aircraft
 - personnel in the vicinity of the aircraft
 - new obstacles
 - other changes of aerodrome serviceability that may affect the safety of aircraft

- operations
 - unserviceable portions of runway
- general legal responsibilities of NOTAM originating personnel and organisations
- problems that may occur when completing a NOTAM and appropriate action that should be taken in each case
- purpose and application of method of working plans (MOWPs)
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders pertaining to completing a NOTAM
- relevant WHS and environmental procedures and regulations
- reporting procedures and basic operation of the NAIPS system
- safety hazards and risks that exist when completing a NOTAM and related risk control procedures and precautions
- information in a NOTAM request using the Airservices template, including:
 - date of issue of the NOTAM
 - name of aerodrome
 - period of validity
 - purpose of the NOTAM
- 24-hour system or Universal Coordinated Time (UTC).

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant materials, tools, equipment and personal protective equipment currently used in industry.
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- acceptable means of simulation assessment.

AVIE0006 Maintain aircraft radio communications

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to maintain aircraft radio communications in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes operating radio equipment, managing radio equipment malfunctions and operating transponders.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to aircraft radio operator duties of flight crew and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

E – Communication and Calculation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

- | | |
|--|--|
| 1 Operate radio equipment | 1.1 Serviceability of radio equipment is confirmed |
| | 1.2 Transmission and receipt of radio communications is conducted using appropriate procedures and phraseology |
| | 1.3 A listening watch is maintained and applicable transmissions responded to appropriately |
| | 1.4 Appropriate emergency and urgency transmissions are conducted |
| 2 Manage radio equipment malfunctions | 2.1 Radio failure procedures are performed as required |
| | 2.2 Fault-finding procedures and corrective actions not involving special tools or instruments are employed |
| 3 Operate transponder | 3.1 Aircraft transponder is operated and monitored in accordance with the aeronautical information publication (AIP) during normal operations |
| | 3.2 Aircraft transponder is operated and monitored in accordance with the AIP during abnormal and emergency operations |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIE4001 Maintain aircraft radio communications.

Assessment Requirements for AVIE0006 Maintain aircraft radio communications

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying basic fault-finding techniques related to defective radiotelephone equipment
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- complying with regulatory requirements pertaining to aircraft radiotelephone communications
- identifying and correctly using relevant radiotelephone equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- interpreting and reacting appropriately to light signals from air traffic control
- interpreting relevant instructions, regulations, procedures and information
- manipulating any switch or device requiring the release of flight controls without changes to height, heading, speed, attitude, exceeding engine speed revs per minute (RPM) or power limits
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- using Aviation English Language to a proficiency standard that enables requests and instructions to be understood by air traffic service and other stations, and ensures compliance with received instructions
- using oral and written English language communication skills sufficient to support situational awareness within flight radio operations
- working collaboratively with others

- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- characteristics of radio waves, wave propagation, transmission and reception, including:
 - radio frequency band ranges:
 - medium frequency (MF)
 - high frequency (HF)
 - very high frequency (VHF)
 - ultra-high frequency (UHF)
 - properties of radio waves
 - propagation of paths of radio waves:
 - ground waves
 - sky waves
 - factors affecting the propagation of radio waves:
 - terrain
 - ionosphere
 - sun spot activity
 - interference from electrical equipment
 - thunderstorms
 - power attenuation
 - radio antennas:
 - characteristics of antennas
 - use of antennas
- components of aeronautical radio systems, including:
 - power source or battery switch, radio master and microphone
 - transmitter
 - receiver
 - antenna
 - location of aerial antennas relevant to radio configuration
 - headphones and speaker
 - procedures for using an aeronautical radio system
 - setting up an aeronautical radio relevant to radio configuration
 - use of radio transmit and receive selector switches (VHF, HF, intercom (I/C) and public address (PA))
 - turning a radio on and off
 - selecting correct frequencies

- use of squelch control
- correct use of a microphone
- documented radio procedures relevant to the visual flight rules (VFR)
- emergency transponder codes for distress, radio failure and unlawful interference
- fault-finding procedures and corrective actions for radiotelephone equipment not involving special tools or instruments
- faults that may occur in radiotelephone equipment and appropriate fault detection and remedial action that can be taken
- international radio telephony distress frequencies
- light signals, including interpretation and actions required
- operating procedures for aircraft radiotelephone equipment
- phonetic alphabet
- principles of effective radio telephony communications
- problems that may occur during radio communications and action that can be taken to overcome them
- relevant sections of Civil Aviation Orders and regulations pertaining to aircraft radio communications
- relevant WHS and environmental procedures and regulations
- responsibilities of an aeronautical radio operator, including:
 - secrecy of communications
 - unauthorised transmissions
- standard radiotelephony phraseology as outlined in an aeronautical information publication (AIP).

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant materials, tools, equipment and currently used in industry
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- acceptable means of simulation assessment.

AVIE5002 Apply air traffic control communication procedures and services

Modification History

Release 2. ISC upgrade - a statement relevant to Defence Aviation has been added to the Application of the unit.

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to apply air traffic control communication procedures and services, in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority and national operating standards.

It includes communicating accurate operational messages, and providing timely and accurate operational information and coordination. It also includes issuing and coordinating traffic information and responding to pilot requests.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to air traffic control duties that complement the non-technical skills of air traffic controllers, and contribute to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military air traffic services across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Use for Defence Aviation is to be in accordance with relevant Defence Orders, Instructions, Publications and Regulations.

Pre-requisite Unit

Not applicable.

Competency Field

E – Communication and Calculation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Communicate accurate operational messages

2 Provide timely and accurate operational information and coordination

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Communication is delivered clearly, timely and accurately

1.2 Standard phrases are used as required

1.3 Unambiguous and concise non-standard phrases are used

1.4 Active listening watch is maintained for all communications channels

1.5 Readbacks are provided and obtained

1.6 Delivery of voice messages is adjusted to suit receiver

1.7 Messaging protocols are followed

1.8 Most effective communications method is used

1.9 Handover or takeover is performed to achieve continuity of teamwork and service

2.1 Position and navigation information is provided

2.2 Meteorological information is provided

2.3 Changes in operational status of aids to navigation, air routes and airspaces affecting flight operations are provided

2.4 Changes in operational status of communications

facilities affecting flight operations are provided

2.5 Flight hazard alerts are issued

2.6 Flight safety alerts are issued

2.7 Operational information is coordinated and recorded

3 Issue and coordinate traffic information

3.1 Traffic information is issued

3.2 Traffic avoidance advice is issued

3.3 Traffic information is coordinated

4 Respond to pilot requests

4.1 Sufficient information is obtained from relevant sources to determine nature and implications of pilot request

4.2 Appropriate response is made to pilot requests

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Relevant legislative and regulatory requirements must include:

- Airservices Act 1995
- Civil Aviation Act 1988 and the Civil Aviation Amendment Act 1995
- Civil Aviation Safety Regulations (CASR) and Manual of Standards (MOS)
- Defence Orders and Instructions
- International Civil Aviation Organization (ICAO) Standards and Recommended Practices (SARP)
- national and state/territory work health and safety (WHS)/occupational health and safety (OHS) legislation and regulations

Unit Mapping Information

This unit replaces and is equivalent to AVIE5002B Apply air traffic control communication procedures and services.

Links

Companion Volume implementation guides are found in VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIE5002 Apply air traffic control communication procedures and services

Modification History

Release 2. ISC upgrade - a statement relevant to Defence Aviation has been added to the Application of the unit.

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- allocating attention according to priorities
- communicating clearly and concisely with others
- communicating in a team by exchanging information through assigning responsibility, and acknowledging, inquiring and challenging communications errors
- formulating and issuing communications messages and questions
- interpreting and following operational instructions
- interpreting and recording messages
- listening actively
- modifying communications dependent on workplace contingencies, situations and environments
- perceiving and comprehending incoming information
- prioritising responses in accordance with operational procedures
- reporting and/or rectifying identified problems promptly
- reading and interpreting relevant instructions, regulations, procedures and other information
- relaying communications with required attention to detail
- using standard and non-standard radiotelephony and coordination phrases
- using communications facilities to maintain contact with airspace users
- using most appropriate form of communication for the operational context.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- barriers to communication
- communication codes, abbreviations and conventions
- communication errors
- communication techniques
- communication types
- communications associated with emergency and/or abnormal operations
- communication procedures
- coordination procedures
- effects of fatigue on effective communication
- frequencies coverage
- handover and takeover procedures
- how to read and interpret instructions, regulations, procedures and other information
- messaging formats and protocols
- principles of effective communication
- procedures to be followed in equipment/facility failure
- prompts and techniques used to assist and cue coordination and communications
- qualitative aspects of verbal communication including tone, emphasis, stress and frustration
- read back requirements
- relevant legislation and workplace procedures
- relevant sections of regulatory and operational documentation
- standard and non-standard radiotelephony and coordination phrases.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- acceptable means of simulation assessment.

AVIF0015 Apply awareness of dangerous goods and hazardous substances in the transport security environment

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to apply awareness of dangerous goods and hazardous substances in the transport security environment in compliance with relevant regulatory requirements and national operating standards.

It includes identifying appropriate legislation for transporting dangerous goods and hazardous substances, separating dangerous goods and hazardous substances and dealing with incidents involving dangerous goods and hazardous substances.

This unit addresses transport security technical skill requirements (physical, mental and task-management abilities) related to transport security duties, and contributes to safe and effective performance in complex transport security operational environments.

Operations are conducted as part of recreational, commercial, military aircraft, maritime and transport activities across a variety of operational contexts within the Australian transport security industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Identify appropriate legislation for transporting dangerous goods and hazardous substances

1.1 Legislation and organisational policies and procedures for transporting hazardous substances and dangerous goods are identified and accessed

1.2 Labelling of different types of dangerous goods and hazardous substances is identified from accessed documentation

1.3 Hazardous loads are identified from transport manifests

2 Separate dangerous goods and hazardous substances

2.1 Hazardous substances and dangerous goods class and subsidiary risk information is identified

2.2 Hazardous substances and dangerous goods are correctly separated in accordance with relevant documentation, and class and subsidiary risk information as required

3 Deal with incidents involving dangerous goods and hazardous substances

3.1 Information is obtained about dangerous goods and hazardous substances involved

3.2 Hazards are identified, risks are assessed and risk control measures are implemented

3.3 Documentation is checked for compliance with separation rules as required, in accordance with organisational procedures

3.4 Information about dangerous goods and hazardous substances is relayed to appropriate people and authorities

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This is a new unit of competence.

Links

Companion Volume Implementation Guides are found in VETNet -

Assessment Requirements for AVIF0015 Apply awareness of dangerous goods and hazardous substances in the transport security environment

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- identifying dangerous goods and hazardous substance labels
- interpreting relevant instructions, procedures, information and signs
- identifying containers and goods coding, markings and emergency information panels
- checking relevant dangerous goods and/or hazardous substances segregation in accordance with class and subsidiary risk information/documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- completing relevant documentation
- communicating effectively with others.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- relevant national, state/territory regulations and codes of practice for identifying and labelling dangerous goods and hazardous substances, including appropriate sections of the current Australian Dangerous Goods (ADG) Code and other applicable legislation
- dangerous goods/hazardous substances using labels, International Maritime Dangerous Goods (IMDG) Code markings, HAZCHEM signs and other relevant identification criteria
- problems that may arise when handling dangerous goods and hazardous substances and actions that should be taken to prevent or solve these problems
- workplace procedures for handling and storing dangerous goods/hazardous substances
- segregation requirements for dangerous goods/hazardous substances
- dangerous goods as per Civil Aviation Safety Authority (CASA) lists.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

AVIF0016 Manage network data links

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to set up and monitor networks and data links with unmanned aircraft systems beyond visual line of sight (BVLOS) in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and international aviation operating standards.

It includes maintaining aviation communication and data links, managing routine and emergency airborne situations.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to aircraft operational duties of flight dispatch and flight operations support personnel, and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

Y – Aircraft Operations and Traffic Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Set up aviation networks and data links

1.1 The extent of the network to be set up is determined from flight plan and/or in consultation with appropriate persons.

1.2 Data network links are set up using a range of appropriate transmitting and receiving methods and protocols

1.3 Consideration is given to the technical factors that will have an impact on the network connections

1.4 Risk management strategies are determined with relevant team members where available

2 Maintain aviation networks and data links

2.1 Data network links are monitored and maintained throughout flight support activities using a range of appropriate transmitting and receiving methods and protocols

2.2 Voice and data communication links with emergency response agencies are monitored and maintained throughout flight using a range of appropriate transmitting and receiving methods and protocols

2.3 Aircraft position information and reports are routinely monitored and data communication links within flight support monitoring systems updated

2.4 Aircraft communication links are continuously monitored and appropriate voice and data communication failure response plans are implemented

3 Manage unanticipated airborne situations

3.1 Unanticipated severe weather penetration effects are evaluated against flight plan and amendments are made

3.2 High terrain transit performance calculations and effects on flight performance are addressed

4 Manage contingencies with networks beyond visual line of sight

4.1 Overdue position reports are responded to in accordance with regulatory and workplace requirements

4.2 Overdue at destination response actions are implemented in accordance with regulatory and workplace requirements

- 4.3 Contingency plans for aircraft power exhaustion are implemented and coordination with emergency response agencies is maintained
- 4.5 Unlawful interference with aviation and aircraft flight safety is identified and managed in accordance with regulatory and workplace requirements
- 4.6 Emergency landing procedures are implemented during aircraft emergency situations
- 4.7 Coordination and liaison with retrieval crew is maintained during aircraft emergency situations

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AVIF0016 Manage network data links

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with standard operating procedures (SOPs)
- applying precautions and required actions to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating and negotiating effectively with others
- completing documentation related to work activities
- identifying and correctly using flight support equipment, processes and procedures
- implementing and managing contingency plans for unanticipated and routine airborne situations, including:
 - aircraft power variations
 - aircraft performance
 - effects of flight diversion over different terrain
 - unanticipated meteorological conditions
- implementing and managing contingency plans for unanticipated and emergency airborne situations, including:
 - overdue position report
 - overdue at destination
 - fuel/power exhaustion
 - inability to communicate with aircraft
 - continuing to operate in unsafe conditions
 - loss of power
 - ditching/emergency landing
 - government/air traffic control (ATC) coordination and notification
 - unlawful interference with aviation
- interpreting and following operational instructions and prioritising work
- maintaining aviation communications and data links, including:
 - data communications:
 - transmission control protocol (TCP)/internet protocol (IP)

- high frequency (HF)
- satellite
- voice communications:
 - mobile telephony
 - very high frequency (VHF)
 - ultra-high frequency (UHF)
 - HF
 - radio over IP (ROIP)
 - satellite
- modifying activities depending on differing operational dispatch contingencies, risk situations and environments
- monitoring flight performance, including:
 - power availability
 - en route weather, including winds
 - aircraft performance, including the limitations imposed by minimum equipment list (MEL) restrictions
 - perishable cargo
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and documenting unlawful interference with aviation
- reporting and/or rectifying identified problems promptly in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and work health and safety (WHS) standards
- taking action to manage unlawful interference with aviation
- working collaboratively with others when managing disruptive and unlawful behaviour within aviation operating environments
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aeronautical mobile service, including:
 - VHF band frequency utilisation
 - phonetic alphabet
 - standard words
 - call signs
 - abbreviations

- communications
- priorities:
 - distress
 - urgency
 - traffic
- practical operations
- automated aeronautical service, including:
 - telecommunications service
 - flight weather (VOLMET)
 - VHF
 - HF
 - automatic terminal information service (ATIS)
- applying relevant aeronautical knowledge to flight monitoring services
- aviation risk management processes
- contingency planning considerations for unanticipated and routine airborne situations, including:
 - aircraft power consumption variations
 - aircraft performance calculations and variations
 - effects of flight diversion over different terrain
 - unanticipated meteorological conditions, including icing conditions
- contingency planning considerations for unanticipated and emergency airborne situations, including:
 - overdue position report
 - overdue at destination
 - power exhaustion
 - inability to communicate with aircraft
 - continuing to operate in unsafe conditions
 - ditching/emergency landing
- elementary radio theory, including:
 - amplitude
 - frequency
 - period
 - wavelength
 - electromagnetic wave
 - sound wave
 - electromagnetic spectrum
 - radio spectrum:
 - very low frequency (VLF)
 - low frequency (LF)
 - medium frequency (MF)

- HF
- VHF
- UHF
- propagation of radio waves
- skip distance and hops
- D, E, and F layers
- aerials:
 - polar diagrams
 - Figure 8
 - cardioid
- modulation:
 - AM
 - FM
 - sidebands: SSB and DSB
- elementary radio transmit/receive (TX/RX)
- en route weather changes, including:
 - winds
 - weather re-routes
- fatigue risk management processes
- flight equipment failures, including:
 - effect on performance:
 - potential for diversion
 - effect on subsequent flights
 - availability of maintenance at diversion location:
 - effect on other systems
 - emergency potential
- flight monitoring resources - position reports:
 - company radio:
 - Aeronautical Radio Incorporated (ARINC) reports
 - commercial radio net reports
 - aircraft situation display (ASD)
 - departure station reports
 - destination station reports
 - air traffic control (ATC) reports
 - satellite communications (SATCOM)
- flight watch requirements, including:
 - aircraft position fixes and reporting requirements
 - en route weather and wind monitoring
 - estimated time of arrival (ETA) calculations
 - fuel/battery power performance calculations for routine and emergency airborne

situations

- identification of methods and procedures for managing unlawful interference with aviation as a flight dispatcher
- relevant state/territory regulations and requirements
- relevant WHS and environmental protection procedures and guidelines
- risks and hazards when monitoring flight performance and related actions to control the risk.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIF0017 Develop a risk management plan for beyond visual line of sight operations

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to develop a risk management plan with remote piloted aircraft systems (RPAS) for beyond visual line of sight (BVLOS) operations in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes establishing the risk management context, developing the risk management plan, managing risk and evaluating the risk management plan.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to safety management duties that complement the technical skills of aviation personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Establish risk management context in RPAS operation

- 1.1** Nature and extent of aviation operational activity, its objectives and outcomes are established within the organisational context
- 1.2** Strategic and risk management context are identified in accordance with organisational requirements
- 1.3** Stakeholders are identified and consulted to ensure their views, concerns and needs are taken into account in the risk management process
- 1.4** Criteria for assessing aviation risk are determined in accordance with workplace standards
- 1.5** Risk management criteria is determined to provide guidance on balancing risk, costs, benefits and opportunities
- 1.6** Risk management criteria are monitored, reviewed and adjusted to ensure opportunities, and current and emerging trends are reflected

2 Develop the risk management plan

- 2.1** Sources of risks are identified and consulted on to ensure full coverage
- 2.2** Risks are assessed and documented in consultation with stakeholders, and risk level thresholds are established
- 2.3** Risk controls are considered/modified and selected for acceptability
- 2.4** Risk management plan and evaluation methodology and developed and communicated to stakeholders

3 Monitor and evaluate aviation risk

- 3.1** Aviation risk management plan is implemented and monitored in accordance with workplace standards
- 3.2** Internal and external risks to outcomes are monitored and remedial actions are identified, as required, and initiated
- 3.3** Risk management plans are reviewed routinely on occurrence of events of significant importance to the

organisation and when required by regulatory practice

- 3.4 Stakeholder feedback is obtained and considered in evaluation activity
- 3.5 Recommendations for enhancing risk management plan are formulated and implemented
- 3.6 Outcomes of evaluation are effectively communicated to stakeholders

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

No equivalent unit.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIF0017 Develop a risk management plan for beyond visual line of sight operations

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- applying effective verbal/non-verbal communication techniques when engaging with internal/external stakeholders
- applying procedures relating to work health and safety (WHS) and environment in the context of aviation risk management
- applying relevant legislation, regulations and policies, including:
 - relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders) relating to safety management systems (SMSs)
 - national and state/territory WHS legislation
- delegating task responsibilities related to risk management processes
- engaging in discussion by exchanging complex oral information
- listening effectively when engaging with internal/external stakeholders
- researching and analysing the wider context affecting the aviation industry and/or organisation
- solving problems through analysis and reasoning
- explain complex, formal documents and assisting others to apply these documents in the workplace
- using appropriate formal language and style for written plans.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- risk management plan structure and content
- stakeholders in the risk management process
- evaluating risk criteria which complies with established legal requirements
- Australian and international risk management standards
- organisation risk management, including the external environment in which it operates

- aviation risk management processes, which are:
 - logical and systematic
 - applied to any strategy plan, process, program or procedure that will enable the organisation to minimise losses and to maximise opportunities
 - applied within existing aviation safety management systems (SMSs)
 - implemented to address operational and safety factors related to:
 - regulatory
 - hardware
 - environmental
 - personnel
- diversity of risks in the aviation industry
- likelihood and consequences of risks
- hierarchy of control
- importance of consultation and communication at every stage of the risk management cycle
- legal requirements, legislation, regulations, policies, procedures and guidelines relating to aviation risk management
- relevant work standards
- range of evaluation methodologies
- relationship of risk to context, i.e. how the context may define the risks
- sources of risk, including:
 - perceived
 - potential
 - actual.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIF0018 Manage risks with unmanned aerial systems (UAS) beyond visual line of sight (BVLOS)

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to manage aviation risk with unmanned aerial systems (UAS) beyond visual line of sight (BVLOS) in compliance with relevant regulatory requirements and national operating standards.

It includes establishing the risk management context, planning for risk management, managing risk and evaluating the risk management plan. Work involves managing the effects of uncertainty on objectives using a safety management system (SMS) within a variety of BVLOS remote piloted aircraft systems operational contexts within the Australian aviation industry.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to safety management duties that complement the technical skills of aviation personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry. Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Establish risk management context in BVLOS operation

- 1.1 Nature and extent of aviation operational activity, its objectives and outcomes are established within the organisational context
- 1.2 Strategic and risk management context are identified in accordance with organisational requirements
- 1.3 Stakeholders are identified and consulted to ensure their views, concerns and needs are taken into account in the risk management process
- 1.4 Criteria for assessing aviation risk are determined in accordance with workplace standards
- 1.5 Risk management criteria is determined to provide guidance on balancing risk, costs, benefits and opportunities
- 1.6 Risk management criteria are monitored, reviewed and adjusted to ensure opportunities, and current and emerging trends are reflected

2 Plan for risk management in BVLOS

- 2.1 Sources of risks are identified and consulted to ensure full coverage
- 2.2 Risks are assessed and documented in consultation with stakeholders, and risk level thresholds are established
- 2.3 Risk controls are considered/modified and selected for acceptability
- 2.4 Risk management plan and evaluation methodology are developed and communicated to stakeholders

3 Monitor and evaluate aviation risk in BVLOS

- 3.1 Aviation risk management plan is implemented and monitored in accordance with workplace standards
- 3.2 Internal and external risks to outcomes are monitored and remedial actions are identified, as required, and initiated
- 3.3 Risk management plans are reviewed routinely, on occurrence of events of significant importance to the

organisation and when required by regulatory practice

- 3.4 Stakeholder feedback is obtained and considered in evaluation activity
- 3.5 Recommendations for enhancing risk management plan are formulated and implemented
- 3.6 Outcomes of evaluation are effectively communicated to stakeholders

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AVIF0018 Manage risks with unmanned aerial systems (UAS) beyond visual line of sight (BVLOS)

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- applying effective verbal/non-verbal communication techniques when engaging with internal/external stakeholders
- applying procedures relating to work health and safety (WHS) and environment in the context of aviation risk management
- developing an aviation risk assessment, including:
 - likelihood criteria:
 - rare
 - unlikely
 - possible
 - likely
 - almost certain
 - consequence criteria:
 - negligible
 - minor
 - major
 - moderate
 - severe
- conducting aviation risk control, including hierarchy of control
- applying relevant legislation, regulations and policies, including:
 - relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders relating to safety management systems (SMS) and Manual of Standards (MOS)
 - national and state/territory WHS legislation
- delegating task responsibilities related to risk management processes
- engaging in discussion by exchanging complex oral information
- listening effectively when engaging with internal/external stakeholders
- researching and analysing the wider context affecting the aviation industry and/or

organisation

- solving problems through analysis and reasoning
- explaining complex, formal documents and assisting others to apply these documents in the workplace
- using appropriate formal language and style for written plans.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- Australian and international risk management standards
- aviation risk management processes, which are:
 - logical and systematic
 - applied to any strategy plan, process, program or procedure that will enable the organisation to minimise losses and to maximise opportunities
 - applied within existing aviation SMS
 - implemented to address operational and safety factors related to:
 - regulatory
 - hardware
 - environmental
 - personnel
- diversity of risks in the aviation industry
- importance of consultation and communication at every stage of the risk management cycle
- legal requirements, legislation, regulations, policies, procedures and guidelines relating to aviation risk management
- range of evaluation methodologies
- relationship of risk to context, i.e. how the context may define the risks
- strategic and risk management context, including:
 - organisational functions
 - political
 - operational
 - financial
 - social
 - legal
 - commercial
 - various stakeholders and clients
 - relationship between the organisation and the environment in which it operates
- sources of risk, including:
 - perceived
 - potential

- actual
- determining criteria for evaluating risk, including:
 - compliance with established legal requirements
 - consideration of cost-benefit analysis outcomes
 - establishment of risk rankings to determine levels of acceptability
- risk management plan for relevant BVLOS operation, including:
 - analysis of risks
 - likelihood
 - consequences and risk levels
 - control options selected
 - person/s responsible for implementing control options
 - performance measures
 - periodic review timetable
 - prioritised list of unacceptable risks
 - resources required
 - sources of risk and risk events
 - timeframe for implementation.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- physical areas and assets.

AVIF0019 Implement complex human factors in remote pilot aircraft systems beyond visual line of sight (BVLOS)

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to implement complex human factors in remote pilot aircraft systems (RPAS) beyond visual line of sight (BVLOS) in compliance with relevant regulatory and legislative requirements.

It includes the application of strategies to address human performance and communications skills needed to pilot effectively in BVLOS aviation environments. In addition, it includes maintaining situational awareness, assessing situations and making decisions, setting priorities, managing tasks and working with others in managing situational awareness.

In addition, it includes recognising signs of personal fatigue, employing fatigue risk management practices to minimise fatigue, and identifying fatigue in others.

This unit addresses non-technical skill requirements (mental, social and personal-management abilities) related to safety management duties of remote system operators and contributes to safe and effective performance in complex operational environments.

Operations are conducted as part of commercial and military remote operated system activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Monitor and control remote pilot aircraft systems through aircraft instrumentation systems

- 1.1 Instrumentation necessary for the maintenance of stable flight are allocated to onboard automation systems
- 1.2 Supervision and control of systems are monitored effectively and communicated to other team members
- 1.3 Mode selections for automated systems are used appropriately accounting for own personal performance
- 1.4 Communication is maintained with all flight personnel in accordance with organisation procedures and legislative requirements
- 1.5 Information necessary to perform remote pilot aircraft system functions are interpreted and used for safe operation
- 1.6 Information needed for pilot decision making is assessed for accuracy and applied to maintain command
- 1.7 Situational awareness is maintained for the duration of the flight

2 Perform pilot duties using machine-human interface

- 2.1 Controlled flight is maintained using automated systems as appropriate
- 2.2 Onboard camera is used for flight control tasks where the camera is aligned with the longitudinal axis of the remote pilot aircraft system
- 2.3 Control station is monitored and configured to assess the status of the remote pilot aircraft system to identify and respond to abnormal conditions
- 2.4 Awareness is maintained by the pilot on the status of the control station power supply and back-up as necessary
- 2.5 Remote pilot aircraft system is manoeuvred appropriately ensuring that obstacles and infrastructure

are avoided

- 2.6 Pilot vigilance is maintained fully during extended periods of low workload
- 2.7 Control of the remote pilot aircraft system is transferred effectively between pilots during extended flight operations
- 2.8 Threats and emergency situations are addressed following flight procedures ensuring the safety of people and infrastructure

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

No equivalent unit.

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIF0019 Implement complex human factors in remote pilot aircraft systems beyond visual line of sight (BVLOS)

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating in beyond visual line of sight (BVLOS) environments in accordance with standard operating procedures
- applying precautions and required action to minimise, control or eliminate identified hazards in BVLOS operations
- applying relevant legislation and workplace procedures
- communicating effectively with others
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- interpreting remote pilot aircraft systems displays
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- performing systematic scan techniques for monitoring remote pilot aircraft systems, sub-systems (equipment) and devices
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- undertaking fault finding in remote pilot aircraft systems
- using automated systems to manage workload in BVLOS operations
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- definition of human factors
- situational awareness in BVLOS operations, including:
 - adaptation to environment
 - field of view
- human-machine interface principles
- decision making and assertiveness
- instrument-only flying in BVLOS
- loss of human sensing
- complacency and mode awareness in BVLOS operations
- fatigue and fatigue risk management
- control station interface with remote pilot aircraft systems
- stages of flight and human-machine interface
- contingency procedures in event of emergency
- communication in single and multi-crew BVLOS operations, including:
 - flight team members
 - observers
 - other pilots
 - air traffic control (ATC) where required
- data links and maintaining connectivity
- loss of natural sensing in pilot duties
- pilot error in BVLOS
- threat and error management (TEM)
- collision avoidance and separation procedures
- perceptual illusions or distortions related to onboard cameras
- response times to external data from remote pilot aircraft systems
- data link management
- reliance on automation
- BVLOS remote pilot responsibilities
- navigation in remote pilot BVLOS operations
- WHS procedures and relevant regulations
- Civil Aviation Safety Authority (CASA) Manual of Standards (MOS) regulations.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the

time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIF0020 Manage human factors and situational awareness in an aviation operational environment

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to manage human factors and situational awareness in an aviation operational environment in compliance with relevant regulatory, requirements and organisational practices.

It includes managing human performance and communicating effectively within an aviation environment. It also includes maintaining situational awareness, assessing situations and making decisions, setting priorities and managing tasks, and working with others in managing situational awareness.

This unit addresses non-technical skill requirements (mental, social and personal-management abilities) related to safety management duties of aviation operators and contributes to safe and effective performance in complex operational environments.

Operations are conducted as part of aviation operational activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Manage human performance

1.1 Pre- and post-operational personal condition is managed to ensure safe and effective performance

1.2 Individual performance when conducting system operations is monitored against workplace standards, procedures and requirements

1.3 Degradation of physiological condition is recognised and appropriate strategies are implemented to ensure safe task outcome

1.4 Degradation of psychological condition is recognised and appropriate strategies are implemented to ensure safe task outcome

1.5 Sources of stress are identified and managed to maintain a safe operating environment

1.6 Limitations to personal performance are communicated to others where necessary to maintain a safe operating environment

2 Communicate effectively

2.1 Effective listening skills are applied

2.2 Questions are used to gain additional information and to clarify understanding

2.3 Information received is clarified as required, interpreted, and accurately communicated or reported with due observation of ethics and protocols required of the operational environment

2.4 Communication is undertaken in varying situations with culturally diverse, familiar and unfamiliar individuals, teams and crews

2.5 Appropriate protocols and procedures are followed when using communications systems during routine and contingency operations

2.6 Responses are sought from and provided to others in a timely manner

- 3 Maintain situational awareness**
 - 3.1** Continuous monitoring of all critical factors relevant to the safe completion of task is undertaken
 - 3.2** Effective visual scan is applied, crew interaction is maintained, and radio, inter-crew communication, traffic information and remote system controls are used appropriately
 - 3.3** Trends towards unsafe situations are recognised and appropriate corrective action is employed in accordance with workplace procedures and regulatory requirements
 - 3.4** Breakdown in situational awareness is identified and appropriate corrective action is implemented to regain control
- 4 Assess situations and make decisions**
 - 4.1** Operational threats, errors and undesired system states are identified and analysed
 - 4.2** Operational risks are assessed and reported in accordance with workplace procedures and regulatory requirements
 - 4.3** Potential solutions are identified and control measures are determined and implemented
 - 4.4** Determined plan of action is communicated and tasks are allocated to others as appropriate
 - 4.5** Plan of action is implemented and monitored to achieve optimum outcomes
 - 4.6** Plan of action and implementation process are re-evaluated and amended as required to achieve optimum task outcomes
 - 4.7** Extended operational changes resulting from action plan and related risks are monitored and managed to ensure a safe task outcome
- 5 Set priorities and manage tasks**
 - 5.1** Priorities and workload are organised to ensure completion of all tasks relevant to operational safety
 - 5.2** Safe and effective operation of the remote system is prioritised ahead of competing tasks
 - 5.3** Critical events and tasks are anticipated and managed to ensure completion within available time constraints

- 5.4 System automation is used to reduce workload and to improve ability to perform mental and manipulative activities safely
 - 5.5 Fixation on single actions/functions is minimised
 - 5.6 Degraded human performance factors are identified and appropriate actions are taken to manage degraded performance of self or in others when necessary
- 6 Work with others in managing situational awareness**
- 6.1 Collaboration with others is undertaken to ensure safe completion of task
 - 6.2 Effective and efficient communications and interpersonal relationships are established and maintained with all stakeholders to ensure safe task outcome
 - 6.3 Team members are encouraged to participate in and contribute to safe task outcome
 - 6.4 Appropriate action is taken in conjunction with others to cooperatively correct any identified unsafe situations that may develop during the task

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

No equivalent unit

Assessment Requirements for AVIF0020 Manage human factors and situational awareness in an aviation operational environment

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying effective listening techniques
- applying effective questioning techniques to obtain and clarify information while communicating with others
- identifying symptoms of deterioration in own physiological condition that might endanger the safety of operations and taking appropriate corrective action
- identifying symptoms of deterioration in own psychological condition that might endanger safety of operations and taking appropriate corrective action
- maintaining compliance with relevant regulatory requirements including avoiding alcohol and drugs before and when conducting remote system operations
- managing and controlling stress before and when conducting remote system operations
- managing aspects of lifestyle that may impact on personal performance
- managing and monitoring own physical performance
- managing and monitoring own psychological performance
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, regulations, procedures, information and signs
- recognising degraded human performance factors and applying appropriate management techniques
- setting priorities and managing workload to ensure safe task completion in available time
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aspects of lifestyle that may adversely influence personal physiological condition
- aspects of lifestyle that may adversely influence personal psychological condition

- decision-making processes relevant to remote system operations
- effective communication techniques
- effects of stress on human performance and ways of managing and controlling stressors that may impact on remote system operations, including:
 - concepts of fatigue
 - environmental stress symptoms, causes and effects
 - ergonomics of control systems and instruments
 - principles of stress management
 - short- and long-term stressor effects on performance
 - stress and arousal interaction
- factors that may influence human performance during remote system operations
- human performance and its limitations
- the senses, memory and situational awareness
- relevant work health and safety (WHS) and regulations applicable to remote system operations
- relevant sections of national regulatory and legislative requirements, including:
 - human factors limitations
 - physical examination requirements
 - medical clearances, where necessary
- requirements for reporting and documenting safety incidents and safety critical errors that may have occurred during a remote system operation
- team coordination, including:
 - basic principles of team coordination
 - verbal and non-verbal communication factors
 - barriers to communication
 - listening skills
 - assertion skills
 - factors affecting decision-making processes
 - poor team coordination factors
- communication, including:
 - attitude
 - personality
 - judgement
- leadership style
- leadership qualities
- visual scanning techniques.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIF0021 Manage human factors in remote pilot aircraft systems operations

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to manage human factors in remote pilot aircraft systems (RPAS) operations, in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes managing personal performance, communicating effectively within an aviation environment, and recognising threats and errors.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to safety management duties of flight operations personnel, and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Manage human performance

1.1 Individual performance when conducting remote system operations is monitored against operational requirements

1.2 Degradation of physiological condition is recognised and appropriate strategies implemented to ensure safe outcome

1.3 Signs of stress are identified and managed to maintain a safe operating environment

1.4 Limitations to personal performance are communicated to others where necessary to maintain a safe operating environment

1.5 Signs of personal fatigue are identified and managed to maintain a safe operating environment

2 Communicate effectively

2.1 Effective listening skills are applied

2.2 Questions are used to gain additional information and to clarify understanding of remote pilot aircraft system mission

2.3 Information received is clarified, as required, interpreted and accurately communicated or reported with due observation of the operational environment

2.4 Communication is undertaken in varying situations with culturally diverse, familiar and unfamiliar individuals, teams and crews

2.5 Appropriate protocols and procedures are followed when using communications systems during routine and contingency remote system operations

2.6 Effective communication is maintained with stakeholders

3 Recognise and respond to actual and potential threats and errors

3.1 Potential environmental or operational threats and errors that are likely to affect the safety of RPAS flight are recognised

3.2 Hazards are identified, risks are assessed and hazard

management is implemented

- 3.3 Actual environmental or operational threats that affect the safety of RPAS flight are recognised
- 3.4 Competing operational priorities and task demands that may represent a threat to the safety of RPAS flight are identified
- 3.5 Threat countermeasures are identified and implemented
- 3.6 RPAS flight progress and effect of countermeasures are monitored and assessed to ensure a safe outcome
- 3.7 Alternative countermeasures are identified and implemented, and effectiveness of countermeasures are re-evaluated
- 3.8 Checklists and standard operating procedures are implemented to prevent RPAS handling, procedural or communication errors
- 3.9 Committed errors are identified and responded to before aircraft enters an undesired state
- 3.10 RPAS are monitored using a systematic scan technique to collect and analyse flight information for potential or actual error recognition purposes
- 3.11 RPAS operating environment is monitored to collect and analyse flight information for potential or actual error recognition purposes
- 3.12 Own performance is self-monitored to recognise potential or actual error occurrence
- 3.13 Countermeasure implementation is undertaken to prevent or correct errors before RPAS enters an undesired state
- 3.14 Countermeasure implementation is undertaken to prevent or correct errors after RPAS enters an undesired state

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces but is equivalent to AVIF0013 Manage human factors in remote pilot aircraft systems operations.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIF0021 Manage human factors in remote pilot aircraft systems operations

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures
- applying effective listening techniques when managing human factors in remote pilot aircraft systems (RPAS) operations
- applying effective questioning techniques to obtain information and clarify information while communicating with others
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant air safety practices and regulations
- communicating effectively with others
- identifying symptoms of deterioration in own physiological condition that might endanger the safety of RPAS operations and taking appropriate corrective action
- identifying symptoms of deterioration in own psychological condition that might endanger safety of RPAS operations and taking appropriate corrective action
- identifying and rectifying undesired RPAS states:
 - incorrect RPAS configuration associated with a reduced margin of safety
 - inappropriate RPAS flight mode awareness and selection
 - misapplication of flight controls
 - pilot induced aircraft position
 - pilot induced speed deviation
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- maintaining compliance with relevant regulatory requirements including avoiding alcohol and drugs before and when conducting RPAS operations
- managing and controlling stress before and when conducting RPAS operations
- managing aspects of lifestyle that may impact on personal performance
- managing and monitoring own physical performance
- managing and monitoring own psychological performance
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action

- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, regulations, procedures, information and signs
- recognising and responding to actual and potential RPAS threats and errors
- recognising signs of fatigue and applying appropriate fatigue management techniques
- reporting or rectifying problems, faults or malfunctions promptly, in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- setting priorities and managing workload to ensure safe task completion in available time
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aeronautical decision-making processes relevant to RPAS operations
- aspects of lifestyle that may adversely influence personal physiological condition
- aspects of lifestyle that may adversely influence personal psychological condition
- crew coordination:
 - basic principles of crew coordination
 - verbal and non-verbal communication factors
 - barriers to communication
 - listening skills
 - assertion skills
 - factors affecting decision-making processes
 - communication:
 - attitude
 - personality
 - judgement
 - leadership style
 - leadership qualities
 - poor crew coordination factors
- effective communication techniques
- effects of stress on personal performance and ways of managing and controlling stressors that may impact on RPAS operations:
 - concepts of fatigue
 - environmental stress symptoms, causes and effects
 - ergonomics of control systems and instruments

- principles of stress management
- short- and long-term stressor effects on performance
- stress and arousal interaction
- error management, including error types, causes and consequences
- human factors that may influence personal performance during RPAS operations
- human performance and its limitations, including the senses, memory and situational awareness
- in a Defence context, relevant Defence Orders and Instructions
- relevant work health and safety (WHS) procedures and regulations
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders:
 - human factors limitations
 - physical examination requirements
 - medical clearances
- requirements for reporting and documenting safety incidents and safety critical errors that may have occurred during an RPAS mission
- RPAS flight instruments visual scanning techniques
- undesired RPAS states:
 - incorrect RPAS configuration associated with a reduced margin of safety
 - inappropriate RPAS flight mode awareness and selection
 - misapplication of flight controls
 - RPAS pilot induced aircraft position
 - RPAS pilot induced speed deviation.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE)

currently used in industry.

AVIF0022 Maintain work health and safety procedures in remote pilot aircraft systems

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to maintain work health and safety (WHS) procedures in remote pilot aircraft systems (RPAS) beyond visual line of sight (BVLOS) in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes identifying and reporting hazards and risks, contributing to managing aviation WHS, and completing WHS records.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to aviation WHS duties of flight and ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Identify and report hazards and risks with BVLOS operations

1.1 BVLOS hazards and risks to operational objectives are identified

1.2 Hazard type and risk components are identified and dealt with in accordance with workplace standards and regulatory requirements

1.3 Hazards and risks in the workplace are reported to appropriate personnel in accordance with workplace procedures and regulatory requirements

1.4 Established emergency procedures and contingency plans in BVLOS operations are followed in an emergency

2 Contribute to managing aviation WHS/OHS in BVLOS operation

2.1 Fatigue risks are identified and communicated to designated personnel in accordance with workplace procedures and regulatory requirements

2.2 Other WHS issues are identified and communicated to designated personnel in accordance with workplace procedures and relevant WHS legislation

2.3 Participative contributions to WHS management in the workplace are made, in accordance with workplace procedures and provisions of relevant legislation

3 Complete WHS records

3.1 WHS records for own performance are completed in accordance with workplace requirements

3.2 WHS records and regulatory requirements for maintaining records of workplace injury and diseases are followed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

No equivalent unit

Assessment Requirements for AVIF0022 Maintain work health and safety procedures in remote pilot aircraft systems

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- applying fatigue risk management knowledge and techniques
- applying precautions and required action to minimise, control or eliminate identified hazards
- communicating effectively with others
- communicating with designated work health and safety (WHS) representatives
- implementing contingency plans
- implementing WHS procedures and relevant regulations
- interpreting and following relevant instructions, regulations, procedures and information
- modifying activities depending on operational contingencies, risk situations and environments
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- activities that may require modification in accordance with emergency situation
- common and site-specific signs and signals used for safety warnings
- definitions of a hazard and risk in relation to aviation work areas
- emergency and evacuation procedures relevant to own role

- formal and informal means of participating in promoting WHS
- hierarchy of control and own level of responsibility and process to action controls
- how to identify causes of fatigue
- how to identify WHS issues and reporting procedures for unsafe situations
- impacts of fatigue on work performance
- process for reporting PPE that is not fit for purpose
- rationale and processes for data capture through WHS documentation
- rationale and use of PPE and clothing
- regulatory requirements for reporting WHS
- reporting process for communicating fatigue risk
- reporting requirements and protocols in own workplace
- risk and consequence analysis process and controls to mitigate risks
- role and function of WHS committees, consultative committees, planning and purchasing committees
- role of aviation emergency services
- roles and functions of individuals in WHS committees
- selection and correct fitment of PPE
- safety culture and safety philosophies
- site layout and obstacles
- strategies for managing fatigue risks in an aviation workplace
- types of ground-based aviation hazards
- workplace procedures for communicating WHS issues, legislation and regulatory requirements, including:
 - dangerous goods regulations
 - general duty of care under WHS legislation
 - relevant state/territory WHS legislation
 - workers' compensation regulations
 - workplace personnel
 - workplace relations regulations
- designated personnel, including:
 - management
 - relevant nominated personnel
 - supervisors
 - team leaders
 - WHS personnel.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the

time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIF0023 Apply aircraft safety procedures

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to inspect and report on aerodrome serviceability in compliance with the relevant in compliance with relevant regulatory requirements and national standards.

It includes preparing for airside operations, operating around aircraft, implementing aviation safety emergency procedures, and reporting hazards and risk control effectiveness.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to aerodrome operations duties of ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

1 Prepare for airside operations

- 1.1 Suitable personal protective equipment (PPE) and clothing is fitted and worn correctly
- 1.2 Airside hazards are identified and appropriate risk management controls implemented
- 1.3 Airside operating conditions and restrictions, and interim instructions are confirmed and applied to individual tasks
- 1.4 Airside safety and operational briefings are received and acknowledged prior to operating around aircraft

2 Operate around aircraft

- 2.1 Airside operating conditions and requirements are implemented
- 2.2 Airside access and aviation security procedures are applied
- 2.3 Aircraft manoeuvring practices are confirmed
- 2.4 Aircraft safety hazards and zones are confirmed
- 2.5 Effective individual safety controls are implemented during operations within close proximity to aircraft
- 2.6 Normal and emergency aircraft access and egress procedures are confirmed and applied during airside operations
- 2.7 Appropriate verbal and non-verbal communication techniques are applied with flight crew and other ground personnel during routine and abnormal operations

3 Implement aviation safety emergency procedures

- 3.1 Airside incident or accident is identified and communicated to relevant personnel
- 3.2 Individual emergency response actions are taken to preserve own safety
- 3.3 Appropriate individual response actions are taken to assist other airside personnel during incidents or accidents
- 3.4 Post-incident or accident procedures are clarified and applied, and their implementation is reported to relevant personnel

- 3.5** Hazards identified are reported in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIF0001 Apply aircraft safety procedures.

Assessment Requirements for AVIF0023 Apply aircraft safety procedures

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adhering to airside operating conditions and requirements
- applying aircraft access and egress procedures, including:
 - normal
 - emergency
- applying individual airside access procedures
- applying individual aviation security procedures
- fitting and wearing aviation personal protective equipment (PPE), including:
 - eye protection
 - fire and flame-resistant clothing
 - footwear
 - hearing protection
 - high visibility clothing
- identifying and reporting airside hazards and risk control effectiveness, including:
 - ground safety:
 - noise
 - zones
 - aircraft jet blast and downwash
 - personnel, vehicle, building and aircraft proximity and safety distances
 - fuel and oil spillage
 - human factors:
 - fatigue
 - individual health
 - day and night operations
 - aircraft operations:
 - loading and unloading
 - taxiing or air transit of aircraft

- environmental:
 - natural
 - man-made
 - weather
- implementing individual aviation safety emergency procedures, including:
 - incident response
 - accident response
 - post-incident and accident actions
 - reporting
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting relevant instructions, regulations, procedures and other information
- performing airside operational tasks around aircraft
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- receiving airside briefings, including:
 - airside safety
 - airside operational tasks.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- aircraft access and egress procedures, including:
 - normal
 - emergency
- airside communication techniques, including:
 - verbal
 - non-verbal
- airside hazards, including:
 - ground safety
 - aircraft operations
 - environmental
- airside operational tasks applicable to own role:
 - aviation maintenance
 - ground support tasks
- airside safety
- flight crew
- airside operational environment, including:
 - aerodrome types

- aircraft manoeuvring practices
- airfield lightings, signals, markers and beacons
- control towers
- movement areas
- runways
- tarmacs
- vehicle movement
- correct fitment and wearing of aviation PPE:
 - eye protection
 - fire and flame-resistant clothing
 - footwear
 - hearing protection
 - high visibility clothing
- individual airside access procedures
- individual aviation security procedures
- individual aviation safety emergency procedures:
 - incident response
 - accident response
 - post-incident and accident actions
- individual risk management controls for airside operations
- hazard identification reporting procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIF0024 Provide first aid in an aviation environment

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to provide first aid in an aviation environment in compliance with relevant regulatory requirements and national operating standards.

It includes responding to an inflight emergency, applying appropriate inflight first aid procedures, communicating incident details, and evaluating incident and own performance.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to safety management duties of flight and ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aviation activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Respond to an inflight first aid emergency

- 1.1 Inflight first aid emergencies are recognised
- 1.2 Immediate hazards to health and safety of self and others are identified, assessed and managed
- 1.3 A systematic patient assessment allowing for quick identification of at-risk patients is completed
- 1.4 Situation is assessed and assistance is sought from other flight crew or aviation support services

2 Apply appropriate inflight first aid procedures

- 2.1 Cardiopulmonary resuscitation (CPR) is performed in accordance with Australian Resuscitation Council (ARC) guidelines
- 2.2 Inflight first aid is provided in accordance with established first aid principles
- 2.3 Respectful behaviour towards casualty is displayed
- 2.4 Consent from casualty is obtained where possible
- 2.5 Available aircraft resources and equipment are used to make casualty as comfortable as possible
- 2.6 First aid equipment is operated in accordance with manufacturer instructions
- 2.7 Casualty's condition is monitored continuously and responded to in accordance with first aid principles

3 Communicate incident details

- 3.1 Incident and patient details are accurately conveyed to emergency response services
- 3.2 Details of incident are reported to workplace supervisor as appropriate
- 3.3 Comprehensive patient records are completed and confidentiality of these records and information is maintained in accordance with statutory and/or organisational policies

- | | |
|---|--|
| 4 Evaluate impact of incident on own performance | 4.1 Possible psychological impacts on self and other responders involved in critical incidents are recognised |
| | 4.2 Individual needs are addressed in debriefing participation |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIF0002 Provide first aid in an aviation environment.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIF0024 Provide first aid in an aviation environment

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- communicating effectively with others
- implementing work health and safety (WHS) procedures and relevant regulations
- performing cardiopulmonary resuscitation (CPR) in accordance with Australian Resuscitation Council (ARC) guidelines, including:
 - performing at least 2 minutes of uninterrupted single rescuer CPR (5 cycles of both compressions and ventilations) on an adult resuscitation manikin placed on the floor
 - performing at least 2 minutes of uninterrupted single rescuer CPR (5 cycles of both compressions and ventilations) on an infant resuscitation manikin placed on a firm surface
 - responding appropriately in a regurgitation or vomiting
 - managing an unconscious breathing casualty
 - following single rescue procedure, including demonstrating a rotation of operators with minimal interruptions to compressions
 - following the prompts of an automated external defibrillator (AED)
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- responding to at least two inflight first aid emergencies, including:
 - conducting a visual and verbal assessment of the casualty
 - applying safe manual handling techniques
 - participating in a post-incident debrief and evaluation
 - providing an accurate verbal or written incident report.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- aircraft first aid resources and equipment, including:

- aircraft first aid kits
- aviation life support equipment
- aviation human factors, including:
 - aspects of lifestyle that may adversely influence personal physiological conditions inflight:
 - atmospheric pressure changes
 - deep vein thrombosis (DVT) and other potential physiological hazards of air flight disease
 - fatigue
 - hyperventilation
 - intoxication
 - lack of oxygen due to cabin depressurisation or problems with air supply
 - personal injury
 - physical fitness
 - physical illness
 - spatial disorientation
 - visual illusions
 - aspects of lifestyle that may adversely influence personal psychological conditions inflight:
 - mental illness
 - grief
 - trauma
 - interpersonal conflict
 - overwork
 - anxiety
 - uncontrolled fear response
 - uncontrolled stress
 - secondary effects of illness, disease or injury
- CPR techniques in accordance with ARC guidelines
- considerations when providing first aid, including:
 - airway obstruction due to body position
 - appropriate duration and cessation of CPR
 - appropriate use of an AED
 - chain of survival
 - standard precautions
 - how to conduct a visual and verbal assessment of the casualty
- legal, workplace and community considerations, including:
 - awareness of potential need for stress-management techniques and available support following a first aid emergency
 - duty of care requirements

- respectful behaviour towards a casualty
- own skills and limitations
- consent
- privacy and confidentiality requirements
- importance of debriefing
- principles and procedures for managing the following first aid scenarios:
 - allergic reaction
 - anaphylaxis
 - bleeding control
 - cardiac arrest
 - cardiovascular
 - choking and airway obstruction
 - ear, nose and throat (ENT) conditions
 - fractures, sprains and strains, using arm slings, roller bandages or other appropriate immobilisation techniques
 - musculoskeletal
 - neurological
 - pathological control
 - psychiatric
 - respiratory distress, including asthma
 - shock
 - urological
 - vasovagal
 - infectious disease
- state/territory regulations, first aid codes of practice and workplace procedures, including:
 - ARC guidelines relevant to provision of CPR and first aid
 - safe work practices to minimise risks and potential hazards
 - infection control principles and procedures, including use of standard precautions
 - requirements for currency of skills and knowledge.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIF0025 Manage human factors in flight dispatch operations

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to manage human factors in flight dispatch operations in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes managing personal performance, maintaining situational awareness, and maintaining effective communications and interpersonal relationships. It also includes recognising and managing actual and potential threats, recognising and managing actual and potential errors, recognising and managing undesired aircraft states, and assessing situations and making decisions.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to flight dispatch duties of flight operations support personnel and contributes to safe and effective performance in complex aviation operational environments.

Flight dispatch and flight support operations are conducted as part of commercial and military aviation activities across a variety of operational contexts within the Australian and international aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Manage personal performance

- 1.1** Pre- and post-operational personal condition is managed to ensure safe and effective performance
- 1.2** Individual performance when conducting flight dispatch operations is monitored against workplace standards, procedures and requirements
- 1.3** Degradation of physiological condition is recognised and appropriate strategies implemented to ensure a safe outcome of flight dispatch operations
- 1.4** Degradation of psychological condition is recognised and appropriate strategies implemented to ensure a safe outcome of flight dispatch operations
- 1.5** Sources of stress are identified and managed to maintain a safe aviation operating environment
- 1.6** Limitations to personal performance are communicated to team to maintain a safe flight dispatch operating environment

2 Maintain situational awareness

- 2.1** Flight dispatch support systems are monitored using a systematic scan technique
- 2.2** Information is collected to facilitate ongoing system management
- 2.3** Flight environment is monitored for deviations from planned operations
- 2.4** Hazards are identified, risks are assessed and hazard management implemented
- 2.5** Flight environment information is collected to update flight support operating environment

3 Maintain effective communications and interpersonal relationships

- 3.1** Effective and efficient communications and interpersonal relationships are established and maintained with all stakeholders to ensure optimum outcome of a flight
- 3.2** Effective listening skills are applied

- 3.3 Questions are used to gain additional information and to clarify understanding
 - 3.4 Responses are sought and provided to others in a timely manner
 - 3.5 Information received is clarified, as required, interpreted and accurately communicated or reported with due observation of ethics and protocols required of the operational environment
 - 3.6 Flight support objectives are defined and explained to stakeholders, including other team members, flight operations supervisors and flight crew
 - 3.7 Communication is undertaken in varying situations with culturally diverse, familiar and unfamiliar individuals, teams and crews
 - 3.8 Appropriate protocols and procedures are followed when using communications systems during routine and contingency flight dispatch operations
 - 3.9 Appropriate levels of assertiveness are applied that ensure optimum completion of a flight
- 4 Recognise and manage actual and potential threats**
- 4.1 Potential environmental or operational threats that are likely to affect flight safety are identified
 - 4.2 Actual environmental or operational threats that affect flight safety are identified
 - 4.3 Competing operational priorities and task demands that may represent a threat to flight safety are identified
 - 4.4 Countermeasures to manage threats are identified and implemented
 - 4.5 Flight progress and effect of countermeasures are monitored and assessed to ensure a safe outcome
 - 4.6 Alternative countermeasures are identified and implemented, and effectiveness of countermeasures are re-evaluated for effectiveness
- 5 Recognise and manage actual and potential errors**
- 5.1 Checklists and standard operating procedures (SOPs) are implemented to prevent aircraft handling, procedural or communications errors

- 5.2 Committed errors are identified and responded to before aircraft enters an undesired state
 - 5.3 Aircraft systems are monitored using a systematic scan technique to collect and analyse flight information for potential or actual error recognition purposes
 - 5.4 Flight operating environment is monitored to collect and analyse flight information for potential or actual error recognition purposes
 - 5.5 Individual or team performance is monitored to recognise potential or actual error occurrence
 - 5.6 Countermeasure implementation and supervision are undertaken to prevent errors before aircraft enters an undesired state
 - 5.7 Countermeasure implementation and supervision are undertaken to correct errors after aircraft enters an undesired state
- 6 Recognise and manage undesired aircraft states**
- 6.1 Undesired aircraft states are recognised
 - 6.2 Individual and team flight support tasks are prioritised to ensure an undesired aircraft state is managed effectively
 - 6.3 Corrective actions to assist flight crew recover from an undesired aircraft state are applied in a safe and timely manner
 - 6.4 Undesired aircraft states are reported and recorded as required in accordance with applicable workplace procedures
- 7 Assess situations and make decisions**
- 7.1 Problems affecting flight performance are identified and analysed
 - 7.2 Potential solutions to flight performance problems are identified
 - 7.3 Potential solutions and risks are assessed
 - 7.4 Course of action is determined and communicated to flight crew, passengers and/or other personnel, as required
 - 7.5 Tasks are allocated and actioned to implement optimal

course of action outcomes

- 7.6 Tasks are monitored for progress against determined course of action
- 7.7 Plan is re-evaluated as required to achieve optimal outcomes

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIF0003 Manage human factors in flight dispatch operations.

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIF0025 Manage human factors in flight dispatch operations

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- accepting responsibility for flight dispatch operational outcomes
- accepting responsibility for own performance
- applying effective listening techniques
- applying effective questioning techniques to obtain information and clarify information while communicating with others
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- determining and implementing appropriate threat and error countermeasures
- giving and receiving instructions related to managing human factors in flight dispatch operations
- identifying symptoms of deterioration in own physiological condition that might endanger the safety of aviation operations and taking appropriate corrective action
- implementing work health and safety (WHS) procedures and relevant regulations
- maintaining compliance with relevant regulatory requirements, including avoiding alcohol and drugs before and when conducting flight dispatch operations
- making timely operational decisions
- managing and controlling stress before and when conducting flight dispatch operations
- managing contingency flight dispatch operations, including:
 - abnormal situations
 - emergency conditions
- managing lifestyle aspects that may impact on personal performance
- modifying activities depending on workplace contingencies, situations and environments
- monitoring aircraft flight path and flight support systems to achieve desired performance using a systematic scan technique
- operating and adapting to differences in communications equipment in accordance with standard operating procedures (SOPs)
- operating effectively as a flight dispatch team member
- planning own work, predicting consequences and identifying improvements
- reporting or rectifying human factors that may occur in accordance with regulatory

requirements and workplace procedures

- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- responding appropriately to cultural differences in the workplace
- responding appropriately to feedback from other flight dispatchers or flight crew
- reporting and rectifying identified problems, faults or malfunctions promptly in accordance with workplace procedures
- selecting and using appropriate flight support instruments, displays, communications equipment and aids
- setting priorities and managing tasks
- taking initiatives and responding to changing conditions
- using appropriate normal, abnormal and emergency aviation terminology
- working collaboratively with others when managing human factors in flight dispatch operations
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- aspects of lifestyle that may adversely influence personal physiological condition
- aspects of lifestyle that may adversely influence personal psychological condition
- aspects of flight dispatch team operations that can prevent an undesired aircraft state
- effective communication techniques during normal, abnormal and emergency flight dispatch situations, including:
 - verbal and non-verbal communication
 - one and two-way communication
 - effects of different communication styles
 - miscommunication (including cultural differences)
- effective decision-making processes, including:
 - identifying problems and causal factors
 - assessing component parts systematically and logically
 - employing analytical techniques to identify solutions and considering the value and implications of each
 - generating solutions and/or alternative courses of action
 - assessing alternative solutions and risks with other flight dispatch team members
 - determining correct course of action
 - communicating decision and delegate tasks to flight crew
 - monitoring progress against agreed plan
 - evaluating decisions in accordance with changing circumstances

- ensuring decision making is improvement-focused and directed towards achieving optimum outcomes
- effects of stress on personal performance and ways of managing and controlling the various stressors that may impact on aviation operations, including:
 - concepts of fatigue
 - environmental stress symptoms, causes and effects
 - ergonomics of control systems and instruments
 - principles of stress management
 - short- and long-term stressor effects on performance
 - stress and arousal interaction
- flight dispatch team coordination principles, including:
 - assertion skills
 - barriers to effective communication
 - decision-making processes:
 - communication skills
 - personality
 - judgement
 - leadership styles
 - leadership qualities
 - listening skills
 - poor team coordination
 - verbal and non-verbal communication influences
- human factors that may influence personal performance during flight dispatch operations
- judgment and decision making, including:
 - aviation judgment concepts:
 - types of judgment
 - motor skills and human factors
 - aeronautical decision making:
 - decision-making concepts
 - pilot responsibilities
 - behavioural aspects
 - identifying hazardous attitudes:
 - physical factors
 - psychological factors
 - social influences and interface between people
 - flight support operations judgment awareness:
 - risk assessment
 - flight dispatcher stress management
 - applying decision-making concepts:
 - practical application

- managing resources
- safety awareness
- leadership management skills, including:
 - concern for performance
 - concern for people
 - democratic versus autocratic style
 - encouraging inputs and feedback
 - optimising flight crew performance in flight
 - correcting crew coordination deficiencies
- normal and emergency decision-making models to flight dispatch operations, including:
 - gather, review, assess, decide, evaluate (GRADE)
 - relay, advise, indicate, solution, emergency (RAISE)
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders related to human factors and non-technical skills
- relevant sections of CASRs and Civil Aviation Orders related to threat and error management (TEM)
- aircraft states, including:
 - incorrect aircraft systems configuration associated with a reduced margin of safety
 - inappropriate flight mode awareness and selection
 - misapplication of flight controls
 - pilot induced aircraft position
 - pilot induced speed deviation
- recognition techniques and management strategies for:
 - actual and potential threats
 - actual and potential errors
 - undesired aircraft states
- operational threats, including:
 - events that:
 - occur outside the influence of the flight crew
 - increase the operational complexity of the flight
 - require crew attention and management if safety margins are to be maintained
- errors, including:
 - individual or group actions or inactions that:
 - lead to a deviation from individual, group or organisational intentions or expectations
 - reduce safety margins
 - increase the probability of adverse operational events on the ground and/or during flight
- situational awareness models to identify real or potential environmental or operational threats to aviation safety, including:
 - perception

- comprehension
- projection
- task management, including:
 - workload organisation and priority setting to ensure optimum safe outcome of a flight
 - event planning to occur in a logical and sequential manner
 - anticipating events to ensure sufficient opportunity is available for completion
 - using technology to reduce workload and improve cognitive and manipulative activities
 - task prioritisation and protection while filtering and managing real time information
- TEM model, including:
 - principles and components of TEM
 - definition of threats
 - definition of errors
 - undesired aircraft states
 - TEM countermeasures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIF0026 Implement aviation risk management processes

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to implement aviation risk management processes in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes identifying, controlling, monitoring and reviewing the effectiveness of risk management processes as part of a safety management system (SMS).

Work involves managing the effects of uncertainty on objectives using an SMS within a variety of operational contexts within the Australian aviation industry.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to safety management duties that complement the technical skills of aviation personnel and contributes to safe and effective performance in complex aviation operational environments.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---|---|
| 1 Identify aviation hazards and assess risk | <p>1.1 Hazards are identified through organisational methods in accordance with workplace standards</p> <p>1.2 Stakeholders are identified and involved in the risk assessment process</p> <p>1.3 Likelihood and consequence of hazards are assessed and ranked against established organisational risk assessment criteria</p> |
| 2 Identify risk controls | <p>2.1 Controls that reduce risk to as low as reasonably practicable (ALARP) are identified in accordance with workplace policies and procedures</p> <p>2.2 Risk management action plan is developed and communicated to all stakeholders</p> <p>2.3 Risk management documentation is completed and checked for accuracy</p> |
| 3 Control aviation risk | <p>3.1 Risk control selections are determined with consideration of effect on stakeholders</p> <p>3.2 Risk control methods are communicated to stakeholders</p> <p>3.3 Selected risk control method/s is implemented, monitored and evaluated</p> |
| 4 Monitor and review effectiveness of risk control | <p>4.1 Implemented risk controls are regularly monitored against measures of success/effectiveness</p> <p>4.2 Assistance is provided to review risk in own area of operation</p> <p>4.3 Management of risk is continuously monitored and reviewed in own area of operation</p> <p>4.4 Review results are used to improve risk control</p> |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIF0004 Implement aviation risk management processes.

Assessment Requirements for AVIF0026 Implement aviation risk management processes

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- applying precautions and required actions to minimise and control the effects of risk when carrying out own work functions
- communicating effectively with others
- determining appropriate risk levels and control methods through effective decision making
- developing a well-researched, clear and comprehensive risk management plan
- identifying risk controls
- implementing risk management processes to safely achieve operational objectives
- reading and comprehending a variety of safety/technical texts
- researching and collecting data to monitor and evaluate risks
- solving problems to appropriately address identified risks
- using at least one of the following organisational methods to identify aviation hazards:
 - brainstorming
 - hazard reporting
 - historical occurrence data
 - internal/external safety reviews
 - monitoring operational activities
 - reviewing standards, procedures and systems
 - surveys and questionnaires
- working collaboratively with others
- writing, editing and proofreading documents to ensure clarity of meaning, accuracy and consistency of information.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- Australian and international risk management standards

- aviation hazard identification methods
- aviation risks, including:
 - regulatory
 - hardware
 - environmental
 - personnel
- likelihood criteria for risk
- hierarchy of risk control, including:
 - elimination
 - substitution
 - engineered controls
 - administrative controls
 - personal protective equipment (PPE)
- consequences of risk criteria
- hierarchy of risk control methods
- key provisions of relevant national and state/territory legislation, regulations and codes of practice that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - privacy
 - environmental issues
 - work health and safety (WHS) and organisational policies and procedures relating to risk management processes and strategies, such as Defence Orders, Instructions and Publications
 - auditing requirements relating to risk management
 - safety management systems (SMSs), including Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders
- risk assessment and analysis techniques and tools
- risk management processes within an aviation SMS.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy

requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant and appropriate materials, tools, equipment and PPE currently used in industry.

Assessment Requirements for AVIF0027 Implement aviation fatigue risk management processes

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- applying precautions and required actions to minimise and control the effects of fatigue when carrying out own work functions
- applying legislative restrictions on work duties to assist in managing fatigue
- communicating effectively with others
- determining appropriate fatigue risk levels and control methods through effective decision making
- determining and appropriately managing factors external to the workplace that may affect individual fatigue
- identifying and accurately predicting the effects of duty periods and off-duty periods on individual and team/crew fatigue
- identifying controls for treating fatigue risks
- implementing fatigue risk management processes to safely achieve operational objectives
- monitoring and reviewing effectiveness of fatigue risk controls
- reading and comprehending a variety of safety/technical texts
- researching and collecting data to monitor and evaluate risks
- solving problems to appropriately address identified fatigue risks
- writing, editing and proofreading documents to ensure clarity of meaning, accuracy and consistency of information.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- Australian and international aviation fatigue risk management standards
- change management procedures
- communication techniques and strategies to assist team/crew members identify and manage fatigue
- definitions of key terms utilised within fatigue risk management processes

- effects of fatigue on workplace performance
- fatigue hazard causes, including:
 - restricted/split sleep patterns
 - multiple high workload periods across duty cycle
 - multiple sectors
 - high density airspace
 - long/extended duty cycles
 - extended wakefulness
 - circadian disruptions
 - circadian drift
 - individual workload:
 - physiological human factors
 - psychological human factors
- fatigue hazard identification procedures, including:
 - predictive
 - proactive
 - reactive
- fatigue risk likelihood
- fatigue risk assessment and analysis techniques and tools
- fatigue risk management processes within a safety management system (SMS)
- fatigue consequences
- fatigue risk control measures
- key provisions of relevant national and state/territory legislation, regulations, codes of practice, and workplace procedures related to fatigue risk management, such as:
 - Civil Aviation Orders
 - Defence Orders, Instructions and Publications
- work health and safety (WHS) procedures
- workplace standards, including current Australian Standard (AS)/New Zealand Standard (NZS) International Standard Organization (ISO) risk management standard safety promotion procedures
- security and safety implications of fatigue in the aviation workplace
- signs of fatigue in others in the aviation workplace
- sources of information on fatigue and fatigue management.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIF0028 Manage aviation risk

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to manage aviation risk, in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes establishing the risk management context, planning for risk management, managing risk and evaluating the risk management plan.

Work involves managing the effects of uncertainty on objectives using a safety management system (SMS) within a variety of operational contexts within the Australian aviation industry.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to safety management duties that complement the technical skills of aviation personnel and contributes to safe and effective performance in complex aviation operational environments.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Establish risk management context

- 1.1 Nature and extent of aviation operational activity, its objectives and outcomes are established within the organisational context
- 1.2 Strategic and risk management context are identified in accordance with organisational requirements
- 1.3 Stakeholders are identified and consulted to ensure their views, concerns and needs are taken into account in the risk management process
- 1.4 Criteria for assessing aviation risk are determined in accordance with workplace standards
- 1.5 Risk management criteria is determined to provide guidance on balancing risk, costs, benefits and opportunities
- 1.6 Risk management criteria are monitored, reviewed and adjusted to ensure opportunities and current and emerging trends are reflected

2 Plan for risk management

- 2.1 Sources of risks are identified and consulted to ensure full coverage
- 2.2 Risks are assessed and documented in consultation with stakeholders, and risk level thresholds are established
- 2.3 Risk controls are considered/modified and selected for acceptability
- 2.4 Risk management plan and evaluation methodology is developed and communicated to stakeholders

3 Monitor and evaluate aviation risk

- 3.1 Aviation risk management plan is implemented and monitored in accordance with workplace standards
- 3.2 Internal and external risks to outcomes are monitored and remedial actions are identified, as required, and initiated
- 3.3 Risk management plans are reviewed routinely, on occurrence of events of significant importance to the

organisation and when required by regulatory practice

- 3.4 Stakeholder feedback is obtained and considered in evaluation activity
- 3.5 Recommendations for enhancing risk management plan are formulated and implemented
- 3.6 Outcomes of evaluation are effectively communicated to stakeholders

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIF0006 Manage aviation risk.

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIF0028 Manage aviation risk

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- applying effective verbal/non-verbal communication techniques when engaging with internal/external stakeholders
- applying procedures relating to work health and safety (WHS) and the environment in the context of aviation risk management
- applying relevant legislation, regulations and policies, such as:
 - relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders) relating to safety management systems (SMSs)
 - Defence Orders and Instructions
 - national, state/territory WHS legislation
- developing a risk management plan that must include:
 - analysis of risks – likelihood, consequences and risk levels
 - control options selected
 - person/s responsible for implementing control options
 - performance measures
 - periodic review timetable
 - prioritised list of unacceptable risks
 - resources required
 - sources of risk and risk events
 - timeframe for implementation
- delegating task responsibilities related to risk management processes
- engaging in discussion by exchanging complex oral information
- evaluating risk that:
 - comply with established legal requirements
 - consider cost-benefit analysis outcomes
 - establish risk rankings to determine levels of acceptability
- listening effectively when engaging with internal/external stakeholders
- researching and analysing the wider context affecting the aviation industry and/or organisation

- solving problems through analysis and reasoning
- explaining complex, formal documents and assisting others to apply these documents in the workplace
- using appropriate formal language and style for written plans.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- Australian and international risk management standards
- aviation risk assessment, including:
 - likelihood criteria:
 - rare
 - unlikely
 - possible
 - likely
 - almost certain
 - consequence criteria:
 - negligible
 - minor
 - major
 - moderate
 - severe
- hierarchy of control
- aviation risk management processes, which are:
 - logical and systematic
 - applied to any strategy plan, process, program or procedure that will enable the organisation to minimise losses and to maximise opportunities
 - applied within existing aviation safety management systems (SMSs)
 - implemented to address operational and safety factors related to:
 - regulatory
 - hardware
 - environmental
 - personnel
- organisational context, including:
 - key organisational operational elements and services
 - official resources vital to the operation of the organisation, including physical areas and assets
 - organisation, how it is organised and its capabilities
- strategic and risk management context, including:

- organisational functions:
 - political
 - operational
 - financial
 - social
 - legal
 - commercial
 - various stakeholders and clients
- relationship between the organisation and the environment in which it operates
- air traffic control (ATC)
- relevant personnel, including:
 - clients
 - contractors
 - employees
 - financial agencies
 - government agencies
 - managers
 - non-government organisations
 - public
 - regulatory agencies
 - safety management organisations
 - suppliers
 - service providers
 - unions
 - stakeholders
- diversity of risks in the aviation industry
- importance of consultation and communication at every stage of the risk management cycle
- legal requirements, legislation, regulations, policies, procedures and guidelines relating to aviation risk management
- workplace standards, including AS/NZ ISO 31000:2018 Risk management - Guidelines or as amended/updated
- range of evaluation methodologies
- relationship of risk to context i.e. how the context may define the risks
- sources of risk, including:
 - perceived
 - potential
 - actual
- evaluation methods.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIF0029 Implement threat and error management strategies

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to implement threat and error management (TEM) strategies in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes recognising and managing actual and potential threats, recognising and managing actual and potential errors, and recognising and managing undesired aircraft states.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) of flight crew and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.	demonstrate achievement of the element.
1 Recognise and manage actual and potential threats	1.1 Potential environmental or operational threats likely to affect flight safety are identified
	1.2 Actual environmental or operational threats that affect flight safety are identified
	1.3 Competing operational priorities and task demands that may represent a threat to flight safety are identified
	1.4 Countermeasures to manage threats are identified and implemented
	1.5 Flight progress and effect of countermeasures are monitored and assessed to ensure a safe outcome
	1.6 Alternative countermeasures are identified and implemented, and effectiveness of countermeasures is re-evaluated for effectiveness
2 Recognise and manage actual and potential errors	2.1 Checklists and standard operating procedures (SOPs) are implemented to prevent aircraft handling, procedural or communication errors
	2.2 Committed errors are identified and responded to before aircraft enters an undesired state
	2.3 Aircraft systems are monitored using a systematic scan technique to collect and analyse flight information for potential or actual error recognition purposes
	2.4 Flight operating environment is monitored to collect and analyse flight information for potential or actual error recognition purposes
	2.5 Individual or team performance is monitored to recognise potential or actual error occurrence
	2.6 Countermeasure implementation and supervision are undertaken to prevent errors before aircraft enters an undesired state
	2.7 Countermeasure implementation and supervision are undertaken to correct errors after aircraft enters an undesired state
3 Recognise and manage undesired aircraft states	3.1 Undesired aircraft states are recognised

- 3.2 Individual and team tasks are prioritised to ensure an undesired aircraft state is managed effectively
- 3.3 Corrective actions to recover from an undesired aircraft state are applied in a safe and timely manner
- 3.4 Undesired aircraft states are reported and recorded as required in accordance with applicable workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIF0007 Implement threat and error management strategies.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIF0029 Implement threat and error management strategies

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- applying active listening techniques to others in the operational environment
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant aeronautical knowledge
- applying relevant legislation and workplace procedures
- communicating effectively with others
- delegating duties and tasks
- determining and implementing appropriate countermeasures
- giving and receiving instructions related to implementing threat and error management (TEM) strategies
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting relevant instructions, regulations, procedures and information
- maintaining situational awareness
- making timely operational decisions
- modifying activities depending on operational contingencies, risk levels and environments
- operating and adapting to differences in communications equipment in accordance with standard operating procedures (SOPs)
- planning own work, predicting consequences and identifying improvements
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- responding to feedback from other flight or ground crew
- reporting and rectifying identified problems, faults or malfunctions promptly in accordance with workplace procedures
- supervising others when implementing TEM strategies
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- application of situational awareness to identifying real or potential environmental or operational threats to aviation safety
- aspects of multi-crew operations that can prevent an undesired aircraft state
- effective communication during normal, abnormal and emergency situations
- leadership and supervision strategies
- recognition techniques and management strategies for:
 - actual and potential threats
 - actual and potential errors
 - undesired aircraft states
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders related to TEM
- removing and mitigating errors
- removing and mitigating threats
- safety philosophies
- task management, including:
 - workload organisation and priority setting to ensure optimum safe outcome of a flight
 - event planning to occur in a logical and sequential manner
 - anticipating events to ensure sufficient opportunity is available for completion
 - using technology to reduce workload and improve cognitive and manipulative activities
 - task prioritisation and protection while filtering and managing real time information
- TEM model, including:
 - principles and components of TEM
 - definition of threats
 - definition of errors
 - undesired aircraft states
 - TEM countermeasures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace

conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIF0030 Manage safe flight operations

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to manage safe flight operations in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes maintaining an effective lookout, maintaining situational awareness, and assessing situations and making decisions. It also includes setting priorities, managing tasks and maintaining effective communications.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) for flight crew and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Maintain effective lookout

- 1.1** Systematic visual scan techniques are applied at a rate determined by traffic density, visibility and terrain to maintain traffic separation
- 1.2** Radio listening watch is maintained and transmissions are interpreted to determine traffic location and intention
- 1.3** Airspace-cleared procedures are performed before commencing any manoeuvre

2 Maintain situational awareness

- 2.1** All aircraft systems are monitored using a systematic scan technique
- 2.2** Information is collected to facilitate ongoing system management
- 2.3** Flight environment is monitored for deviations from planned operations
- 2.4** Flight environment information is collected to update planned operations

3 Assess situations and make decisions

- 3.1** Problems affecting flight performance are identified and analysed
- 3.2** Potential solutions to flight performance problems are identified
- 3.3** Potential solutions and risks are assessed
- 3.4** Course of action is determined and communicated to flight crew, passengers and/or other personnel as required
- 3.5** Tasks are allocated and actioned to implement optimal course of action outcomes
- 3.6** Tasks are monitored for progress against determined course of action
- 3.7** Plan is re-evaluated as required to achieve optimal outcomes

4 Set priorities and manage tasks

- 4.1** Task workload and priorities are organised to ensure optimum outcome of the flight

- 4.2 Events and tasks are planned to occur sequentially
 - 4.3 Events and tasks are anticipated to ensure sufficient opportunity for completion
 - 4.4 Technology is used to reduce workload and improve cognitive and manipulative activities
- 5 Maintain effective communication and interpersonal relationships**
- 5.1 Effective and efficient communication and interpersonal relationships are established and maintained with all stakeholders to ensure optimum flight outcome
 - 5.2 Objectives are defined and explained to stakeholders
 - 5.3 Appropriate levels of assertiveness are applied that ensure the optimum completion of a flight

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIF0008 Manage safe flight operations.

Assessment Requirements for AVIF0030 Manage safe flight operations

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accepting responsibility for flight outcomes
- accepting responsibility for own performance
- applying relevant aeronautical knowledge
- implementing work health and safety (WHS) procedures and relevant regulations
- managing and mitigating risk
- managing contingency flight operations, including:
 - abnormal situations
 - emergency conditions
- monitoring flight path, aircraft configuration and systems to achieve desired performance using a systematic scan technique
- operating effectively as a crew member
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- responding appropriately to cultural differences in the workplace
- selecting and using appropriate instruments, displays, communications equipment and aids
- taking initiative and responding to changing conditions
- using appropriate normal, abnormal and emergency aviation terminology.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- crew coordination, including:
 - basic principles of crew coordination
 - verbal and non-verbal communication factors
 - barriers to communication
 - listening skills
 - assertion skills

- factors affecting decision-making processes
- communication, including:
 - attitude
 - personality
 - judgement
 - leadership style
- leadership qualities
- poor crew coordination factors
- effective decision-making processes, including:
 - identifying problems and causal factors
 - assessing component parts systematically and logically
 - employing analytical techniques to identify solutions and consider the value and implications of each
 - generating solution and/or alternative courses of action
 - assessing alternative solutions and risks with other flight crew members
 - determining course of action
 - communicating decision and delegate tasks to flight crew
 - monitoring progress against agreed plan
 - evaluating decisions in accordance with changing circumstances
 - ensuring decision making is improvement-focused and directed towards achieving optimum outcomes
- fatigue risk management processes, including:
 - proactive
 - predictive
 - reactive
- flight rules, including:
 - documentation
 - aircraft nationality and registration
 - airworthiness of aircraft
 - personnel licencing
 - rules of the air
 - procedures for air navigation
 - air traffic services
 - aeronautical information service
 - aerodromes
 - facilitation
 - search and rescue
 - security
 - aircraft accidents and incidents – crew responsibilities
 - air service operations

- judgment and decision making, including:
 - pilot judgment concepts:
 - types of judgment
 - motor skills and human factors
 - aeronautical decision making:
 - decision-making concepts
 - pilot responsibilities
 - behavioural aspects
 - identification of hazardous aircraft attitudes:
 - physical factors
 - psychological factors
 - social influences and interface between people
 - pilot judgment awareness:
 - risk assessment
 - cockpit stress management
 - applying decision-making concepts:
 - practical application
 - managing resources
 - safety awareness
- task management, including:
 - workload organisation and priority setting to ensure optimum safe flight outcome
 - event planning, in a logical and sequential manner
 - anticipating events to ensure sufficient opportunity is available for completion
 - using technology to reduce workload and improve cognitive and manipulative activities
 - task prioritisation and protection while filtering and managing real time information.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations

- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIF0031 Manage threats and errors as pilot in command

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to manage threats and errors as pilot in command (PIC) in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes recognising and managing actual and potential threats, recognising and managing actual and potential errors, recognising and managing undesired aircraft states, making effective decisions, and reporting and recording operational occurrences.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) for a PIC and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently without supervision within a multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.	demonstrate achievement of the element.
1 Recognise and manage actual and potential threats	1.1 Potential environmental or operational threats likely to affect flight safety are identified
	1.2 Actual environmental or operational threats that affect flight safety are identified
	1.3 Competing operational priorities and task demands that may represent a threat to flight safety flight are identified
	1.4 Effective decisions are made to manage actual and potential threats, and countermeasure tasks are identified and allocated to appropriate flight crew members
	1.5 Flight progress and effect of countermeasures are monitored and assessed to ensure a safe outcome
	1.6 Alternative countermeasures are identified and implemented, and countermeasures are re-evaluated for effectiveness
2 Recognise and manage actual and potential errors	2.1 Checklists and standard operating procedures (SOPs) are implemented to prevent aircraft handling, procedural or communication errors
	2.2 Committed errors are identified and responded to before aircraft enters an undesired state
	2.3 Aircraft systems are monitored using a systematic scan technique to collect and analyse flight information for potential or actual error recognition purposes
	2.4 Flight operating environment is monitored to collect and analyse flight information for potential or actual error recognition purposes
	2.5 Team performance is monitored to recognise potential or actual error occurrence
	2.6 Effective decisions are made to manage actual and potential errors, and countermeasure tasks are identified and allocated to appropriate flight crew members before aircraft enters an undesired state
	2.7 Effective decisions are made to manage actual and potential errors, and countermeasure tasks are identified and allocated to appropriate flight crew members to

- correct errors after aircraft enters an undesired state
- 3 Recognise and manage undesired aircraft states**
- 3.1** Undesired aircraft states are recognised
- 3.2** Effective decisions are made to manage undesired aircraft states, and countermeasure tasks are allocated and prioritised to ensure an undesired aircraft state is managed effectively
- 3.3** Corrective actions to recover an undesired aircraft state are applied in a safe and timely manner
- 4 Make effective decisions**
- 4.1** Relevant, current and sufficient information is gathered to assess and analyse situation for decision making
- 4.2** Problem-solving strategies and techniques are used to identify and generate options
- 4.3** Decisions are made and communicated to flight crew and implemented in a timely manner in accordance with regulatory requirements and workplace procedures
- 4.4** Decisions and actions are evaluated for their effectiveness and positive outcomes
- 4.5** Decisions, their rationale and associated actions are documented and reported in accordance with regulatory requirements and workplace procedures
- 4.6** Operational decisions and actions taken to manage threats and errors are reported and recorded in accordance with appropriate workplace procedures and regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIF0009 Manage threats and errors as pilot in command.

Assessment Requirements for AVIF0031 Manage threats and errors as pilot in command

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- actively listening to others in the operational environment
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant aeronautical knowledge
- applying relevant legislation and workplace procedures
- communicating effectively with others
- delegating duties and tasks
- determining and implementing appropriate countermeasures
- giving and receiving instructions related to implementing threat and error management (TEM) strategies
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- maintaining situational awareness
- modifying activities depending on operational contingencies, risk levels and environments
- operating and adapting to differences in communications equipment in accordance with standard operating procedures (SOPs)
- planning own work, predicting consequences and identifying improvements
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting and rectifying identified problems, faults or malfunctions promptly in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- responding to feedback from other flight or ground crew
- supervising others when implementing TEM strategies
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- application of situational awareness to identify real or potential environmental or operational threats to aviation safety
- aspects of multi-crew operations that can prevent an undesired aircraft state
- multi-crew operational threats must including:
 - events or errors that:
 - occur outside the influence of the flight crew
 - increase the operational complexity of the flight
 - require crew attention and management if safety margins are to be maintained
- undesired aircraft states including:
 - incorrect aircraft systems configuration associated with a reduced margin of safety
 - inappropriate flight mode awareness and selection
 - misapplication of flight controls
 - pilot induced aircraft position
 - pilot induced speed deviation
- effective communication during normal, abnormal and emergency situations
- leadership and supervision strategies
- recognition techniques and management strategies for:
 - actual and potential threats
 - actual and potential errors
 - undesired aircraft states
- errors including:
 - individual or group actions or inactions that:
 - lead to a deviation from individual, group or organisational intentions or expectations
 - reduce safety margins
 - increase the probability of adverse operational events on the ground and/or during flight
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders related to TEM
- removing and mitigating threats
- removing and mitigating errors
- safety philosophies
- task management, including:
 - workload organisation and priority setting to ensure optimum safe outcome of the flight
 - event planning, in a logical and sequential manner
 - anticipating events to ensure sufficient opportunity is available for completion
 - using technology to reduce workload and improve cognitive and manipulative activities

- task prioritisation and protection while filtering and managing real time information
- TEM model, including:
 - principles and components of TEM
 - definition of threats
 - definition of errors
 - undesired aircraft states
 - TEM countermeasures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIF0032 Manage human factors as pilot in command

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

It includes managing individual and crew performance and communicating effectively as a PIC.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) as a PIC and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently without supervision within a multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Manage individual and crew performance

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Pre- and post-operational individual and crew condition is managed to ensure safe and effective performance

- 1.2 Individual and crew performance when conducting flight operations is monitored against workplace standards, procedures and requirements
 - 1.3 Degradation of individual or crew physiological conditions is recognised and appropriate strategies are implemented to ensure safe outcome of aviation operations
 - 1.4 Degradation of individual or crew psychological condition is recognised and appropriate strategies are implemented to ensure safe outcome of aviation operations
 - 1.5 Sources of stress are identified and managed to maintain safe aviation operating conditions
 - 1.6 Limitations to operational performance are communicated to individuals and crew to maintain safe operating conditions
- 2 Communicate effectively as PIC**
- 2.1 Effective listening skills are applied
 - 2.2 Questions are used to gain additional information
 - 2.3 Information received is clarified/confirmed, interpreted and accurately communicated or reported with due observation of ethics and protocols required of the operational environment
 - 2.4 Communication is undertaken in varying situations and with familiar and unfamiliar individuals and teams
 - 2.5 Appropriate protocols and procedures are followed when using communications systems during normal and non-normal operations
 - 2.6 Responses are sought and provided to others in a timely manner

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIF0010 Manage human factors as pilot in command.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIF0032 Manage human factors as pilot in command

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying effective listening techniques
- applying effective questioning techniques to obtain information and clarify information while communicating with others
- applying effective verbal/non-verbal communication techniques
- applying relevant aeronautical knowledge
- identifying individual or collective symptoms of deterioration in physiological and psychological conditions that might endanger the safety of flight operations and taking appropriate corrective action
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- maintaining compliance with relevant regulatory requirements, including avoiding alcohol and drugs before and when conducting flight operations
- managing and controlling individual and collective symptoms of stress before and when conducting flight operations
- managing and monitoring individual or crew physiological and psychological conditions when conducting flight operations
- managing aspects of lifestyle that may impact on individual or collective performance
- modifying activities depending on workplace contingencies, situations and environments
- monitoring individual or crew performance before and during the flight operations
- reading, interpreting and following relevant instructions, regulations, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with regulatory requirements and workplace procedures
- responding appropriately to cultural differences in the workplace
- working collaboratively with others when managing human factors as pilot in command (PIC)
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aviation medicine, including:
 - basic concepts
 - respiratory system and circulation of the blood
 - cabin pressure
- Civil Aviation Safety Regulation (CASR) Part 61 Manual of Standards (MOS) Schedule 3 Aeronautical Knowledge relevant to human factors within air transport operations
- flight operations and health, including:
 - high-altitude environment
 - physiological and mental fitness
 - incapacitation
 - intoxication
 - body rhythm disturbances
 - fatigue
 - stress and anxiety
 - general health aspects
- human behaviour, including:
 - general concepts
 - cockpit management
 - judgement and decision making
- human factors that may influence individual and collective performance during multi-crew operations
- human information processing, including:
 - general system
 - senses
 - integration of sensory inputs: spatial disorientation and illusions
 - memory
- managing and monitoring crew conditions, including:
 - crew and team composition principles
 - crew skills, knowledge and abilities
 - crew divisional, functional and leadership structures
- relevant WHS procedures and regulations
- relevant sections of (CASRs and Civil Aviation Orders pertaining to human factors and their effect on human performance.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training

Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIF0033 Manage aircraft passengers and cargo

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to manage aircraft passengers and cargo in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards

It includes managing passengers during normal operations, managing passengers during an abnormal or emergency situation, and managing cargo.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to the safety management duties of flight crew and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

1 Manage passengers during normal operations

1.1 Passengers are briefed on safety, normal and emergency procedures before flight in accordance with regulatory requirements, orders and operations manual

1.2 Passenger safety, comfort and wellbeing is provided for in accordance with regulatory requirements and workplace procedures

1.3 Passengers are managed on the ground and in the air in accordance with regulatory requirements, orders and operations manual

2 Manage passengers during an abnormal or emergency situation

2.1 Passengers are warned of potential hazardous conditions and emergencies during flight, and are briefed about related safety and emergency procedures in accordance with regulatory requirements, orders and operations manual

2.2 Passengers are advised of nature of emergency and the procedures and precautions to be followed

2.3 Clear communication is established and maintained with passengers

2.4 Passengers are managed during an emergency in accordance with regulatory requirements and workplace procedures

3 Manage cargo

3.1 Cargo is managed in accordance with regulatory requirements and workplace procedures

3.2 Cargo calculations are completed in accordance with workplace procedures and regulatory requirements

3.3 Dangerous goods are identified and procedures applied to ensure safety and security of people and cargo

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work

environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIF0011 Manage aircraft passengers and cargo.

Assessment Requirements for AVIF0033 Manage aircraft passengers and cargo

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- accepting, managing and safely handling, loading and unloading aircraft cargo as required
- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- aiding and assisting passengers appropriately during an emergency
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- briefing passengers on:
 - emergency procedures on the ground and in the air
 - flight details
 - location of emergency exits
- calculating and managing aircraft cargo as required
- communicating effectively with others when managing aircraft passengers and cargo
- completing relevant documentation
- conducting cargo calculations, including weight, balance and deck loading
- controlling cabin temperature
- indicating the location of airsickness bags
- demonstrating how to:
 - secure and release seat belts and/or safety harnesses
 - secure stowage hand luggage
- demonstrating how to use:
 - flotation devices
 - fresh air vents
 - oxygen equipment as required
 - safety equipment
- determining and applying safety and security requirements
- ensuring passengers are aware of hazardous conditions and emergencies during flight, and related safety and emergency procedures

- exercising control of passengers on the ground and in the aircraft
- explaining:
 - operation of doors and escape hatches
 - precautions to avoid interference with flight controls
 - smoking requirements
- identifying and correctly using relevant equipment
- identifying and labelling cargo
- identifying dangerous goods and applying dangerous goods procedures
- implementing contingency plans
- implementing decisions for carriage or non-carriage and management of load
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- maintaining compliance with regulatory requirements
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- operating emergency equipment applicable to flight
- organising first aid, as required, during an in-flight emergency
- reading interpreting and following relevant instructions, regulations, procedures and signs
- reporting and/or rectifying any problems, faults or malfunctions promptly in accordance with regulatory requirements and workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- understanding and anticipating the needs of passengers
- using loading and cargo securing devices
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- applicable emergency procedures
- cargo management procedures
- dangerous goods awareness
- hazards that may arise during a flight and related action that should be taken to alert passengers and advise them of precautionary measures
- local procedures for passenger movement

- managing passengers during abnormal or emergency situations
- policies and procedures for passenger safety before, during and after flight
- principles of good customer service
- problems that may occur when managing aircraft passengers and cargo, and appropriate action that should be taken in each case
- procedures for accepting, managing and calculating aircraft cargo, including dangerous goods
- regulatory requirements and workplace procedures for briefing passengers
- relevant WHS and environmental procedures and regulations
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders pertaining to briefing passengers, and managing passengers and cargo, including dangerous goods
- responsibilities and authority of a pilot in command (PIC)
- security requirements.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIF0034 Apply aviation work health and safety procedures

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to apply aviation work health and safety (WHS) procedures in compliance with relevant regulatory requirements and national operating standards.

It includes identifying and reporting hazards and risks, contributing to managing aviation WHS and completing WHS records.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to aviation WHS duties of flight and ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational and commercial aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

1 Identify and report hazards and risks

1.1 Aviation hazards and risks to operational objectives are identified

1.2 Hazard type and risk components are identified and dealt with in accordance with workplace standards and regulatory requirements

1.3 Hazards and risks in the workplace are reported to appropriate personnel in accordance with workplace procedures and regulatory requirements

1.4 Personal protective equipment (PPE) is correctly used in accordance with established safety practices and procedures

1.5 Established emergency procedures and contingency plans are followed in an emergency

2 Contribute to managing aviation WHS/OHS

2.1 Fatigue risks are identified and communicated to designated personnel in accordance with workplace procedures and regulatory requirements

2.2 WHS issues are identified and communicated to designated personnel in accordance with workplace procedures

2.3 Participative contributions to WHS management in the workplace are made in accordance with workplace procedures and provisions of relevant legislation

3 Complete WHS/OHS records

3.1 WHS records for own performance are completed in accordance with workplace requirements

3.2 WHS records and regulatory requirements for maintaining records of workplace injury and diseases are followed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work

environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIF0012 Apply aviation work health and safety procedures.

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIF0034 Apply aviation work health and safety procedures

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- applying fatigue risk management knowledge and techniques
- applying precautions and required action to minimise, control or eliminate identified hazards
- communicating effectively with others
- communicating with designated work health and safety (WHS) representatives
- implementing contingency plans
- implementing WHS procedures and relevant regulations
- interpreting and following relevant instructions, regulations, procedures and information
- modifying activities depending on operational contingencies, risk situations and environments
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- activities that may require modification in accordance with emergency situation
- common and site-specific signs and signals used for safety warnings
- definitions of a hazard and risk in relation to aviation work areas
- designated personnel, including:

- management
- relevant nominated personnel
- supervisors
- team leaders
- WHS/OHS personnel
- emergency and evacuation procedures relevant to own role
- formal and informal means of participating in promoting WHS
- hierarchy of control and own level of responsibility and process to action controls
- how to identify causes of fatigue
- how to identify WHS issues and reporting procedures for unsafe situations
- impacts of fatigue on work performance
- process for reporting PPE that is not fit for purpose
- rationale and processes for data capture through WHS documentation
- rationale and use of PPE
- relevant legislation and regulatory requirements, including:
 - dangerous goods regulations
 - general duty of care under WHS/OHS legislation
 - relevant state/territory WHS/OHS legislation
 - workers' compensation regulations
 - workplace relations regulations
- regulatory reporting requirements and processes
- regulatory requirements for reporting WHS issues
- reporting process for communicating fatigue risk
- reporting requirements and protocols in own workplace
- risk and consequence analysis process and controls to mitigate risks
- role and function of WHS committees, consultative committees, planning and purchasing committees
- role of aviation emergency services
- roles and functions of individuals in WHS committees
- selection and correct fitment of PPE
- safety culture and safety philosophies
- site layout and obstacles
- strategies for managing fatigue risks in aviation workplaces
- types of ground-based aviation hazards
- workplace procedures for communicating WHS issues.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory

requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIF0035 Manage human factors in aviation operations

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to manage human factors in aviation operations in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes managing personal performance and communicating effectively within an aviation environment.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to safety management duties of aviation personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aviation activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Manage personal performance

- 1.1** Pre- and post-operational personal condition is managed to ensure safe and effective performance
- 1.2** Individual performance when conducting aviation operations is monitored against workplace standards, procedures and requirements
- 1.3** Degradation of physiological condition is recognised and appropriate strategies are implemented to ensure safe outcome of aviation operations
- 1.4** Degradation of psychological condition is recognised and appropriate strategies are implemented to ensure safe outcome of aviation operations
- 1.5** Sources of stress are identified and managed to maintain a safe aviation operating environment
- 1.6** Limitations to personal performance are communicated to crew/team to maintain a safe aviation operating environment

2 Communicate effectively within an aviation environment

- 2.1** Effective listening skills are applied
- 2.2** Questions are used to gain additional information
- 2.3** Information received is clarified/confirmed, interpreted and accurately communicated or reported with due observation of ethics and protocols required of the operational environment
- 2.4** Communication is undertaken in varying situations with culturally diverse, familiar and unfamiliar individuals, teams and crews
- 2.5** Appropriate protocols and procedures are followed when using communications systems during routine and contingency aviation operations
- 2.6** Responses are sought and provided to others in a timely

manner

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIF0014 Manage human factors in aviation operations.

Assessment Requirements for AVIF0035 Manage human factors in aviation operations

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying effective listening techniques
- applying effective questioning techniques to obtain information and clarify information while communicating with others
- applying effective verbal and non-verbal communication techniques
- identifying symptoms of deterioration in own physiological condition that might endanger the safety of aviation operations and taking appropriate corrective action
- identifying symptoms of deterioration in own psychological condition that might endanger safety of aviation operations and taking appropriate corrective action
- implementing contingency plans
- maintaining compliance with relevant regulatory requirements, including avoiding alcohol and drugs before and when conducting aviation operations
- managing and controlling individual symptoms of stress before and when conducting aviation operations
- managing aspects of lifestyle that may impact upon personal performance
- managing and monitoring own physical performance
- managing and monitoring own psychological performance
- modifying activities depending on workplace contingencies, situations and environments
- reading, interpreting and following relevant instructions, regulations, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aspects of lifestyle that may adversely influence personal physiological condition
- aspects of lifestyle that may adversely influence personal psychological condition
- crew coordination, including:
 - basic principles of crew coordination
 - verbal and non-verbal communication factors
 - barriers to communication
 - listening skills
 - assertion skills
 - factors affecting decision-making processes
 - poor crew coordination factors
- communication, including:
 - attitude
 - personality
 - judgement
- leadership style
- leadership qualities
- effects of stress on personal performance and ways of managing and controlling the various stressors that may impact on aviation operations, including:
 - concepts of fatigue
 - environmental stress symptoms, causes and effects
 - ergonomics of control systems and instruments
 - principles of stress management
 - short and long-term stressor effects on performance
 - stress and arousal interaction
- fitness for aviation operations relevant to own role, including:
 - basic health
 - health and fitness
 - alcohol
 - drugs
 - blood donations
 - hyperventilation
 - atmospheric pressure changes
 - anatomy of the ear
 - vision, spatial disorientation and illusions
 - motion sickness
 - acceleration 'g' effects
 - toxic hazards
 - the atmosphere and associated problems
 - hypoxia
 - human factor considerations

- human factors that may influence personal performance during aviation operations
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders related to human factors and human performance
- relevant work health and safety (WHS) procedures and regulations
- aviation operations:
 - flight operations
 - flight support operations
 - ground operations
 - multi-crew
 - single pilot

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIF0036 Implement regulations and policies during aviation safety and service operations

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to implement regulations and policies during aviation safety and service operations in compliance with relevant regulatory requirements, national and international operating standards.

It includes complying with relevant regulations and legal obligations, complying with established industrial relations practices and requirements, and complying with relevant local laws and regulations.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to safety management duties of flight and ground crews and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Comply with relevant regulations and legal obligations

1.1 Sources of information on regulatory requirements and legal obligations relevant to interactive flight or ground crew operations are identified and accessed in accordance with workplace procedures

1.2 An understanding of regulatory requirements and legal obligations relevant to interactive flight or ground crew operations is developed and applied to day-to-day work

1.3 Compliance is maintained with regulatory requirements and legal obligations that bind flight or ground crew in their safety, security and operational tasks

2 Comply with established industrial relations practices and requirements

2.1 Sources of information on established industrial relations practices and requirements relevant to the aviation industry are identified and accessed in accordance with workplace procedures

2.2 An understanding of established industrial relations practices and requirements relevant to the aviation industry is developed and applied to day-to-day work

2.3 An understanding of employer/employee obligations and responsibilities is developed and applied to day-to-day work

3 Comply with relevant local laws and regulations

3.1 Quarantine and customs regulations and other local laws relevant to work activities of individual aviation work roles are correctly identified and appropriate action is taken in day-to-day work to ensure compliance as required

3.2 Appropriate advice is provided to others on customs and quarantine regulations and other relevant local laws as required

3.3 Compliance is maintained with relevant local laws and regulations when operating in international or domestic aviation environments

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIF2010 Implement regulations and policies during aviation safety and service operations.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIF0036 Implement regulations and policies during aviation safety and service operations

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- complying with established industrial relations practices and requirements
- complying with relevant local laws and regulations
- complying with relevant regulations and legal obligations
- identifying and correctly using relevant equipment
- implement contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems, including safety and security hazards, and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required standard
- reading interpreting and following relevant instructions, regulations, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- established industrial relations practices and requirements, including:
 - company or enterprise
 - state/territory legislation
 - commonwealth legislation
- relevant Civil Aviation Regulations (CARs) Civil Aviation Safety Regulations (CASRs), Civil Aviation Orders, and Manual of Standards (MOS) pertaining to integrated safety and operational responsibilities related to the individual's work role, including:
 - flight crew
 - cabin crew
 - flight support personnel
 - emergency services personnel
 - ground crew
 - maintenance personnel
- relevant WHS procedures and relevant regulations
- drug and alcohol management plan (DAMP)
- relevant local laws and regulations, including:
 - international
 - domestic.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIF0037 Monitor the transfer of hazardous materials

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to monitor the transfer of hazardous materials in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes monitoring the transfer of hazardous materials on an aerodrome and responding to a hazardous materials incident.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to safety management duties of ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

1 Monitor the transfer of hazardous materials on an aerodrome

- 1.1 Location and timing of transfer is determined
- 1.2 Hazards are identified, risks are assessed and hazard management implemented
- 1.3 Transfer of hazardous material is monitored to ensure compliance with standard operating procedures (SOPs)
- 1.4 Breaches of SOPs are logged and reported
- 1.5 Apron areas are inspected for serviceability and identified spills, leakages or damage are reported

2 Respond to a hazardous materials incident

- 2.1 Correct category of incident is determined
- 2.2 Incident is reported to appropriate emergency response agency as required
- 2.3 Safety information on handling hazardous materials is located and utilised
- 2.4 Operational procedures and equipment for responding to a hazardous materials incident are employed
- 2.5 Notice to Airman (NOTAM) advisory action is taken or cancelled as required
- 2.6 Compliance with work health and safety (WHS)/occupational health and safety (OHS) and environmental implications of a spill is maintained
- 2.7 Incident clean-up or control operations are supervised
- 2.8 Hazardous material incident register and records are maintained

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIF2012 Monitor the transfer of hazardous materials.

Assessment Requirements for AVIF0037 Monitor the transfer of hazardous materials

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- reading, interpreting and following relevant instructions, regulations, procedures, information and signs
- reporting and/or rectifying problems, fault or malfunctions promptly in accordance with workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- using spill control and response equipment
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- aerodrome layout, including access routes
- categories of hazardous materials incidents and associated response actions
- emergency procedures
- procedures for managing and controlling hazardous situations when carrying out work activities
- procedures for operating electronic communications equipment
- safety information including:
 - airport emergency plan and procedures
 - aerodrome manual
 - Australian Standards
 - logbooks
 - Notice to Airmen (NOTAM)
 - safety information and guidance material on hazardous materials
 - safety data sheets (SDSs)/material safety data sheets (MSDSs)
- hazardous materials including:
 - fuel
 - dangerous goods
 - explosives
 - ammunition
 - sewerage
- equipment including:
 - radio
 - telephone
 - vehicle with flashing light
 - markers
 - lights
 - maintenance equipment
 - barricades
 - sandbags
 - fire extinguishers
 - spills response kit
- procedures to minimise fire hazards
- relevant sections of national and state/territory regulatory requirements and codes of practice
- relevant WHS and environmental procedures and regulations
- requirements for completing relevant documentation
- safety distances required for transferring defined hazardous materials
- SOPs for monitoring the transfer of hazardous materials
- steps involved in planning work activities
- use of PPE and clean up materials for hazardous materials spills.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry

AVIF0038 Undertake aircraft underwater escape and survival

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to undertake aircraft underwater escape and survival in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes preparing for aircraft ditching, undertaking evacuation from an aircraft, conducting rescue recovery process and controlling survival hazards.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) for flight crews and passengers and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for aircraft ditching	<p>1.1 Nature and extent of aircraft situation is communicated and acknowledgment confirmed</p> <p>1.2 Personal items within the cabin are secured prior to ditching</p> <p>1.3 Restraint devices and survival equipment are checked, fastened and secured prior to ditching</p> <p>1.4 Primary and secondary egress routes, exits and equipment are located</p> <p>1.5 Brace position is adopted</p>
2 Undertake evacuation from an aircraft	<p>2.1 Spatial orientation is conducted</p> <p>2.2 Egress points are located</p> <p>2.3 Exits are jettisoned and cleared</p> <p>2.4 Restraint devices are released</p> <p>2.5 Aircraft is egressed</p> <p>2.6 Surface is cleared</p>
3 Conduct rescue recovery process	<p>3.1 Safety equipment is deployed in accordance with workplace procedures</p> <p>3.2 Position indicating and signalling devices are deployed</p> <p>3.3 Rescue recovery techniques are applied</p>
4 Control survival hazards	<p>4.1 Potential hazards are identified and controlled</p> <p>4.2 Swimming techniques with a life jacket are applied</p> <p>4.3 Hypothermia management techniques are employed</p> <p>4.4 Raft boarding and righting techniques are employed</p> <p>4.5 Emergency supplies and equipment are managed</p>

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIF2014 Undertake aircraft underwater escape and survival.

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIF0038 Undertake aircraft underwater escape and survival

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying hypothermia prevention, reduction and management techniques
- applying knowledge of aircraft escape hazards, including:
 - cold shock
 - environment
 - sea state
 - weather
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying rescue recovery techniques
- communicating effectively with others
- completing relevant documentation
- employing life jacket swimming, raft boarding and raft righting techniques
- employing position indicating and signalling devices, including:
 - flares
 - position locating beacons
 - strobe lights
- identifying and correctly using relevant equipment, including:
 - emergency breathing systems
 - flares
 - life jackets
 - life rafts
 - position locating beacons
 - restraint devices and harnesses
 - strobe lights
- implementing operational contingency loading emergency procedures, as required, in a Defence context

- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating emergency equipment
- operating safety equipment
- performing aircraft egress and exit operation
- performing inverted and submerged aircraft escape techniques
- performing life jacket swimming techniques
- performing safe swimming techniques, including:
 - surface clearing techniques
 - individual safety
 - group safety
- reading, interpreting and following relevant instructions, regulations, procedures, information and signs
- releasing restraint devices and egressing aircraft
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- securing all personal items, restraint devices and survival equipment prior to ditching
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self, others or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- restraint devices, including:
 - flight crew harnesses and restraint devices
 - operational contingency loading equipment
 - passenger seatbelts
- aircraft egress and exit systems
- aircraft escape techniques, including:
 - primary exit
 - secondary exit
 - blocked exit
- emergency equipment deployment and operation
- hazards when exiting aircraft during emergency situations

- how to identify and operate equipment required to undertake aircraft underwater escape and survival, including:
 - emergency breathing systems
 - flares
 - life jackets
 - life rafts
 - position locating beacons
 - restraint devices and harnesses
 - strobe lights
- inverted and submerged aircraft escape techniques
- manufacturer instructions for equipment used for aircraft underwater escape and survival
- operational contingency loading emergency procedures, as required, in a Defence context
- regulations, legislation, organisational policy and procedures in relation to aircraft underwater escape and survival
- relevant WHS and environmental procedures and regulations
- rescue and recovery techniques
- risks that exist when undertaking aircraft underwater escape and survival, and related risk control procedures and precautions
- safe swimming techniques, including:
 - surface clearing techniques
 - individual safety
 - group safety
- workplace procedures for undertaking aircraft underwater escape and survival
- emergency supplies and equipment, including:
 - positioning equipment
 - survival equipment

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations

- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIF0039 Utilise emergency breathing system

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to utilise an emergency breathing system (EBS) in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards. Use of this unit in non-aviation related safety roles is to be in accordance with relevant industry and national regulatory requirements.

It includes preparing an EBS for use, operating an EBS and completing EBS post-operational procedures.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to safety management duties of flight crews and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---|--|
| 1 Prepare an EBS for use | 1.1 EBS pre-flight inspection is conducted |
| | 1.2 Preparations for flight are completed |
| | 1.3 EBS defects are reported |
| 2 Operate an EBS | 2.1 EBS is fitted in accordance with equipment instructions |
| | 2.2 EBS purging techniques are employed |
| | 2.3 Breathing techniques are employed during ascent |
| | 2.4 EBS malfunctions are responded to |
| 3 Complete EBS post-operational procedures | 3.1 EBS after-use inspection is conducted |
| | 3.2 EBS after-flight defects are reported |
| | 3.3 EBS equipment is stowed in appropriate storage |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIF2015 Utilise emergency breathing system.

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIF0039 Utilise emergency breathing system

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- communicating effectively with others
- completing relevant documentation
- conducting flight preparation procedures
- conducting pre-flight inspection of the emergency breathing system (EBS), including:
 - leaks
 - visible signs of damage
- conducting emergency breathing system (EBS) malfunction and defect management and reporting procedures
- conducting inspection of EBS after use, and pack up
- conducting purging techniques for emergency breathing system must include:
 - blow-out
 - purge button
 - combination of blow-out and purge button
- identifying and correctly using relevant equipment
- implementing contingency plans in the event of a malfunction, including:
 - flooding (continual flow)
 - free flow
 - out of air
- implementing EBS operating procedures
- implementing work health and safety (WHS) procedures and relevant regulations
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- performing safety procedures for breathing compressed air underwater
- performing underwater breathing techniques
- reading, interpreting and following relevant instructions, regulations, procedures information

and signs

- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self, others or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- EBS malfunctions and defects, including their management and reporting procedures
- EBS operating procedures
- EBS pre- and post-use inspection procedures
- hazards associated with using EBS
- in a Defence context, relevant Defence Orders, Instructions, Publications and Regulations
- manufacturer instructions for emergency breathing system equipment
- organisational defect reporting procedures
- problems that may occur when utilising emergency breathing systems and appropriate action that should be taken in each case
- regulations, legislation, organisational policy and procedures in relation to emergency breathing systems
- relevant WHS and environmental procedures and regulations
- risks that exist when utilising emergency breathing systems and related risk control procedures and precautions
- underwater breathing techniques
- workplace procedures for utilising emergency breathing systems.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy

requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIF0040 Employ fatigue risk management practices in an aviation workplace

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to maintain the safety of people and aircraft in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes carrying out required safety procedures, managing safety risks and hazards, following flight crew directions, aiding and assisting passengers during an emergency, and carrying out administrative procedures.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to safety management duties of flight operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Recognise signs of personal fatigue

1.1 An understanding of personal fatigue and its impact on safety and security in an aviation workplace is developed and applied to day-to-day work

1.2 Contributors to fatigue are recognised and actions are taken to minimise safety implications in an aviation workplace

1.3 Personal fatigue is identified and actions to minimise fatigue are taken in accordance with workplace procedures

2 Employ fatigue risk management practices to minimise fatigue

2.1 Individual work schedules and rosters are managed to minimise fatigue risks

2.2 Personal fatigue risk management practices are employed to maintain vigilance and alertness in accordance with workplace procedures

2.3 Factors external to the workplace that cause fatigue are recognised

2.4 Strategies that promote effective long-term management of fatigue are implemented

2.5 Personal fatigue limits are identified and communicated to supervisors in accordance with workplace procedures

2.6 Restrictions on work duty limits are confirmed

2.7 Potential risks of exceeding work duty limits are identified and rectified in accordance with workplace procedures and legislative requirements

3 Identify fatigue in others

3.1 Work colleagues are monitored for signs of personal fatigue

3.2 Communication techniques and strategies are used to assist work colleagues in identifying and managing fatigue

3.3 Contributions are made to the team to assist in

minimising fatigue in others

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIF3005 Maintain the safety of people and aircraft.

Assessment Requirements for AVIF0040 Employ fatigue risk management practices in an aviation workplace

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- applying fatigue risk management practices to maintain vigilance and alertness in an aviation workplace
- applying legislative restrictions on work duties to assist in managing fatigue risks
- applying precautions and required actions to minimise and control the effects or eliminate identified fatigue risk hazards
- communicating effectively with others
- determining and correctly managing factors external to an aviation workplace that could have implications on personal fatigue
- identifying and accurately predicting the effect of rosters and scheduled meal breaks on personal fatigue levels
- identifying and determining the effect contributing factors outside the aviation workplace will have on fatigue
- identifying causes of fatigue and implementing strategies to minimise fatigue in an aviation workplace
- implementing strategies to minimise fatigue contributing factors
- implementing work health and safety (WHS) procedures and relevant regulations
- modifying activities and taking appropriate initiatives to manage fatigue in the workplace depending on work contexts, risk situations and environments
- reading, interpreting and following relevant instructions, procedures, regulations, information and signs
- recognising actions or workplace situations that promote fatigue
- using fatigue identification and management techniques to assist work colleagues in identifying and managing fatigue
- using personal checklists to determine the extent and management of fatigue
- utilising fatigue management practices to detect and assist in managing fatigue in work colleagues.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- communication techniques and strategies to assist work colleagues to identify and manage fatigue
- effects of fatigue on workplace performance
- fatigue risk management strategies
- individual responsibilities for fatigue management
- lifestyle choices external to an aviation workplace that affect fatigue
- personal signs of fatigue and possible solutions to minimise fatigue
- relevant codes, regulations and workplace procedures related to fatigue risk management
- relevant WHS regulations as they relate to fatigue
- security and safety implications of fatigue in an aviation workplace
- signs of fatigue in others in an aviation workplace
- sources of information on fatigue and fatigue risk management.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIF0041 Maintain the safety of people and aircraft

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to maintain the safety of people and aircraft in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes carrying out required safety procedures, managing safety risks and hazards, following flight crew directions, aiding and assisting passengers during an emergency, and carrying out administrative procedures.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to safety management duties of flight operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Carry out safety procedures

1.1 Pre-take-off safety and security checks are conducted in accordance with regulatory requirements and workplace procedures

1.2 Safety demonstrations and checks are conducted in accordance with regulatory requirements and workplace procedures

1.3 Safety hazards are identified and reported and/or acted on in accordance with risk management procedures and regulatory requirements

1.4 Appropriate hazard mitigation strategies are determined and implemented in conjunction with other aircrew members in accordance with risk management procedures and regulatory requirements

2 Follow flight crew directions

2.1 Instructions of senior flight crew are followed at all times

2.2 Individual crew positions are taken during landing and take-off and as directed by flight crew

2.3 Safety restraints and crew seating are used during landing, take-off and as directed by flight crew instructions, workplace procedures and safety regulations

3 Aid and assist passengers during an inflight emergency

3.1 Passengers are advised of hazardous conditions, potential emergencies, at appropriate times, and related safety and emergency actions to take during flight

3.2 In an emergency, passengers are advised of the nature of the emergency and the procedures and precautions to be followed

3.3 Clear communication is established and maintained with passengers

3.4 Passengers are aided during the emergency in accordance with regulatory requirements, flight crew instructions and workplace procedures

- 3.5 Passengers are assisted, as required, during emergency situations
 - 3.6 First aid and/or medical attention is applied, as required, in conjunction with other crew members during an emergency situation
- 4 **Carry out administrative procedures**
 - 4.1 Workplace administrative procedures related to flight safety are identified and interpreted
 - 4.2 Administrative procedures related to safety and emergency procedures and incidents are implemented in accordance with workplace and regulatory requirements
 - 4.3 All required aircraft safety documentation is completed and processed in accordance with workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIF3005 Maintain the safety of people and aircraft.

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIF0041 Maintain the safety of people and aircraft

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- demonstrating safety features for passengers, including:
 - emergency lighting equipment
 - lifejackets, life rafts and seat cushions
 - oxygen equipment, including masks
 - restraint equipment
 - safety instruction sheets
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing inflight emergency response procedures for:
 - aborted take-off
 - aircraft collision
 - aircraft ditching
 - cabin depressurisation
 - disruptive passenger behaviour
 - emergency landing
 - explosion or fire on aircraft
 - illness or injury of passenger/s or crew
 - loss of aircraft power
 - malfunctioning aircraft equipment
 - severe air turbulence
 - smoke/fire in cabin
 - unlawful interference with aviation

- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, regulations, procedures, information and signs
- reporting and/or rectifying problems, faults and malfunctions promptly in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- aviation operations and regulatory standards and procedures for maintaining safety requirements during aircraft cabin operations
- basic knowledge of aviation medicine, the atmosphere and hypoxia
- cabin features, safety equipment and amenities for various types of aircraft, including:
 - aircraft intercom and communications equipment
 - defibrillator
 - escape devices
 - emergency lighting equipment
 - first aid kit and equipment
 - fire-fighting equipment
 - life jackets, life rafts and seat cushions
 - oxygen equipment, including masks - fixed and portable
 - personal breathing equipment
 - restraint equipment
 - safety demonstration videos
 - safety instruction sheets
 - survival equipment
- hazard identification and risk control procedures and related regulatory requirements
- human factors and non-technical skills, including:
 - decision-making processes

- principles of effective communication
- situational awareness
- threat and error management (TEM) relevant to own role
- inflight emergency response procedures for:
 - aborted take-off
 - aircraft collision
 - aircraft ditching
 - cabin depressurisation
 - disruptive/unruly passenger behaviour
 - emergency landing
 - explosion or fire on aircraft
 - illness or injury among passengers or crew
 - loss of aircraft power
 - malfunctioning aircraft equipment
 - severe air turbulence
 - smoke/fire in cabin
 - unlawful interference with aviation
- safety demonstration aspect to passengers including:
 - aircraft intercom and communications equipment
 - defibrillator
 - first aid kit and equipment
 - fire-fighting equipment
 - personal breathing equipment
 - safety demonstration videos
 - survival equipment
 - escape devices
 - fixed and portable oxygen
- principles of passenger and aircraft safety
- problems that may occur when maintaining safety requirements during aircraft cabin operations and appropriate action that should be taken in each case
- procedures to be followed during safety demonstrations and emergencies
- relevant aviation operational administrative procedures
- relevant customs, quarantine, equal opportunity and anti-discrimination regulations
- relevant WHS, hygiene and environmental procedures and regulations
- relevant sections of regulations pertaining to the integrated safety responsibilities and roles of aircrew
- risks that exist during aircraft flight and related risk control procedures and precautions.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training

Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

AVIF0042 Respond to abnormal and emergency situations in an aircraft

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to respond to abnormal and emergency situations in an aircraft in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes responding to a medical emergency during a flight, responding to adverse weather and/or flying conditions, and responding to an abnormal or emergency aircraft situation. It also includes assisting in evacuating an aircraft, responding to fire on board an aircraft, and completing required documentation for an abnormal or emergency incident.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to safety management duties of flight operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Respond to a medical emergency during a flight

- 1.1** Illness or injury among passengers or crew is identified in accordance with workplace procedures
- 1.2** Identified illness or injury is reported to pilot in command (PIC) and/or a senior crew member, and appropriate action is taken in accordance with workplace procedures
- 1.3** Directions of senior crew members are followed in accordance with workplace procedures
- 1.4** Appropriate first aid response is assessed and applied when medical circumstances demand
- 1.5** Medical assistance is sought from among other crew members and passengers, if necessary, in accordance with workplace procedures
- 1.6** Medilink and other means of remote medical advice and assistance are accessed, as required, in accordance with workplace procedures

2 Respond to adverse weather and/or flying conditions

- 2.1** Directions of PIC and/or senior crew members are followed in adverse weather and/or flying conditions or turbulence
- 2.2** Hazards are identified, risks are assessed and control measures implemented
- 2.3** Passengers are advised to adopt safe seating positions and to take required precautions in accordance with workplace procedures and regulatory requirements
- 2.4** Passengers are assisted and reassured during adverse conditions, as required
- 2.5** Appropriate personal response actions are taken in response to perceived hazardous situations in accordance with crew resource management (CRM) principles

- 2.6** Communication is maintained with passengers and other aircrew members during abnormal conditions
- 2.7** Personal initiative and experience are utilised in securing self and equipment in turbulence
- 3 Respond to abnormal or emergency aircraft situations**
- 3.1** Directions of senior crew members are followed in an abnormal or emergency situation
- 3.2** Appropriate personal response actions are taken in response to abnormal or emergency situations
- 3.3** Emergency procedures are implemented in accordance with regulatory requirements, consistent with the nature of the emergency
- 3.4** Passengers are assisted and reassured during an emergency as required
- 3.5** Communication is maintained with passengers and other flight members during an emergency
- 4 Assist in evacuating an aircraft**
- 4.1** Directions of senior crew members are followed in aircraft evacuation
- 4.2** Evacuation procedures are implemented in accordance with workplace and regulatory requirements
- 4.3** Passengers are appropriately assisted and reassured during evacuation process as required
- 4.4** Communication is maintained with passengers and other aircrew members during evacuation
- 5 Respond to fire on board an aircraft**
- 5.1** Appropriate fire protection procedures are implemented in accordance with workplace and regulatory requirements
- 5.2** Relevant regulatory and workplace fire emergency procedures are followed in a fire
- 5.3** Directions of senior crew members are followed in an aircraft fire
- 5.4** Appropriate passenger support and assistance is provided during a fire emergency
- 5.5** Communication is maintained with passengers and other

aircrew members during a fire emergency

6 Complete required documentation for an abnormal or emergency incident

- 6.1** Abnormal or emergency cabin service incidents are identified and interpreted in accordance with workplace reporting procedures
- 6.2** All required aircraft documentation relevant to an abnormal or emergency cabin service incident is completed and processed in accordance with workplace requirements including requirements for work health and safety (WHS)/occupational health and safety (OHS) and/or safety incident reports

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIF3006 Respond to abnormal and emergency situations in an aircraft.

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIF0042 Respond to abnormal and emergency situations in an aircraft

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing aircraft fire response procedures, including:
 - fire prevention and protection procedures
 - basic fire drill
 - cabin crew fire response procedures during flight
 - cabin crew fire response procedures when aircraft is on the ground
- implementing appropriate procedures in abnormal and emergency situations, including:
 - aircraft ditching
 - aircraft engine or equipment malfunction or failure
 - aircraft instrument malfunction or failure
 - aircraft low fuel quantity emergency
 - cabin depressurisation
 - disruptive passenger behaviour
 - emergency landing
 - explosion or fire in cabin
 - hazardous problems with aircraft air conditioning systems
 - injury to passenger or crew
 - passenger or crew illness
 - security threat on board aircraft
 - severe air turbulence
 - unlawful interference with aviation

- implementing evacuation procedures, including:
 - day or night evacuations
 - ditching in water, including both prepared and unprepared
 - emergency exit from aircraft by any available means
 - emergency landing, including both prepared and unprepared
 - precautionary evacuation
 - raft management
 - search and rescue
 - slide descents
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, regulations, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- abnormal and emergency response actions related to individual role for:
 - aircraft ditching
 - aircraft engine or equipment malfunction or failure
 - aircraft instrument malfunction or failure
 - aircraft low fuel quantity emergency
 - cabin depressurisation
 - disruptive passenger behaviour
 - emergency landing
 - explosion or fire in cabin
 - hazardous problems with aircraft air conditioning systems

- injury to passenger or crew
- passenger or crew illness
- security threat on board aircraft
- severe air turbulence
- unlawful interference with aviation
- aviation administrative procedures
- aviation operational procedures for responding to an abnormal or emergency situation on an aircraft, including fire response and aircraft evacuation
- cabin emergency features and equipment for various types of aircraft
- crew resource management (CRM) principles
- problems that may occur during abnormal and emergency situations on an aircraft and appropriate action that should be taken in each case
- relevant WHS/OHS, environmental protection procedures and regulations
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders related to aircraft emergency procedures
- risks that exist during abnormal and emergency situations on an aircraft and related risk control procedures and precautions
- safety demonstration procedures
- workplace procedures, including:
 - aircraft refuelling with passengers on board
 - cabin preparation
 - door procedures
 - emergency procedures
 - equipment stowage
 - excess carry-on baggage
 - onboard safety
 - precautions during abnormal weather/flying conditions
 - pre-flight passenger briefing
 - security procedures
 - smoking regulations briefing
 - take-off and landing.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace

conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIF0043 Apply relevant laws and regulations to the operation of an aerodrome

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to apply relevant laws and regulations to the operation of an aerodrome in compliance with relevant regulatory requirements and national operating standards.

It includes applying relevant regulations and legal obligations and applying relevant local laws and regulations.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to safety management duties of ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Apply relevant regulations and legal obligations

1.1 Sources of information on regulatory requirements and legal obligations relevant to aerodrome operations are identified and accessed in accordance with workplace procedures

1.2 An understanding of regulatory requirements and legal obligations relevant to aerodrome operations is developed and applied to routine work at an aerodrome

1.3 Compliance with regulatory requirements is maintained in accordance with the operation of an aerodrome

1.4 Breaches of laws and regulations to the operation of an aerodrome are reported to relevant people

2 Apply relevant local laws and regulations

2.1 Regulations and local instructions relevant to work activities of personnel are correctly identified and appropriate action is taken during routine work to ensure compliance as required

2.2 Relevant documentation and reports are prepared and processed in accordance with workplace procedures and relevant regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIF3012 Apply relevant laws and regulations to the operation of an aerodrome.

Assessment Requirements for AVIF0043 Apply relevant laws and regulations to the operation of an aerodrome

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying aviation safety management system (SMS) and procedures to assess and/or mitigate risk that might arise in operating an aerodrome
- communicating effectively with others when completing documentation related to operating an aerodrome
- identifying and correctly using relevant equipment
- implementing work health and safety (WHS) procedures and relevant regulations
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, Manual of Standards (MOS) regulations, procedures, information and signs
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- aerodrome layout, including access routes
- aerodromes, including:
 - certified aerodromes

- registered aerodromes
- other (unclassified) aerodromes
- application of relevant local laws, MOS and legal obligations
- basic features and characteristics of aerodrome lighting systems
- physical characteristics of aircraft
- people to be notified about breaches, including:
 - air traffic controllers (ATCs)
 - airline personnel and managers
 - Civil Aviation Safety Authority (CASA) personnel
 - contractors
 - emergency services personnel
 - freight handlers
 - relevant human resources staff
 - relevant technical staff
 - other government departments/authorities
 - safety personnel
 - security personnel
 - union representatives
 - other aerodrome personnel and managers
- problems, safety hazards and risks that may exist in the operation of an aerodrome and related risk assessment/management measures that may need be taken
- requirements for completing relevant documentation and/or incident reporting
- reporting procedures
- weather information and its implications for workplace operations
- workplace procedures for applying relevant laws and regulations to the operation of an aerodrome.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations

- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIF0044 Marshal aircraft

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to marshal aircraft in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes preparing for marshalling, establishing/disestablishing aircraft parking position and conducting aircraft marshalling.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to safety management duties of ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

- | | |
|---|---|
| 1 Prepare for marshalling | 1.1 Arrival/departure information is received and processed in accordance with workplace procedures |
| | 1.2 Marshalling requirements for different aircraft types are determined and requirements are clarified as required |
| | 1.3 Hazards are identified, risks are assessed and hazard management implemented |
| | 1.4 Personal protective equipment (PPE) is selected and fitted |
| | 1.5 Work health and safety (WHS)/occupational health and safety (OHS) requirements and recognised safety precautions are applied throughout the operation |
| | 1.6 Allocated aircraft parking position is confirmed |
| | 1.7 Marshalling, aircraft parking and ancillary support equipment are selected and checked for serviceability |
| | 1.8 Relevant documentation is completed and processed in accordance with workplace procedures |
| 2 Establish/disestablish aircraft parking position | 2.1 Marshalling, aircraft parking, and ancillary support equipment are positioned and used in accordance with manufacturer instructions and workplace procedures |
| | 2.2 Movement is conducted in a safe manner in accordance with workplace procedures |
| | 2.3 Environmental factors are monitored to ensure safety is maintained |
| 3 Conduct aircraft marshalling | 3.1 Special circumstances/procedures during aircraft marshalling are allowed for |
| | 3.2 Standard marshalling signals and/or communications are employed |
| | 3.3 Visual contact with pilot, other aircrew and/or ground staff is maintained |
| | 3.4 Safety distances between aircraft and ground personnel/obstructions are identified and maintained |
| | 3.5 Emergency actions are conducted in an aircraft fire or other incident in accordance with workplace procedures |

- 3.6 Aircraft is secured/unsecured in accordance with workplace procedures
- 3.7 Wind speed and direction are continually assessed for impact on marshalling operations
- 3.8 Effects of aircraft ground turbulence on personnel and unsecured objects are taken into consideration

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIF3016 Marshal aircraft.

Assessment Requirements for AVIF0044 Marshal aircraft

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- communicating effectively with others
- completing relevant documentation
- conducting emergency actions in an aircraft fire or other incident in accordance with workplace procedures, including:
 - aircraft evacuation procedures
 - basic firefighting
 - basic first aid
 - crowd control
 - notifying emergency services
 - spill and hazard control
- conducting movement in a safe manner in accordance with workplace procedures
- employing standard marshalling signals and/or communications, including:
 - International Civil Aviation Organization (ICAO) signals
 - standard hand signals
- identifying and correctly using relevant equipment
- implementing aircraft security and access procedures
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- maintaining visual contact and safety distances
- modify activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring environmental factors to ensure safety is maintained
- monitoring work activities in terms of planned schedule
- reading, interpreting and following relevant instructions, regulations, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with

workplace procedures

- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- using standard hand signals
- working collaboratively with others
- working systematically with required attention to detail without injury to self, others or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- aircraft danger zones
- aircraft operating restrictions in confined areas
- day and night marshalling signals
- effects of wind speed and direction on aircraft
- landing/taking-off and starting of aircraft
- manufacturer instructions for equipment used for marshalling aircraft
- marshalling, including:
 - aircraft parking
 - allocating and prioritising
 - cargo loading and unloading
 - hover
 - hover taxiing
 - refuelling operations
 - rotor engagement
 - start-up
 - shutdown
 - taxiing
- marshalling for different aircraft, including:
 - aerodrome access
 - aircraft parking/landing area capacity
 - physical security
- marshalling, ground support and aircraft equipment selection and serviceability
- problems that may occur when marshalling aircraft and appropriate action that should be taken in each case
- special circumstances, including:
 - aircraft with no prop or rotor brake
 - installation of locking, protection or security devices
 - negative rotation

- power sources
- safety requirements, e.g. fire bottle attendants
- safety pin requirements for aircraft carrying ordnance
- undercarriage lock pins
- procedures for an aircraft fire, accident or emergency
- ancillary support equipment, including:
 - access/egress equipment
 - external aircraft power facilities
 - first aid kit
 - fire extinguisher
 - parking markers and barriers
- regulations, legislation, organisational policy and procedures in relation to marshalling aircraft
- risks that exist when marshalling aircraft and related risk control procedures and precautions
- security and access requirements.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIF0045 Facilitate the safety of aerodrome works and works site access

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to facilitate the safety of aerodrome works and works site access in compliance with relevant regulatory requirements and national operating standards.

It includes preparing for aerodrome works, facilitating aerodrome access by vehicles and personnel, facilitating aerodrome works and completing aerodrome works.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to safety management duties of ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare for aerodrome works

- 1.1 Official notification of impending start to aerodrome works is confirmed with appropriate aerodrome personnel
- 1.2 Processes for safe conduct of aerodrome works are developed or adapted from relevant plans, drawings, procedures documents and method of working plans (MOWPs) in accordance with workplace procedures
- 1.3 Factors that may adversely affect the safety and/or security of an aviation workplace are determined
- 1.4 Workplace hazards are identified, risks are assessed and risk controls developed and implemented

2 Facilitate aerodrome access by vehicles and personnel

- 2.1 Access requirements and relevant authorisation for vehicles and personnel are determined in accordance with workplace procedures
- 2.2 Personnel, vehicles and equipment entering airside are inspected to ensure compliance with aerodrome requirements
- 2.3 Appropriate facilitation of works personnel and vehicles is maintained throughout period on airside
- 2.4 Vehicles are inspected to ensure they are marked in an appropriate manner

3 Facilitate aerodrome works

- 3.1 Unserviceability markers and barriers are positioned in accordance with workplace procedures and regulations
- 3.2 Aerodrome works are facilitated in accordance with MOWPs or other workplace procedures
- 3.3 Activities of personnel, vehicles and plant on movement area are managed to ensure aircraft safety
- 3.4 Works are completed in accordance with relevant MOWP or Notice to Airmen (NOTAM)
- 3.5 Updated notification information is issued to ensure continued safe conduct of aerodrome works and aircraft

- operations
- 3.6** Aerodrome is temporarily restored to operational status in accordance with workplace procedures and regulatory requirements as required by aircraft
- 4 Complete aerodrome works**
- 4.1** Works area is cleared of personnel, vehicles and plant in a safe and timely manner, ensuring aerodrome has been restored to full operational status
- 4.2** Works-affected area is inspected for serviceability in accordance with workplace procedures
- 4.3** Aerodrome overall is inspected for serviceability in accordance with workplace procedures
- 4.4** Relevant authorities or organisations are notified of aerodrome serviceability restoration in accordance with workplace procedures using suitable means of communication
- 4.5** Relevant reports are completed, filed and disseminated in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIF3025 Facilitate the safety of aerodrome works and works site access.

Links

Assessment Requirements for AVIF0045 Facilitate the safety of aerodrome works and works site access

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying relevant legislation and workplace procedures
- applying relevant systems, such as aerodrome safety management system (SMS) and procedures to assess and/or mitigate risk that might arise when inspecting and reporting on aerodrome serviceability
- communicating effectively with others when providing workplace briefings or pre-start meetings to discuss aviation hazards, aircraft schedules, weather and contingencies amongst workers during prior to works
- completing relevant documentation
- identifying and correctly using equipment required to facilitate the safety of aerodrome works and works site access, including:
 - computer
 - hand tools
 - lights
 - maintenance equipment
 - markers
 - radio/s (non-ops/HF radio, airband/very high frequency (VHF) radio)
 - spills response kit
 - telephone
 - vehicle with flashing light
 - vehicle siren/loud speaker
- identifying unserviceability markers and cones, including:
 - displaced threshold markers
 - signal circle markers
 - unserviceability cones
 - unserviceability cross markers
 - unserviceability lighting

- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- inspecting vehicles, including:
 - appropriate markings and lights
 - cleanliness to prevent the spread of weeds
 - company logo/identification
 - fuel and oil leakage
 - radio equipment as required
 - roadworthiness
 - secure loads
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, regulations, procedures, information and signs
- responding appropriately to cultural differences in the workplace
- working tasks within aerodrome, including:
 - maintenance of markings and lights
 - major construction or repairs to movement area
 - minor repairs to pavements
 - mowing grass
 - painting and repainting
 - rolling surfaces
 - surveys and inspections
 - sweeping pavements
- updating and issuing notification information
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others when facilitating the safety of aerodrome works and works site access
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- aerodrome layout, including access routes
- aerodrome categories, including:
 - certified

- registered
- other
- aerodrome works classifications, including:
 - time limited works not affecting normal aircraft operations (movement area operational in less than 10 minutes)
 - time limited works requiring a Notice to Airmen (NOTAM), where normal aircraft operations are not affected (movement area not operational within 10-30 minutes)
 - works requiring method of working plan (MOWP) with proposed NOTAM for each stage of works
 - unscheduled/emergency works
 - unrestricted works (aerodrome closed)
- aircraft schedules and their use in facilitating the safety of aerodrome works and works site access
- different operating conditions, including:
 - all weather conditions
 - day or night
 - variety of terrain conditions
 - various forms of transport, such as vehicles and other motorised/towed equipment
- functions of a works safety officer
- inspection of personnel, including:
 - confirmation of authorisation to enter airside
 - confirmation of appropriate licence to operate vehicles and equipment
- aerodrome markings and signage
- aerodrome speed limits
- aerodrome terminology, signs and radio instructions
- directions from works safety officer
- required vehicle marking and lighting requirements
- vehicle restriction zones around aircraft, navigation beacons and lights
- operation of airband radio equipment
- physical characteristics of aircraft
- problems, safety hazards and risks that may occur when facilitating the safety of aerodrome works and works site access and related assessment/management measures that may need to be taken
- processes for the safe conduct of works, including:
 - identifying safe work vehicle movement areas
 - instructing work personnel
 - work procedures
- procedures for making movement area safe for aerodrome works, including:
 - accessing current weather information and public/aviation forecasts applicable to works site as required
 - closing aerodrome to all air traffic

- closing the movement area (aerodrome closure)
- contacting aerodrome users
- ensuring lighting required to carry out works does not represent a hazard to aircraft operations
- extinguishing lighting to hazardous section of movement area
- marking unserviceable area/s
- partial closure of movement area
- purpose and application of aerodrome markers, markings and temporary lighting
- purpose and application of MOWP
- reporting procedures
- relevant authorities for reporting purposes, including:
 - aerodrome operator or delegated person
 - aerodrome users
 - air traffic control (ATC)
 - Australian Defence Forces for military bases
 - Civil Aviation Safety Authority (CASA)
 - NOTAM Office (Airservices Australia)
- relevant information/documents, including:
 - aerodrome emergency plan (AEP) and procedures to be followed for each aerodrome emergency
 - aerodrome drug and alcohol management plan (DAMP)
 - aerodrome manual
 - aerodrome SMS and safety/security policies, and principles of risk assessment and risk management
 - aerodrome transport security plan (TSP)
 - airline timetables
 - airside driver handbook and/or airside driving requirements for the aerodrome
 - Australian Standards
 - Civil Aviation Safety Regulations (CASRs)
 - conditions of service, legislation and industrial agreements, including workplace agreements and awards
 - induction and training materials
 - logbooks
 - Manual of Standards (MOS) Part 139 – Aerodromes
 - NOTAM
 - operational checklists
 - plans and maps
 - relevant forms and databases
 - safety data sheets (SDSs)/materials safety data sheets (MSDSs) for hazardous materials
 - workplace procedures
- relevant legislative and regulatory requirements relating to facilitating the safety of

aerodrome works identified in:

- CASRs and MOS Part 139 – Aerodrome
- Defence Orders and Instructions
- environmental sustainability
- standards and recommended practices (SARPs) of the International Civil Aviation Organization (ICAO)
- workplace relations
- WHS/OHS and environmental, procedures and regulations, including DAMP
- reporting procedures
- requirements for completing relevant documentation and/or incident reporting
- safety distances required from an aircraft wingtip to objects, including other aircraft
- signs and notices, including:
 - hazard warnings
 - limited access
 - movement area guidance signs
 - no smoking
 - speed restrictions
 - unauthorised entry
 - underground electrical reticulation
- suitable means of reporting the conduct of works, including:
 - MOWP
 - NOTAM
 - other written means of communications as appropriate
 - verbal communication
- weather information and its implications for workplace operations
- when serviceability inspections may need to occur
- workplace procedures for facilitating the safety of aerodrome works and works site access.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIF0046 Facilitate an aerodrome emergency response

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to facilitate an aerodrome emergency response in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes preparing for an aerodrome emergency, responding to an aerodrome emergency, and taking appropriate actions to reinstate aerodrome operations.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to safety management duties of ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

- | | |
|--|---|
| 1 Prepare for an aerodrome emergency | <p>1.1 Familiarity with aerodrome emergency response procedures and role of responding agencies is established</p> <p>1.2 Aerodrome emergency equipment is checked and tested in accordance with workplace procedures</p> <p>1.3 Emergency exercises and debriefing sessions are participated in as required</p> <p>1.4 Hazards are identified, risks are assessed and hazard management implemented</p> <p>1.5 Responding agencies are escorted on familiarisation tours of airside facilities as required</p> |
| 2 Respond to an aerodrome emergency | <p>2.1 Established emergency response procedures are followed</p> <p>2.2 Forward command post (FCP) and other forward control areas are appropriately established</p> <p>2.3 Wreckage is guarded and evidence preserved</p> <p>2.4 Command of initial emergency response is appropriately handed over to responding agencies</p> <p>2.5 Responding agencies are assisted as required</p> <p>2.6 Running log is maintained throughout an emergency</p> <p>2.7 Media enquiries are appropriately handled</p> |
| 3 Take appropriate action to reinstate aerodrome operations | <p>3.1 Assessment of continued aerodrome operational capability is correctly made and authorities notified</p> <p>3.2 Airside facilities are returned to service as required</p> <p>3.3 Reports are completed, filed and disseminated to relevant authorities as required in accordance with workplace procedures</p> |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIF3026 Facilitate an aerodrome emergency response.

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIF0046 Facilitate an aerodrome emergency response

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with workplace procedures
- applying relevant legislation and workplace procedures
- applying relevant systems, such as aerodrome safety management system (SMS) and procedures, to assess and/or mitigate risk that might arise while facilitating a response to an aerodrome emergency
- activating the aerodrome emergency plan (AEP), including:
 - implementing aerodrome emergency procedures
 - reporting to Australian Transport Safety Bureau (ATSB)
 - reporting to local police service
- responding to aerodrome emergency, including
 - aircraft crash off aerodrome
 - aircraft crash on aerodrome
 - explosive threat
 - full emergency
 - hazardous materials incident
 - local standby
 - major building fire
 - medical emergency
 - unlawful interference with aviation
 - wildlife hazards
- reporting situations, including:
 - changes to temporary or permanent published aerodrome information
 - emergency situations resulting in some or all of the aerodrome becoming unserviceable
 - restoration of aerodrome serviceability
- communicating effectively with others
- reporting to relevant authorities, including:

- aerodrome operator or delegated person
- aerodrome users
- air traffic control (ATC)
- Australian Defence Force (Defence) Command for military bases
- Civil Aviation Safety Authority (CASA)
- Notice to Airmen (NOTAM) Office (Airservices Australia)
- reporting using suitable means, including:
 - NOTAM
 - verbal communications
 - written communication by fax or email
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following workplace procedures and prioritising work
- monitoring and anticipating operational problems and hazards and taking appropriate action
- operating electronic communications equipment to required protocols
- reading, interpreting and following relevant instructions, regulations, procedures, information and signs
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- aerodrome environments, including:
 - areas surrounding navigational aids
 - aerodrome works sites
 - buildings
 - drainage systems
 - fences and gates
 - obstacle limitation surfaces (OLS)
- aerodrome layout, including:
 - access routes
 - aerodrome movement area facilities:
 - apron
 - clearway

- markers, markings and aerodrome lighting
- runway and runway strip
- runway end safety area
- taxiway and taxiway strip
- appropriate responses to emergency transmission, including:
 - establishing priority of calls
 - imposing radio silence
- critical messages, including a distress message (MAYDAY call) and an urgency message (PAN call)
- emergency response procedures
- operation of airband radio equipment as used to communicate with ATC and/or pilots
- physical characteristics of aircraft, including:
 - commercial charter aircraft
 - commercial passenger aircraft
 - emergency medical service (EMS) aircraft
 - fixed wing and/or helicopters
 - freighter aircraft
 - general aviation/recreational aircraft
 - military aircraft
- problems, safety hazards and risks that exist when facilitating an aerodrome emergency response and related risk assessment/management measures that may need to be taken into account
- hazards, including:
 - aircraft movements
 - explosions
 - fire and smoke
 - foreign object debris (FOD)
 - fumes
 - hazardous/toxic materials
 - other vehicles in the vicinity of the emergency
 - personnel in the vicinity of the emergency
 - slippery surfaces
- purpose and application of aerodrome markers, markings and temporary lighting
- purpose and role of forward command post (FCP)
- aerodrome emergency equipment, including:
 - communications
 - emergency lighting
 - first aid equipment
 - incident management kits
 - spill response and control kits

- tools and equipment
- vehicles and trailers
- radio equipment, including:
 - airband/very high frequency (VHF) radio
 - non-operations/ultra-high frequency (UHF) radio
- relevant information/documents, including:
 - AEP and procedures to be followed for each aerodrome emergency
 - aerodrome manual
 - aerodrome SMS and safety/security policies and principles of risk assessment and risk management
 - aerodrome transport security plan (TSP)
 - airline timetables
 - airside driver handbook and/or airside driving requirements for the aerodrome
 - Civil Aviation Safety Regulations (CASRs)
 - conditions of service, legislation and industrial agreements, including workplace agreements and awards
 - induction and training materials
 - logbooks
 - Manual of Standards (MOS) Part 139 – Aerodromes
 - NOTAM
 - operational checklists
 - plans and maps
 - relevant forms and databases
 - safety data sheets (SDSs)/material safety data sheets (MSDSs) for hazardous materials
 - workplace procedures for facilitating an aerodrome emergency response
- relevant legislative and regulatory requirements relating to facilitating an aerodrome emergency response, including:
 - Defence Orders and Instructions
 - standards and recommended practices (SARPs) of the International Civil Aviation Organization (ICAO)
 - workplace relations
 - WHS and environmental, procedures and regulations, including drug and alcohol management plan (DAMP)
- reporting procedures
- requirements for completing relevant documentation and/or incident reporting
- weather information and its implications for workplace operations.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Aerodromes must include one or more of the following:

- certified aerodromes
- registered aerodromes
- other (unclassified) aerodromes.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIF2007 Implement regulations and policies during check-in procedures

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to implement regulations and policies during check-in procedures, in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes complying with national and international legal obligations, complying with local laws and regulations, and complying with established industrial relations practices and requirements.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to safety management duties of ground operations personnel, and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Use for Defence Aviation is to be in accordance with relevant Defence Orders, Instructions, Publications and Regulations.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Comply with national and international legal obligations

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Sources of information on the legal obligations of an aircraft operator and staff during check-in are identified and accessed in accordance with workplace procedures
- 1.2 An understanding of the legal obligations of an aircraft operator and staff during check-in is developed and applied to day-to-day work in the aviation industry
- 1.3 Compliance is maintained with the legal obligations that bind an aircraft operator and staff during check-in

2 Comply with local laws and regulations

- 2.1 Relevant national/state/territory work health and safety (WHS)/occupational health and safety (OHS) laws and regulations are correctly identified and applied in day-to-day work to ensure compliance, in accordance with workplace procedures
- 2.2 Relevant customs and quarantine regulations are correctly identified and appropriate action is taken in day-to-day work to ensure compliance as required
- 2.3 Appropriate advice is provided to passengers on customs and quarantine regulations as required
- 2.4 Compliance is maintained with local laws and regulations while providing check-in services in all ports serviced by airline operator

3 Comply with established industrial relations practices and requirements

- 3.1 Sources of information on established industrial relations practices and requirements relevant to the aviation industry are identified and accessed in accordance with workplace procedures
- 3.2 An understanding of the established industrial relations practices and requirements relevant to the aviation industry is developed and applied to day-to-day work during passenger service operations

- 3.3 An understanding of the employer/employee obligations and responsibilities is developed and applied to day-to-day work during passenger service operations

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Check-in service must be provided for one or more of the following:

- any type of commercial aircraft flight including domestic or international, while in home port or in slip port
- short and/or long haul services
- any category of service including economy, business class and first class

An understanding of the employer/employee obligations and responsibilities must include one or more of the following:

- concepts of arbitration and conciliation
- industrial awards system
- specific relevant enterprise awards/agreements
- trade union system

Information must include one or more of the following:

- airline procedures and instructions, and job specifications
- check-in service checklists and procedures
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- induction and training materials
- local laws and regulations when providing check-in services in remote countries
- WHS/OHS security and environmental protection regulations
- relevant regulations, including security, customs, quarantine, WHS/OHS security and environmental protection regulations
- workplace policies

Unit Mapping Information

This unit replaces and is equivalent to AVIF2007B Implement regulations and policies during check-in procedures.

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for AVIF2007 Implement regulations and policies during check-in procedures

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS)/occupational health and safety (OHS) procedures and relevant regulations
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment conforming to industry and WHS/OHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- concepts of arbitration and conciliation
- people to be consulted about implementing regulations and policies during check-in procedures:
 - aircraft cabin crew and flight crew members
 - airline supervisory and management staff
 - aviation industry regulatory staff
 - customs authority staff
 - ground support staff
 - passengers
 - quarantine authority staff
 - relevant government officials from Australia or other countries
 - relevant human resources staff
 - relevant technical staff
 - union representatives
- principles of enterprise bargaining where applicable
- requirements of relevant legislation and regulations for check-in services
- relevant regulations and policies related to:
 - established industrial relations practices and requirements
 - emergency and security procedures
 - employer/employee obligations and responsibilities
 - equal opportunity and anti-discrimination regulations
 - industrial relations institutions, organisations and their functions
 - local laws and regulations
 - national and international legal obligations
 - national and international regulations pertaining to passenger check-in services for commercial domestic and international aircraft flights
 - WHS/OHS, health, quarantine, customs and security procedures and regulations
- workplace and government policy on:
 - smoking on or in the vicinity of aircraft
 - using mobile phones or other electronic devices on or in the vicinity of aircraft
- workplace procedures and policies related to passenger check-in services for commercial, domestic and international aircraft flights.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

AVIF2019 Work in aircraft confined spaces

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to work in aircraft confined spaces, in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes planning and preparing for work in an aircraft confined space, entering and working in an aircraft confined space, exiting aircraft confined space, and completing confined space activities.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to safety management duties of ground operations personnel, and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Use for Defence Aviation is to be in accordance with relevant Defence Orders, Instructions, Publications and Regulations.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Plan and prepare for work in an aircraft confined space

- 1.1 Work instructions relevant to the task being performed are obtained, confirmed and applied to allocated task in accordance with established workplace procedures
- 1.2 Safety requirements are applied to allocated task in accordance with established workplace procedures
- 1.3 Authorisation to enter a confined space is obtained in accordance with established workplace procedures
- 1.4 Hazards are identified, risks are assessed and hazard management is implemented
- 1.5 Tools, equipment and personal protective equipment are selected to carry out task consistent with job requirements
- 1.6 Serviceability of tools, equipment and personal protective equipment is checked and faults are rectified or reported in accordance with established workplace procedures

2 Enter and work in an aircraft confined space

- 2.1 Access cover/cargo hold door is removed or opened as required
- 2.2 Confined space is entered in accordance with established workplace procedures
- 2.3 Communication is maintained with appropriate personnel in accordance with established workplace procedures
- 2.4 Designated work in confined space is conducted in accordance with established workplace procedures

3 Exit aircraft confined space

- 3.1 Confined space is exited in accordance with established workplace procedures
- 3.2 Tools, equipment, material and personal protective equipment are recovered from confined space

- | | |
|---|--|
| 4 Complete confined space activities | <p>3.3 Access cover/cargo hold door is replaced or closed as required</p> <p>4.1 Tools, equipment and personal protective equipment are checked and stored in accordance with established workplace procedures</p> <p>4.2 Unserviceable tools, equipment and personal protective equipment are fixed or reported in accordance with established workplace procedures</p> <p>4.3 Documentation is completed and processed in accordance with established workplace procedures</p> |
|---|--|

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

- | | |
|--|---|
| <p>Hazards that exist when working in an aircraft confined space include one or more of the following:</p> | <ul style="list-style-type: none"> • climatic conditions/extreme temperatures • contaminated atmosphere • dust • fire • hazardous materials • height of confined aircraft space • moving equipment within aircraft • noise • protruding surfaces in aircraft bulkhead and hold structures • toxic gases • uneven surfaces or gaps in aircraft floor • vibration |
| <p>Tools and equipment must include one or more of the following:</p> | <ul style="list-style-type: none"> • atmospheric testing equipment • communications equipment • harness and lifeline • self-contained breathing apparatus • signs and barriers |

- Personal protective equipment must include one or more of the following:
- tools and equipment relevant to work to be performed
 - hearing protection
 - high visibility clothing
 - protective clothing
 - safety footwear
 - safety glasses
 - safety gloves
 - sun protection
- Communication must include one or more of the following:
- hand signals
 - mobile phone
 - two-way radio
 - verbal instructions
 - written instructions

Unit Mapping Information

This unit replaces and is equivalent to AVIF2019A Work in aircraft confined spaces.

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for AVIF2019 Work in aircraft confined spaces

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying safe and effective operational use of tools, equipment and personal protective equipment
- applying safe preparation, entry and exit performance and application of all appropriate procedures
- communicating effectively with others
- completing relevant documentation
- complying with organisational policies and procedures
- identifying and correctly using aircraft confined space tools and equipment
- implementing contingency plans
- implementing work health and safety (WHS)/occupational health and safety (OHS) procedures and relevant regulations
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- planning and preparing for work in an aircraft confined space
- reading, interpreting and following relevant instructions, regulations, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly, in accordance with workplace procedures
- selecting and using required personal protective clothing and equipment conforming to industry and WHS/OHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self, others or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- aircraft confined space management and reporting procedures
- common hazards associated with working in aircraft confined spaces
- manufacturer instructions for aircraft confined space tools and personal protective equipment
- organisational defect reporting procedures
- problems that may occur when working in an aircraft confined space, and appropriate action that should be taken in each case
- regulations, legislation, organisational policy and procedures in relation to working in aircraft confined spaces
- relevant WHS/OHS and environmental procedures and regulations
- risks that exist when working in an aircraft confined space, and related risk control procedures and precautions
- safe manual handling techniques in confined spaces
- workplace procedures for working in an aircraft confined space.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

AVIF4008 Supervise cabin safety and security

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to supervise cabin safety and security, in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes identifying, supervising and actioning emergency procedures; and assessing and responding to emergency first aid situations. It also includes providing appropriate treatment, monitoring the situation, responding to incidents that affect the safety and security of passengers and crew, and maintaining safety and security records.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to safety management duties of flight operations personnel, and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Use for Defence Aviation is to be in accordance with relevant Defence Orders, Instructions, Publications and Regulations.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Identify, supervise and action emergency procedures	1.1 Emergency situation type is recognised and reported to appropriate personnel
	1.2 Emergency procedures are actioned in accordance with aviation enterprise and regulatory requirements
	1.3 Safety checks are implemented in accordance with aviation enterprise and regulatory requirements
2 Assess and respond to emergency first aid situations	2.1 Emergency first aid situations are quickly recognised and reported to appropriate personnel
	2.2 First aid situation is assessed and a prompt decision is made following liaison with appropriate personnel and/or crew
	2.3 Appropriate assistance from emergency services/colleagues/customers is organised
3 Provide appropriate treatment	3.1 Assessment of patient's physical condition from visible vital signs is undertaken in liaison with appropriate personnel and/or crew
	3.2 First aid is provided, in accordance with aviation enterprise policy
4 Monitor and respond to airborne incidents	4.1 Back-up medical or emergency services appropriate to the incident are notified in liaison with appropriate personnel and/or crew
	4.2 Situation is constantly monitored and appropriate adjustments to cabin service and security are made
	4.3 Appropriate incident handling techniques for incident type are used in accordance with regulatory requirements and aviation enterprise policy and procedure
	4.4 Emergency equipment appropriate to incident type is chosen

and used in accordance with manufacturer and workplace procedures

- 5 Maintain safety and security records**
- 5.1 All required documentation relating to safety, security and first aid incidents is accurately completed and provided to appropriate personnel
- 5.2 Feedback to improve safety and security processes is provided to appropriate personnel

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Incident type must include one or more of the following:
- aggressive or violent customers
 - incidents at domestic or international destinations
 - incidents classified as unlawful interference with aviation
 - industrial disputes affecting crew
 - intoxicated customers
- Emergency situation type must include one or more of the following:
- evacuation
 - fire
 - hijack
 - injury to or illness of crew or customer
- Emergency equipment must include:
- firefighting equipment
 - first aid equipment
 - general safety equipment
 - oxygen equipment

Unit Mapping Information

This unit replaces and is equivalent to AVIF4008A Supervise cabin safety and security.

Assessment Requirements for AVIF4008 Supervise cabin safety and security

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS)/occupational health and safety (OHS) procedures and relevant regulations
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, regulations, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly, in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment conforming to industry and WHS/OHS standards
- using medical equipment appropriately in accordance with manufacturer instructions and aviation enterprise policy
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- aviation enterprise emergency procedures
- aviation enterprise leadership principles
- aviation enterprise structure, products, policies, procedures and service standards
- appropriate service for customers with a range of disabilities and specific needs
- cabin features and amenities for various types of aircraft
- cabin first aid procedures
- complaint handling procedures
- customer service records and documentation
- features, amenities and departure gate locations of terminals at designated airports
- individual crew responsibilities related to cabin safety and security
- needs and expectations of different types of customers, including internal and external customers
- people to be consulted about cabin security and safety:
 - aircraft resourcing staff
 - catering staff
 - emergency services staff
 - ground staff
 - other cabin crew and flight crew members
 - security staff
 - technical staff
- problems that may occur when providing customer service to passengers on aircraft flights and appropriate action that should be taken in each case
- relevant aviation enterprise divisional business plans
- relevant customs, quarantine, equal opportunity and anti-discrimination regulations
- relevant WHS/OHS regulations
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders pertaining to emergency procedures
- risks that exist when providing customer service to passengers on aircraft flights and related risk control procedures and precautions
- service quality and continuous improvement principles
- unlawful interference with aviation incidents and response actions relevant to own role:
 - causing damage to an aircraft that is in service that puts the safety of the aircraft, or any person on board or outside the aircraft, at risk
 - committing an act at an airport, or causing any interference or damage, that puts the safe operation of the airport, or the safety of any person at the airport, at risk
 - destroying an aircraft that is in service
 - doing anything on board an aircraft that is in service that puts the safety of the aircraft, or

- any person on board or outside the aircraft, at risk
- placing, or causing to be placed, on board an aircraft that is in service anything that puts the safety of the aircraft, or any person on board or outside the aircraft, at risk
- putting the safety of an aircraft at risk by communicating false or misleading information
- putting the safety of aircraft at risk by interfering with, damaging or destroying air navigation facilities
- taking control of an aircraft by force, or threat of force, or any other form of intimidation or by any trick or false pretence
- use of cabin medical equipment.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

AVIF5003 Manage human performance and team resources during air traffic control operations

Modification History

Release 2. ISC upgrade - a statement relevant to Defence Aviation has been added to the Application of the unit.

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to Manage human performance and team resources during air traffic control operations, in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority and national operating standards.

It includes maximising personal performance, managing errors and participating as a team member within an air traffic services environment.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to air traffic control duties that complement the technical skills of air traffic controllers, and contribute to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military air traffic services across a variety of operational contexts within the Australian aviation industry in various time, weather and traffic conditions associated with psychological and/or physiological limitations to performance.

Operations are conducted as part of commercial and military air traffic services across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Use for Defence Aviation is to be in accordance with relevant Defence Orders, Instructions, Publications and Regulations.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Maximise personal performance

2 Manage error

3 Participate as a team member

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Factors affecting individual human performance are monitored and managed

1.2 Appropriate assertiveness is applied

1.3 Personal workload is regulated by prioritising work tasks

1.4 Human machine interface (HMI) is optimised to enhance human performance

1.5 Decisions taken to manage overall performance are employed

2.1 Error prevention techniques are applied

2.2 Errors are recognised and rectified

2.3 Undesired states, resulting from errors, are recovered

2.4 Personal responsibility for own errors is acknowledged

3.1 Roles and responsibilities of others are considered and responded to appropriately

3.2 Duty of care towards others is applied

3.3 Situational leadership and followership skills are applied to increase team output

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to AVIF5003B Manage human performance and team resources during air traffic control operations.

Links

Assessment Requirements for AVIF5003 Manage human performance and team resources during air traffic control operations

Modification History

Release 2. ISC upgrade - a statement relevant to Defence Aviation has been added to the Application of the unit.

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- acknowledging, inquiring and observing when managing human performance
- adhering to standard operating procedures
- allocating attention according to priorities
- applying reasoning and decision making
- communicating effectively with others
- listening actively
- managing operating environment in accordance with standard operating procedures
- reporting and rectifying identified problems promptly
- requesting assistance from others as required
- responding to stressful situations with a considered and measured approach
- taking actions to mitigate effects of external threats to personal performance
- working systematically with required attention to detail.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- decision making techniques
- duty of care principles and application
- fatigue management systems and the effects of shift work
- human machine interface (HMI) setup to enhance performance
- incident and accident causation models

- just culture policy and principles, including individual and organisational accountabilities surrounding the reporting and investigation of air traffic service attributable safety occurrences
- medical requirements for an air traffic controller licence, including responsibilities for fitness for duty
- physiological factors affecting human performance
- principles and practices for leadership and followership within work teams
- psychological factors affecting human performance
- recency and currency requirements
- regulatory requirements covering length of shift and break requirements
- relevant legislation and workplace procedures
- relevant work health and safety (WHS)/occupational health and safety (OHS) procedures and regulations
- threat and error management.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- acceptable means of simulation assessment.
-

AVIF5013 Provide search and rescue alerting and emergency response

Modification History

Release 2. ISC upgrade - a statement relevant to Defence Aviation has been added to the Application of the unit. SAR acronym has been removed from the title.

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to provide search and rescue (SAR) alerting services, in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority and national operating standards.

It includes providing emergency response and providing search and rescue alerting.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to air traffic control duties that complement the non-technical skills of air traffic controllers, and contribute to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military air traffic services across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Use for Defence Aviation is to be in accordance with relevant Defence Orders, Instructions, Publications and Regulations.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Provide emergency response

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Critical initial actions are carried out in accordance with emergency plans and checklists
- 1.2 Response to abnormal or emergency situations is provided using standard operating procedure
- 1.3 Separation is applied during abnormal or emergency situations
- 1.4 Priority service is provided to emergency situations
- 1.5 Standard emergency phraseologies are used
- 1.6 Critical information is relayed and updated
- 1.7 Abnormal or emergency situations are coordinated and transferred to other responsible units as required
- 1.8 Appropriate emergency phase is declared in accordance with standard operating procedure
- 1.9 Emergency situations are recorded and events are reported in accordance with standard operating procedure

2 Provide search and rescue alerting

- 2.1 Critical event times for search and rescue alerting are monitored and actioned
- 2.2 Appropriate emergency phase is amended when required
- 2.3 Search and rescue information is coordinated and/or relayed
- 2.4 Actions are completed and reviewed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to AVIF5013A Provide SAR alerting and emergency service.

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for AVIF5013 Provide search and rescue alerting and emergency response

Modification History

Release 2. ISC upgrade - a statement relevant to Defence Aviation has been added to the Application of the unit.

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating clearly and concisely to relevant stakeholders using standard and non-standard phrases
- communicating effectively when providing search and rescue (SAR) alerting and emergency response
- comprehending incoming information and responding effectively
- declaring emergency phases
- initiating in-flight emergency response (IFER) and implementing Aerodrome Emergency Plan (AEP)
- maintaining air traffic services to other traffic during emergencies and abnormal operations
- monitoring and responding to alarms
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring critical SAR event times
- operating equipment in accordance with standard operating procedures
- regulating own workload in abnormal or emergency situations
- responding and updating checklists
- responding to SAR alerting
- responding to stressful situations with a considered and measured approach
- using emergency messages, phrases and signals
- working systematically with required attention to detail.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- documentation for providing SAR alerting and emergency response including recording emergency and/or abnormal flight related information
- emergency and abnormal human machine interface (HMI) indications including alerts and alarms
- emergency checklists and documentation
- emergency separation standards
- emergency communications
- IFER documentation
- IFER management process
- jurisdictions related to SAR for different aircraft operations
- relevant and environmental procedures and regulations
- SAR time (SARTIME) criteria and emergency phase declaration
- SAR watch (SARWATCH) criteria and emergency phase declaration
- SAR organisations and authorities
- types of in-flight emergencies
- use of checklists and other documentation.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

- acceptable means of simulation assessment.

AVIG0001 Work effectively in a transport security environment

Confidential Content

Confidential - content not available

Assessment Requirements for AVIG0001 Work effectively in a transport security environment

Confidential Content

Confidential - content not available

AVIG0002 Lead a work team or group in a controlled environment

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to lead a team to implement regulations and policies during aviation safety and service operations in compliance with relevant regulatory requirements, national and international operating standards.

It includes complying with relevant regulations and legal obligations, complying with established industrial relations practices and requirements, and complying with relevant local laws and regulations.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to safety management duties of flight and ground crews and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

G – Teamwork

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Participate in work team/group planning

1.1 Requirements of a team/group task are identified and clarified in conjunction with team/group members to ensure appropriate interpretation of specifications enterprise requirements

1.2 Hazards are identified, risks are assessed and control measures implemented

1.3 Task is interpreted and relevant steps identified in conjunction with team/group members to ensure efficient conduct of work to meet specifications and enterprise requirements

1.4 Steps are planned in conjunction with other personnel to allow achievement of practical outcomes in accordance with enterprise and/or manufacturer procedures

2 Manage and develop work team/group performance

2.1 Task activities are assigned to team/group members based on competence, expertise and availability

2.2 Team/group members are advised about symptoms and effects of fatigue, drugs and alcohol, safe lifting techniques and other work health and safety (WHS)/occupational health and safety (OHS) policies

2.3 Performance measures and requirements are agreed with team/group members in accordance with enterprise procedures

3 Participate in and facilitate work team/group to achieve tasks

3.1 Work activity is organised and carried out with team/group members and other personnel using relevant communication processes to ensure safe, unambiguous and appropriate sequencing of tasks

3.2 Individuals and teams/groups are actively encouraged to take individual and joint responsibility

4 Document and review work team/group tasks

4.1 Necessary documentation related to job planning and progress is completed and recorded in accordance with statutory, manufacturer and enterprise requirements

- 4.2 Outcomes of team/group task activities are compared with planned objectives, task instructions and specifications to ensure all requirements have been met

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AVIG0002 Lead a work team or group in a controlled environment

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and recommending improvements to services, resource allocation and use
- leading and encouraging team members
- modifying team activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising team activities in terms of planned schedule
- negotiating and working effectively with team members
- operating electronic communications equipment to required protocol
- planning team activities, including predicting consequences and identifying improvements
- reading, interpreting and following relevant instructions, procedures
- selecting and appropriately applying technology, information systems and procedures to complete workplace tasks

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- coaching and mentoring approaches
- principles, duty of care and obligations within the Australian aviation industry
- relevant work health and safety (WHS) and environmental protection policies and procedures
- relevant regulatory and codes of practice requirements
- strategies to implement continuous improvement processes
- techniques to encourage appropriate participation of team/group members
- typical problems that can occur when leading a work team and related appropriate action that

can be taken

- workplace policies and plans, including procedures for training and development
- workplace protocols and procedures for leading work teams.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIG0003 Work effectively in the aviation industry

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to work effectively in the aviation industry, in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes determining appropriate work roles, contributing to the planning of activities working with others, and following work health and safety (WHS) procedures.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to teamwork duties of aviation personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

No licensing, legislative, regulatory or certification requirements are applicable to this unit at time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

G – Teamwork

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Determine appropriate work roles within an aviation workplace

1.1 Work instructions, performance requirements, workplace procedures and WHS requirements are considered when identifying work roles for each team member

1.2 Contributions are made to the team to assist in determining appropriate work roles and responsibilities required to successfully and safely complete work activities

2 Contribute to planning the successful, safe and efficient outcome of a work activity

2.1 Suggestions and information are contributed to assist the planning of work activities and to minimise delays to stakeholders

2.2 Hazards are identified, risks are assessed and hazard management implemented

2.3 Safety issues within an airport environment are identified and contributions are made to minimise risks to team members

3 Work with others in the aviation industry

3.1 Correct aviation terminology relevant to the context of work being undertaken is used to communicate with stakeholders

3.2 Contributions are made to assist in the safe and efficient completion of work activities

3.3 Within scope of own job role, assistance is given to team members to complete assigned tasks

3.4 Work tasks are completed in accordance with relevant aviation workplace procedures, industry rules and regulations

3.5 Factors affecting the efficient completion of a work task are identified and contributions are made to minimise the impact

3.6 Workplace technology and equipment is operated in accordance with manufacturer instructions, workplace policies and procedures, and WHS regulations

3.7 Within scope of own job role, contributions are made to the team and supervisors to improve work practices and

- procedures
- 4 Follow WHS procedures within an aviation workplace**
- 4.1** Airport and workplace policies and procedures are clarified as required and executed when dealing with accidents, fires and other emergencies
 - 4.2** Potential causes of incidents are identified and reported
 - 4.3** Actions are taken to minimise safety risks to the public and airport personnel, and the risk of property damage
 - 4.4** WHS procedures for controlling risks are clarified as required, followed and applied in day-to-day work activities
 - 4.5** WHS procedures required for working around machinery and aircraft are correctly followed
 - 4.6** Protective clothing is worn and personal protective equipment is correctly used in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIG2002 Work effectively in the aviation industry.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIG0003 Work effectively in the aviation industry

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- communicating effectively with others
- contributing suggestions and information to assist planning a work activity
- contributing to a group discussion to identify work roles and responsibilities
- identifying safety hazards in an aviation workplace and taking action to minimise risks to all team members by following work health and safety (WHS) procedures
- identifying, reporting and/or rectifying problems with work tasks
- implementing work health and safety (WHS) procedures and relevant regulations
- monitoring and suggesting modifications to team activities to meet a planned schedule
- obeying workplace procedures, signage, industry rules and regulations
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- using aviation technology to communicate with team members correctly
- using workplace technology and equipment to achieve work tasks
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- aviation industry workplace structures
- aviation terminology
- cultural differences and their potential impact on an aviation workplace

- industry rules and regulations applicable to working safely
- principles of team communication
- principles of teamwork
- roles and responsibilities of team members
- techniques to identify potential safety risks in an aviation workplace
- typical misunderstandings and problems that can occur in an aviation workplace and appropriate ways of dealing with them
- WHS requirements and responsibilities in the aviation industry
- WHS signs and signals
- workplace procedures, signage, industry rules and regulations, and duty of care requirements
- aviation equipment and technology, including:
 - aircraft
 - air traffic control systems
 - catering equipment
 - computers
 - phones
 - radio
 - refuelling equipment
 - security screening equipment
 - vehicles and transporters
- hazards related to working in the aviation industry, including:
 - broken and damaged equipment
 - chemicals and other harmful substances
 - equipment emitting harmful radiation or electronic signals
 - extremes in weather conditions
 - flammable materials and fire hazards
 - floor surfaces
 - lifting practices
 - lighting levels
 - movement of equipment, goods, vehicles or aircraft
 - prop wash or jet blast from aircraft
 - water hazards
 - traffic flows, vehicle and equipment operation
- appropriate PPE.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the

time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements. Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIG2003 Work in a socially diverse environment

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to work in a socially diverse environment, in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes communicating with customers and colleagues from diverse backgrounds, and dealing with cross-cultural misunderstandings.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to teamwork duties of aviation personnel, and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Use for Defence Aviation is to be in accordance with relevant Defence Orders, Instructions, Publications and Regulations..

Pre-requisite Unit

Not applicable.

Competency Field

G – Teamwork

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Communicate with customers and colleagues from diverse backgrounds

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Customers and colleagues from all cultural groups are valued and treated with respect and sensitivity

1.2 Cultural differences are accommodated in verbal and non-verbal communication

1.3 Where language barriers exist, efforts are made to communicate by using gestures or simple words in the other person's language

1.4 Assistance from colleagues, reference books or outside organisations is obtained as required

2 Deal with cross-cultural misunderstandings

2.1 Issues that may cause conflict or misunderstanding in the workplace are identified

2.2 Difficulties are addressed with appropriate people and assistance is sought from team leaders

2.3 When difficulties or misunderstandings occur, possible cultural differences are considered

2.4 Efforts are made to resolve misunderstandings, taking account of cultural considerations

2.5 Issues and problems are referred to appropriate team leader/supervisor for follow-up

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Outside organisations must include one or more of the following:

- appropriate government agencies
- diplomatic services
- educational institutions
- interpretative services
- local cultural organisations

Unit Mapping Information

This unit replaces and is equivalent to AVIG2003A Work in a socially diverse environment.

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for AVIG2003 Work in a socially diverse environment

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- implementing work health and safety (WHS)/occupational health and safety (OHS) procedures and relevant regulations
- modifying activities depending on differing operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying any problems, problems, faults or malfunctions promptly, in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- working collaboratively with others in a socially diverse environment
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- basic culture of Australia's indigenous and non-indigenous peoples
- cultural differences:
 - age
 - disabilities
 - family obligations
 - family-structure
 - forms of address
 - language
 - levels of formality/informality
 - non-verbal behaviour
 - personal grooming
 - product preferences
 - race
 - recognised holidays
 - sexual preference
 - specific needs
 - work ethics
- principles of equal employment opportunity (EEO) and anti-discrimination legislation as they apply to individual employees
- principles that underpin cultural awareness
- recognition of different cultural groups in Australian society
- recognition of various international customer groups (as appropriate to the sector and individual workplace)
- relevant Australian and state/territory anti-discrimination legislation and equal opportunity legislation
- typical cross-cultural misunderstandings and problems that can occur in the workplace, and appropriate ways of dealing with them
- what it means to be culturally aware
- when attempts to overcome language barriers may be required:
 - answering simple enquiries
 - describing goods and services
 - giving simple directions
 - giving simple instructions
 - meeting and greeting/farewelling customers
 - preparing for, serving and assisting customers.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include

requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

AVIH0006 Navigate remote pilot aircraft systems

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to navigate remote pilot aircraft systems (RPAS) in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes preparing charts and flight plans, complying with airspace procedures, conducting departure procedures and maintaining RPAS in operational areas. It also includes navigating RPAS in visual line of sight (VLOS), applying lost link and radio communication procedures, and executing arrival procedures.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to route planning and navigation duties of aviation personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew remote pilot aircraft (RPA) environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

H – Route Planning and Navigation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---|--|
| 1 Prepare charts and flight plan | <p>1.1 Suitable maps, aeronautical charts and weather briefings for intended operation are selected and flight plan is prepared</p> <p>1.2 Pre-operations information and Notice to Airmen (NOTAM) is accessed, analysed and applied to flight plan</p> <p>1.3 Hazards are clearly indicated on charts and risk controls are implemented</p> <p>1.4 Effects of wind velocity, adverse environmental conditions and contingency actions are planned for</p> |
| 2 Comply with CASA standard operating conditions | <p>2.1 CASA standard operating conditions are complied with and air traffic regulations are maintained</p> <p>2.2 Airspace awareness is maintained</p> |
| 3 Conduct departure procedures | <p>3.1 Remote pilot station is organised and essential information is accessed</p> <p>3.2 Departure administration tasks and communications are conducted</p> <p>3.3 Orientation to ground level is maintained</p> <p>3.4 Control of RPAS is given precedence over conducting navigation and communication tasks</p> <p>3.5 Situational awareness and lookout is maintained using a systematic scan technique</p> <p>3.6 Local and published noise abatement requirements and curfews are observed</p> <p>3.7 Separation with other air traffic is maintained</p> |
| 4 Maintain RPAS in operational area | <p>4.1 Planned route is followed</p> <p>4.2 Communication tasks are complied with</p> <p>4.3 RPAS endurance is monitored and energy reserve needs are revised</p> |

- 4.4 Pre-descent or navigation turning point checks are executed if required
 - 4.5 Air traffic separation is maintained at all times
 - 4.6 RPAS is controlled
 - 4.7 Deteriorating visual meteorological conditions are recognised and appropriate RPAS corrective actions are taken
 - 4.8 Situational awareness and lookout is undertaken using a systematic scan technique
- 5 Navigate RPAS within VLOS**
 - 5.1 VLOS of RPAS is maintained at all times
 - 5.2 Awareness of current and forecast weather conditions is maintained
 - 5.3 Systematic scan technique is implemented at all times
 - 5.4 Hazards and threats are identified and appropriately controlled
 - 5.5 Effects of wind velocity, adverse environmental conditions and contingency actions are responded to as required
 - 5.6 Situational awareness is maintained at all times
- 6 Apply abnormal and emergency situation response procedures**
 - 6.1 Remote piloted aircraft is configured to maintain safe operating conditions within defined airspace requirements during abnormal and emergency situations
 - 6.2 Remote piloted aircraft position and intention broadcasts are made to local and area traffic, including air traffic services
 - 6.3 Appropriate radio communication failure procedures during abnormal or emergency situations are selected
- 7 Perform arrival and landing**
 - 7.1 Aircraft separation, lookout and tracking tolerances are maintained within the control area
 - 7.2 Wind velocity and direction are assessed to confirm clearance instructions and landing direction
 - 7.3 Aircraft is landed in the defined landing zone in

accordance with documented procedures

7.4 Perform documented shutdown procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is not equivalent to AVIH3019 Navigate remote pilot aircraft systems.

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIH0006 Navigate remote pilot aircraft systems

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying aviation risk management processes to remote pilot aircraft systems operations
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant remote pilot aircraft systems (RPAS) aeronautical knowledge
- applying relevant approach and landing procedures
- applying relevant departure procedures
- applying sound airmanship skills during controlled aerodrome operations, including:
 - aircraft departure
 - aircraft arrival
 - aircraft landing and dispersal
- determining area wind velocity and wind direction
- identifying and correctly using relevant equipment
- identifying relevant operational information from Enroute Supplement Australia (ERSA) and Notice to Airmen (NOTAM)
- implementing contingency plans and modifying activities depending on workplace contingencies, situations and environments
- interpreting weather forecasts and local observations
- maintaining compliance with regulatory requirements
- navigating RPAS tasks, including:
 - visual line of sight (VLOS)
 - visual meteorological conditions
- obtaining and interpreting traffic information
- performing appropriate actions in abnormal operations and emergencies
- performing navigational functions within the parameters of applicable regulations, orders and operations manual procedures
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs

- applying appropriate radio communication failure procedures during abnormal or emergency situations
- sourcing and interpreting aviation weather forecast products and services as appropriate
- transmitting appropriate aircraft position and intention broadcasts.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aviation map reading and understanding spot heights and elevation utilising SMS
- air navigation techniques applicable to RPAS operations
- characteristics of different visual chart types
- chart reading techniques
- identification and navigational tolerances of control area (CTA), control zone (CTR), and prohibited, restricted and danger (PRD) areas
- limitations of RPAS navigation systems
- potential impacts of specific weather phenomena on RPAS operations
- principles of operation of RPAS navigation systems
- Civil Aviation Safety Authority (CASA) approved drone safety app
- Civil Aviation Safety Regulation (CASR) Part 61 Manual of Standards Schedule 3 Aeronautical Knowledge
- Notice to Airmen (NOTAM) information requirements
- radio failure procedures
- standard radio telecommunication phraseology
- air traffic services information requirements
- Class C, D and G airspace operating requirements
- controlled airspace
- danger areas
- radio failure procedures
- restricted airspace
- standard radio telecommunication phraseology
- visual flight rules (VFR)
- visual navigation charts (VNC).

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate,

assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIH0007 Operate remote pilot aircraft systems under night visual line of sight (NVLOS)

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to operate remote pilot aircraft systems (RPAS) flight under night visual line of sight (NVLOS) in compliance with the relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes determining RPAS NVLOS flight requirements, obtaining and using operational documents, preparing NVFR flight plans, making flight notifications and programming navigation systems.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to route planning and navigation duties of flight crew and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

H – Route Planning and Navigation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---|--|
| 1 Determine aircraft meets requirements for NVLOS flight | 1.1 Aircraft requirements for NVLOS flight are determined |
| | 1.2 Flight and navigation instruments, minimum electrical lighting, navigation equipment and any other requirements fitted to aircraft are checked to ensure they are suitable and serviceable for NVLOS flight |
| 2 Obtain and use current operational documents | 2.1 Operational documents applicable to flight are obtained and checked for currency |
| | 2.2 Applicable information contained in documents for flight planning and management is interpreted and applied |
| | 2.3 Documents required for flight are stowed and their accessibility for pilot during flight is ensured |
| 3 Prepare flight plan for NVLOS flight | 3.1 Charts suitable for intended NVLOS flight are selected and prepared |
| | 3.2 Applicable information to prepare a flight plan that details tracks, distances, times, altitudes to be flown and fuel requirements to reach destination are obtained, analysed and applied |
| | 3.3 Hazards are identified, risks are assessed and hazard management is implemented |
| | 3.4 Meteorological, airways facilities, area of operation and Notice to Airmen (NOTAM) information applicable to planning and conducting a flight is obtained, interpreted and applied |
| | 3.5 Routes to optimise options in engine failure are planned |
| 4 Determine operational requirements | 4.1 Power requirements due to weather and navigation aid availability are determined in accordance with operational requirements |
| | 4.2 Total fuel requirements are calculated |

- | | | |
|------------------------------------|------------|--|
| 5 Make flight notification | 5.1 | Flight notification is prepared for planned NVLOS flight |
| | 5.2 | Completed flight notification is submitted |
| | 5.3 | Flight notification acceptance is confirmed |
| 6 Program navigation system | 6.1 | Data is prepared for transfer to approved airborne navigation system |
| | 6.2 | Navigation data is loaded and checked |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AVIH0007 Operate remote pilot aircraft systems under night visual line of sight (NVLOS)

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant aeronautical knowledge
- applying relevant legislation and workplace procedures
- calculating fuel requirements
- communicating effectively with others
- completing relevant documentation
- determining alternate landing area requirements and suitability for a night visual flight to a specified destination given relevant information, including Notice to Airmen (NOTAM)
- determining fuel quantity required for a night visual flight
- determining holding requirements due to weather, traffic or traffic advisory
- determining currency of operational documents
- determining meteorological forecasts required for a night visual flight
- determining whether a flight should proceed based on available meteorological forecasts
- extracting and applying relevant information from operational documents
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) and relevant regulations
- interpreting and following operational instructions and prioritising work
- interpreting meteorological forecasts
- interpreting navigation charts
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults and malfunctions promptly in accordance with

workplace procedures

- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- selecting suitable navigation aids/systems
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- airspace requirements and procedures under night visual line of sight (NVLOS) conditions
- critical point (CTA) and point of no return (PNR)
- documents required to be carried on a night visual flight
- factors affecting en route performance, range and endurance
- icing conditions and hazards
- limit of NVLOS operations in a single-engine aircraft
- limitations and errors of navigations aids/systems
- meteorological considerations for a NVLOS flight
- NVLOS and procedures
- NVLOS cruising levels, selection and hazards
- NVLOS route planning requirements
- pilot medical fitness and qualifications necessary for night visual flight
- privileges of NVLOS rating
- procedures for flight plan amendments and revised estimates for a night visual flight
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders pertaining to NVLOS and flight planning requirements
- relevant WHS and environmental procedures and regulations
- requirements for an alternate landing area
- requirements for in-flight progress reports
- requirements for submission of flight notification and search and rescue watch (SARWATCH)
- specification of aircraft electrical lighting, radio communication and navigation equipment required for night visual flight
- specification of aircraft flight instruments required for night visual flight
- speed restrictions for night visual flight
- use of a navigational computer
- validity of a given meteorological forecast for a night visual flight.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training

Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIH0008 Operate remote pilot aircraft systems in extended visual line of sight (EVLOS)

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to operate remote pilot aircraft systems (RPAS) in extended visual line of sight (EVLOS) in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes operating and managing RPAS during normal flight and managing RPAS during abnormal and emergency procedures.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to equipment and system operations of flight or ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew RPAS environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

W – Equipment and Systems Operations

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Operate RPAS during normal flight

- 1.1 Command controls systems are checked and tested for the range of operation
- 1.2 Crew resources are managed prior to operations including observer briefings
- 1.3 RPAS, sub-systems and devices are operated to achieve operational requirements
- 1.4 RPAS, sub-systems and devices are monitored using a systematic scan technique
- 1.5 RPAS and flight environment information is analysed to identify actual and potential threats or errors
- 1.6 RPAS automation is utilised to manage control station workload
- 1.7 Checklist procedures are implemented during normal RPAS operations

2 Operate RPAS during abnormal and emergency procedures

- 2.1 Abnormal or emergency situations are identified, diagnosed and communicated
- 2.2 RPAS control is maintained at all times
- 2.3 RPAS abnormal or emergency checklist procedures are implemented to maintain safety of flight
- 2.4 Course of action is decided, implemented, evaluated and revised to achieve safest outcomes
- 2.5 Location and operation of emergency systems applicable to RPAS are explained

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work

environment.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AVIH0008 Operate remote pilot aircraft systems in extended visual line of sight (EVLOS)

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- interpreting remote pilot aircraft systems (RPAS) displays
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- performing systematic scan technique for monitoring RPAS, sub-systems (equipment) and devices
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- undertaking fault finding in RPAS
- using automated systems to manage workload
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- aeronautical decision-making processes relevant to RPAS operations
- effective communication
- radio protocols between flight crew
- observer briefings
- command and control links including:
 - link quality
 - radio range effectiveness
 - link security
 - setting up antennas and/or antenna trackers
- error management, including error types, causes and consequences
- fatigue risk management
- human factors relevant to RPAS operations in extended visual line of sight (EVLOS)
- human performance and its limitations, including the senses, memory and situational awareness
- normal, minimum and maximum fuel pressures or battery/power levels and power draw
- risk identification, analysis and control
- individual remote pilot aircraft sub-systems as applicable to RPAS type and relevant rating/endorsement requirements, including:
 - battery/fuel/power system:
 - use of a schematic diagram of battery/fuel/power system to explain layout and normal operating procedures
 - likely faults that may affect battery/fuel/power system
 - emergency operating procedures for battery/fuel/power system
 - operation of /battery/fuel/power selector panel or display
 - use of cross-feed or power distribution
 - fuel-dumping procedures
 - full battery/fuel capacity and fuel grade
 - hydraulic system, including:
 - use of a schematic diagram of hydraulic system to explain layout and normal operating procedures
 - likely faults that may affect hydraulic system
 - emergency operating procedures for hydraulic system
 - units or services operated by hydraulics
 - type of hydraulic fluid, operating pressure and capacity of reservoir
 - flight environment information must include one or more of the following:
 - head up display (HUD) suitable for flight
 - RPAS control systems suitable for flight indications, including height, speed, direction

and location

- electrical system, including:
 - use of a schematic diagram of electrical system to explain type/s of electrical system
 - likely faults that may affect electrical system
 - emergency operating procedures for electrical system
 - voltage and amperage of battery or power cell
 - number and output of generators
 - methods of circuit protection
 - location of fuses and circuit breakers
 - precautions to be taken when operating electrical devices
 - instruments and displays operated by electrics
- oil/lubrication system, including:
 - use of a schematic diagram of oil system to explain functions of oil system
 - likely faults that may affect oil system
 - emergency operating procedures for oil system
 - number of tanks, capacity and oil grade
 - normal, minimum and maximum oil pressure and temperature
 - operation of oil cooling system
- autopilot, including:
 - principles of operation of autopilot system
 - likely faults that may affect autopilot system
 - emergency operating procedures for autopilot system
 - identification of power sources, voltage or pressure
 - procedure to determine gyros are operating normally
 - procedure to engage autopilot
 - normal and emergency procedure to disengage autopilot
 - limits of gyro units
- detection and avoidance systems, including:
 - surveillance and collision avoidance functions of detection and avoidance systems
 - system limitations, selectivity and inhibits
 - basic components of detection and avoidance systems
 - identification and demonstration of controls or explanation of function of RPAS control station
 - detection and avoidance systems visual displays and symbology
 - functions of audio alerts and annunciations
 - appropriate crew response to multiple detection and avoidance systems events
 - recall of radiotelephone procedures following a detection and avoidance system alert
 - requirements for a written report of a detection and avoidance systems alert and to whom it must be submitted
- automated system, including:

- limitations of automated systems
- operating procedures for systems, such as flight management system, auto throttle/engine/thrust control, flight director system, automated aircraft navigation systems, automated engine condition and monitoring system
- workload management procedures for utilising automated systems
- warning systems/indicators to identify automated systems failure
- RPAS checklists, including:
 - explanation of the normal system operating procedures of RPAS, sub-systems and devices used to operate specific RPAS, including use of published scans and checklists, immediate action items, warnings and limitations
- stress, workload and time pressure management.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIH0009 Manage aircraft flight planning and performance as pilot in command

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to manage aircraft flight planning and performance as pilot in command (PIC) in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes managing flight planning activities, undertaking pre-flight preparations, and managing pre-departure preparations and taxi procedures. It also includes managing aircraft departure procedures, aircraft climb out and cruise, and managing the conduct of approach, landing and post-flight procedures.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to route planning and navigation duties of a PIC and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently without supervision within a multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

H – Route Planning and Navigation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Manage flight planning activities

- 1.1 Aircraft requirements for visual or instrument flight are determined
- 1.2 Current operational documents are obtained and used to support flight planning
- 1.3 Charts and flight plans for visual or instrument flight are prepared
- 1.4 Visual or instrument operational requirements are determined
- 1.5 Notifications for flight are made in accordance with regulatory requirements
- 1.6 Navigation and flight management systems to record flight planning and performance data are managed in accordance with organisational procedures

2 Undertake pre-flight preparations

- 2.1 Cockpit preparation is performed
- 2.2 All available flight conditions data for planned flight is accessed, analysed and acted on
- 2.3 Pre-flight inspections and tasks are carried out in accordance with workplace procedures
- 2.4 Engine start is performed in accordance with aircraft type and standard operating procedures (SOPs)
- 2.5 Take-off and departure clearances from air traffic control (ATC) are requested

3 Manage pre-departure preparations and taxi procedures

- 3.1 Pre-take-off preparations are performed
- 3.2 Cockpit crew and cabin crew are engaged in briefings and handover communications
- 3.3 Effective communications are employed with aviation team and passengers

- 3.4 Taxi and take-off procedures are performed in accordance with aircraft type, regulatory requirements and SOPs
 - 3.5 Abnormal and emergency situations occurring during taxi are managed
 - 4 **Manage aircraft departure procedures**
 - 4.1 Normal take-off is performed
 - 4.2 Instrument take-off is performed
 - 4.3 Upwind, crosswind and downwind take-off is performed
 - 4.4 Rejected take-off is performed
 - 4.5 Abnormal and emergency situations occurring during aircraft departure are managed
 - 5 **Climb aircraft**
 - 5.1 Pilot navigated standard instrument departure (SID) is conducted
 - 5.2 Radar-vector SID is conducted
 - 5.3 Radio navigation is changed in accordance with published procedures
 - 5.4 Aircraft speed is increased in accordance with aircraft type and SOPs
 - 5.5 Abnormal and emergency situations occurring during climb are managed
 - 6 **Cruise aircraft**
 - 6.1 Normal procedures are performed at the top of the climb
 - 6.2 Administrative tasks are undertaken
 - 6.3 Radio navigation is used to supplement flight management system (FMS)
 - 6.4 Descent preparation and arrival briefing is undertaken
 - 6.5 Abnormal and emergency situations occurring during cruise are managed
 - 7 **Manage approach to land and landing procedures**
 - 7.1 Normal approach to landing is conducted in accordance with aircraft type and SOPs
 - 7.2 Crosswind approach to landing is conducted in

- accordance with aircraft type and SOPs
- 7.3** Approach to landing is undertaken in accordance with relevant aerodrome navigation system
- 7.4** Abnormal and emergency situations occurring during approach and landing are managed
- 8 Conduct aircraft landing**
- 8.1** Normal landing is carried out in accordance with aircraft type, regulatory requirements and SOPs
- 8.2** Crosswind landing is carried out in accordance with aircraft type, regulatory requirements and SOPs
- 8.3** Emergency landing is carried out in accordance with regulatory requirements and workplace procedures
- 9 Conduct post-flight procedures**
- 9.1** Post-landing procedures are completed in accordance with aircraft type, aerodrome requirements, regulatory requirements and workplace procedures
- 9.2** Aircraft is parked and secured
- 9.3** Administrative procedures are carried out
- 9.4** Crew is debriefed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIH0001 Manage aircraft flight planning and performance as pilot in command.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: -

Assessment Requirements for AVIH0009 Manage aircraft flight planning and performance as pilot in command

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing all relevant flight planning and performance data
- allocating task priorities to achieve operational requirements
- applying active listening techniques
- applying relevant aeronautical knowledge
- briefing flight and ground crew
- clarifying crew roles and functions
- clarifying problems and making informed decisions
- communicating effectively with others
- completing checklists and writing reports
- completing routine administrative tasks
- confirming flight route
- delegating tasks to appropriate flight or ground crew personnel
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and responding to air traffic control (ATC) requests and clearances
- interpreting flight information
- interpreting weather and meteorological data
- keeping accurate flight planning and flight performance records
- implementing contingency plans
- maintaining control of aircraft during:
 - normal operations
 - abnormal situations
 - emergency situations
- managing flight planning and performance record keeping
- managing fuel during all phases of flight
- managing inflight medical emergencies
- managing non-published approach procedures
- managing situational awareness during all phases of flight
- monitoring operational outcomes and evaluating flight performance
- monitoring weather during all phases of flight

- programming flight management systems as required
- programming navigation systems
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- taking initiative and responding to changing conditions
- using all forms of aviation communications equipment
- using radio navigation techniques.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- advanced aircraft aerodynamics
- advanced navigation techniques relevant to air transport pilots, including:
 - navigation charts
 - time zones
 - flight instruments
 - compasses
 - radio wave propagation
 - radio navigation aids
 - route navigation
 - basic radar principles
- aerodrome layout, including runways
- aeronautical information service
- aeronautical competency standards relevant to air transport pilots
- aeronautical knowledge standards relevant to air transport pilots
- air defence identification zones (ADIZ)
- automatic flight control systems
- Civil Aviation Safety Regulation (CASR) Part 61 Manual of Standards Schedule 3 Aeronautical Knowledge relevant to air transport operations
- checklists to assist with cockpit preparation
- contingency planning
- dangerous goods compliance
- descent and arrival preparation and procedures
- emergency equipment
- emergency landing processes and procedures
- extended twin-engine operations (ETOPS), including:
 - adequate airport
 - suitable airport
 - auxiliary power unit
 - ETOPS configuration

- extended range operations
- extended range entry point
- fail-safe
- inflight shutdown
- airworthiness
- 60 minute operation
- 120 minute operation
- 180 minute operation
- minimum equipment list
- weather
- fuel
- operational practices and procedures
- flight planning
- one engine inoperative performance
- all engines operating performance
- drift down
- cruise altitude and coverage at 10,000 feet
- holding
- altitude capability
- missed approach
- en route alternate airport requirements
- minima
- precision and non-precision approaches
- fuel and oil supply
- non-standard atmospheric conditions
- fixed radius paths
- flight management systems
- flight planning and flight monitoring:
 - responsibilities
 - delegation of authority
 - determining take-off limits
 - weight and balance calculations
 - route selection and altitudes
 - fuel plan preparation
 - navigation plan preparation
 - inflight computations, revisions or replanning
 - interpretation of maps and symbols
 - interpretation of ATC requirements
 - calculation of critical points, including equi-time point (ETP) and point of no return (PNR)

- flight planning and performance recording systems
- fly-by turns
- fuel management
- ground based augmentation systems (GBAS)
- ground based regional augmentation systems (GRAS)
- handover and takeover protocols
- holding pattern
- instrument approach types, including:
 - 2D approaches
 - 3D approaches
- instrument meteorological conditions
- instrument navigation charts
- missed approach minima and go-around considerations
- operational planning requirements, including:
 - flight planning
 - alternate aerodrome requirements
 - holding fuel requirements
 - night visual flight rules (NVFR) operational requirements
 - planned/alternate destination weather conditions below minima
 - receiver autonomous integrity monitoring (RAIM) prediction implications
- performance based navigation (PBN), including:
 - PBN principles
 - area navigation (RNAV) required navigation performance (RNP) capability
 - core components
 - navigation system performance requirements
 - performance monitoring and alerting
 - RNP specifications and system requirements
 - RNP navigation system errors
 - RNP leg types
 - RNP leg transitions
 - RNP navigation authorisation requirements
 - Global Navigation Satellite System (GNSS) receiver requirements for RNP APCH operations
 - GNSS receiver mode conditions and actions for RNP APCH
 - RNP instrument approach requirements
 - augmented and non-augmented approaches
 - interpret instrument approach procedure (IAP) charts for minima information and operational restrictions
 - validity and accuracy of altimeter subscale setting to obtain elevation or altitude (QNH) for RNP APCH types
 - RNP approach differentiation

- satellite based augmentation System -based augmentation systems (SBAS)
- approved barometric-vertical navigation (APV Baro-VNAV) instrument approach charts
- vertical guidance information and operational considerations
- Baro-VNAV vertical guidance principles
- performance management of both flight and crew
- processes for managing engine failure in flight
- pre-flight considerations, including:
 - aircraft equipment fits
 - aircraft exemptions
- rationale and process for rejected take-off
- role and purpose of flight crew briefings
- rules of the air and air traffic services
- safety considerations and planning factors relevant to visual and instrument flight planning
- SBAS
- standard instrument arrival procedures
- standard instrument departure procedures
- take-off procedures
- taxi procedures
- upwind, crosswind and downwind take-offs
- weight and balance for various aircraft configurations.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIH0010 Plan a flight under visual flight rules

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to plan a flight under visual flight rules (VFR) in compliance with the relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes determining aircraft VFR flight requirements, obtaining and using operational documents, preparing VFR flight plans, making flight notifications and programming navigation systems.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to route planning and navigation duties of flight crew and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

H – Route Planning and Navigation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---|---|
| 1 Determine aircraft meets requirements for VFR flight | <p>1.1 Aircraft requirements for VFR flight are determined</p> <p>1.2 Hazards are identified, risks are assessed and hazard management implemented</p> <p>1.3 Flight and navigation instruments, minimum electrical lighting, navigation equipment and any other requirements fitted to aircraft are checked to ensure they are suitable and serviceable for VFR flight</p> |
| 2 Obtain and use operational documents | <p>2.1 Operational documents applicable to the flight are obtained and checked for currency</p> <p>2.2 Applicable information contained in documents for flight planning and management is interpreted and applied</p> <p>2.3 Documents required for the flight are stowed and their accessibility for the pilot during flight is ensured</p> |
| 3 Prepare flight plan for VFR flight | <p>3.1 Charts suitable for intended VFR flight are selected and prepared</p> <p>3.2 Applicable information to prepare a flight plan that details tracks, distances, times, altitudes to be flown and fuel requirements to reach destination are obtained, analysed and applied</p> <p>3.3 Meteorological, airways facilities, aerodrome and Notice to Airmen (NOTAM) information applicable to planning and conducting a flight is obtained, interpreted and applied</p> <p>3.4 Routes to optimise options in an engine failure are planned</p> |
| 4 Determine operational requirements | <p>4.1 Suitability of aerodrome lighting for night operations is determined</p> <p>4.2 Curfew requirements are complied with</p> <p>4.3 Duration of flight is determined</p> <p>4.4 Holding, alternate and reserve fuel requirements due to weather, navigation aid availability and aerodrome</p> |

- lighting are determined in accordance with operational requirements
- 4.5** Total fuel requirements are calculated
- 5 Make flight notification**
- 5.1** Flight notification is prepared for planned VFR flight
- 5.2** Completed flight notification is submitted
- 5.3** Flight notification acceptance is confirmed
- 6 Program navigation system**
- 6.1** Data for transfer to approved airborne navigation system is prepared
- 6.2** Navigation data is loaded and checked

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIH0002 Plan a flight under visual flight rules.

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIH0010 Plan a flight under visual flight rules

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant aeronautical knowledge
- applying relevant legislation and workplace procedures
- calculating fuel requirements
- communicating effectively with others
- completing relevant documentation
- determining alternate aerodrome requirements and suitability for a visual flight to a specified destination given relevant information, including Notice to Airmen (NOTAM)
- determining currency of operational documents
- determining fuel quantity required for a visual flight
- determining holding requirements due to weather, traffic or traffic advisory
- determining meteorological forecasts required for a visual flight
- determining operational requirements
- determining whether a flight should proceed based on available meteorological forecasts
- extracting and applying relevant information from operational documents
- identifying and correctly using equipment required when planning a flight under visual flight rules (VFR)
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting meteorological forecasts
- interpreting navigation charts
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with

workplace procedures

- selecting and using required personal protective equipment (PPE) conforming to industry and WHS/OHS standards
- selecting suitable navigation aids/systems
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- aerodrome and en route holding procedures
- aircraft fuel planning, including holding, alternate, fixed reserve and usage rates
- aircraft loading calculations and planning factors, including:
 - arm, moment, datum, station and index unit
 - centre of gravity and limitations
 - empty weight, zero fuel weight (ZFW) and ramp weight
 - mean aerodynamic chord (MAC)
 - maximum take-off and landing weights
- airspace requirements and procedures under VFR conditions
- basic and general meteorological considerations and requirements for VFR flight
- basic meteorology, including:
 - local weather
 - forecasts and reports
 - observations
- calculating maximum structural take-off and landing weights from performance charts
- Civil Aviation Safety Regulation (CASR) Part 61 Manual of Standards Schedule 3 Aeronautical Knowledge relevant to visual flight rules
- charts and publications, including:
 - aeronautical information publication (AIP) visual chart types
 - how to decode chart symbols
 - how to interpret topographic detail
 - how to estimate, measure and plot positions and distances on visual charts
 - how to describe map projections used in aviation
 - how to describe methods of representing scale
- computations and conversions of navigation data, including:
 - airspeed
 - ground speed
 - time
 - distance

- air temperatures and pressure heights
- bearings and tracks
- concepts of time, including:
 - coordinated universal (UTC), local mean, local standard and local summer
 - determine civil twilight
 - time conversions
 - daylight timing factors
 - effects of earth rotation and revolution around the sun
 - effects of changes in longitude on local mean time
- critical point and point of no return (PNR)
- density height calculations
- documents required to be carried on a visual flight
- equi-time point (ETP) and PNR diversion requirements
- factors affecting en route performance, range and endurance
- flight planning preparation, including:
 - visual chart selection
 - mandatory briefing requirements
 - weather services available
 - requirements and instructions for VFR flight notification
- general meteorology concepts, including:
 - atmospheric composition
 - atmospheric stability
 - heat
 - temperature pressure
 - humidity
 - clouds and precipitation
 - visibility
 - wind
 - air masses and fronts
 - synoptic meteorology
 - climatology
 - weather services and information
 - flight considerations
- how to determine climb, cruise and descent performance, including:
 - time, speed, distance and fuel flow/quantity
 - appropriate engine settings
 - rates of climb/descent
 - maximum aircraft range and endurance
- icing conditions and hazards
- limit of VFR operations in single-engine or multi-engine aircraft

- limitations and errors of navigational aids and systems
- flight plan preparation
- VFR cruising levels, selection and hazards
- VFR route planning requirements
- pilot medical fitness and qualifications necessary for visual flight
- pilot navigation principles, including:
 - map reading
 - chart orientation
 - map to ground and ground to map
 - position lines to establish ground speed, track error and position fix
 - ground feature selection to establish position
 - chart preparation and selection
 - determine visual flight navigation information
- privileges of the VFR rating
- principles of navigation:
- forms of the earth
- procedures for flight plan amendments and revised estimates for a visual flight
- relevant WHS and environmental procedures and regulations
- relevant sections of CASRs and Civil Aviation Orders
- requirements for an alternate aerodrome
- requirements for in-flight progress reports
- requirements for submission of flight notification and search and rescue watch (SARWATCH) times
- specification of aircraft electrical lighting, radio communication and navigation equipment required for visual flight
- specification of aircraft flight instruments required for visual flight
- speed restrictions for visual flight
- usage of 2D radio navigation aids for visual flight navigation
- use of a navigational computer
- validity of a given meteorological forecast for a visual flight
- visual and instrument flight rules and procedures
- weight and balance calculations.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace

conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Where this unit is used in the context of a commercial pilot licence [CPL(A)] the following operational knowledge must be assessed:

- aerodromes and aeroplane landing areas (ALAs)
- climb, cruise and descent performance
- fuel units.

Where this unit is used in the context of a commercial pilot licence helicopter [CPL(H)] the following operational knowledge must be assessed:

- limitations
- helicopter landing sites (HLS)
- take-off and landing weight
- hover performance
- forward climb performance
- cruise performance
- weight and balance.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIH0011 Manage aircraft performance and load

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to manage aircraft performance and load in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes applying weight and balance control to flight planning, identifying constraints affecting load planning and planning an aircraft load. It also includes applying principles of aircraft balance and longitudinal stability to load planning, identifying aircraft structural limitations, and identifying aircraft weight and performance planning safety factors. It also includes determining aircraft weight and speed limitations, calculating take-off runway requirements, calculating climb performance, calculating landing runway requirements, and determining aircraft buffet boundaries and speeds.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to route planning and navigation duties of flight dispatch personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial or military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

H – Route Planning and Navigation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Apply weight and balance control to flight planning

- 1.1** Components of weight, balance and control are considered and applied in flight planning activities
- 1.2** Weight and control limitations are included in flight planning calculations
- 1.3** Required fuel and payload quantities, including minimum fuel reserves, maximum allowable payloads and fuel quantity limitations, are considered when calculating weight and balance
- 1.4** Calculated aircraft weight centre of gravity (CG) is within aircraft limits and is established for take-off, cruise and fuel economy calculation purposes
- 1.5** Ground handling of baggage and cargo is minimised through load distribution and loading sequence planning
- 1.6** Weight and CG are derived and calculated using basic data methods and applied to flight planning calculations
- 1.7** Comprehensive loadsheet is compiled that includes all required flight performance and load planning data

2 Identify constraints affecting load planning

- 2.1** Implications of advanced sales on payload, weight and control limitations are considered
- 2.2** Aircraft, route, fuel required and performance limitation planning factors are assessed for potential constraints to load planning activities
- 2.3** Hazards are identified, risks are assessed and hazard management implemented
- 2.4** Operator advance index tables and potential impact of weight and fuel minima during seasonal change are identified and considered
- 2.5** Unusual conditions when advanced allotment tables may be exceeded, the operational impacts and associated contingency planning factors are considered

- 2.6** Load planning constraints and limitations are prioritised based on operational and regulatory requirements
- 3 Plan an aircraft load**
- 3.1** Aircraft design and weight, taxi, take-off, landing and zero-fuel weights (ZFW) are reviewed and applied to load planning activities
- 3.2** Operational load planning factors affecting a restriction on weight, operational (phase of flight), environmental, equipment, airspace and airport/aerodrome are considered and applied as required to aircraft load planning
- 3.3** Aircraft operating weight and passenger weight limits are summarised within load planning documentation
- 3.4** Weight of minimum fuel based on ZFW, quantity, fuel type and specific gravity (including fuel quantity conversions) are reviewed and applied to load planning calculations
- 3.5** Available payload based on specific conditions affecting a flight, including maximum take-off weight (MTOW), regulated take-off weight (RTOW), minimum fuel and taxi fuel requirements, are determined
- 3.6** Manual loadsheet, including payload location and last-minute changes, is prepared
- 3.7** Loadsheet, including payload location and last-minute changes, is interpreted and automated
- 4 Apply principles of aircraft balance and longitudinal stability to load planning**
- 4.1** Load planning factors, including balance, CG (variations), balance on the ground, principles of lift and centre of pressure, mean aerodynamic chord (MAC) and functions of stabilisers, are identified and considered when calculating aircraft performance and load
- 4.2** Aircraft point of balance is calculated using aircraft data and aircraft balance principles, and is applied to load planning calculations
- 5 Identify aircraft structural limitations**
- 5.1** Satisfactory aircraft balance calculations are achieved ensuring aircraft is safely loaded, floor strengths have not been exceeded and load/cargo is capable of being satisfactorily restrained
- 5.2** Fuselage structural limits over, forward and aft of the wing, and weight limitations for associated loading

- zones are considered and applied to load planning activities
- 5.3** Maximum allowable package sizes are determined using aircraft tables
- 5.4** Methods of restraint and the effect on passengers and crew, damage and CG, including principles of inertia and forces applied to load, are considered and applied to load planning activities
- 5.5** Advantages and limitations of certified and non-certified cargo pallets and containers, and methods of load security are considered when calculating aircraft load limitations
- 6 Identify aircraft weight and performance planning safety factors**
- 6.1** Aircraft certification considerations, including structural strength, loads, speed limitations, operating environment, performance capability, runway lengths and terrain, are considered and applied to aircraft weight and performance calculations
- 6.2** Aircraft certification standards, including categories, state-based variations, operating weight or CG never exceeding limits, and aircraft flight manual restrictions are considered and applied to aircraft weight and performance calculations
- 6.3** Environmental considerations, including certified aircraft operating envelope, pressurisation capabilities, system limitations and aircraft flight manual envelope charts, are considered and applied to aircraft performance calculations
- 7 Determine aircraft weight and speed limitations**
- 7.1** Positive and negative load factor limitations, including normal and ultimate (structural), speed limitations and differing express terms of speed, are considered and applied to aircraft performance calculations
- 7.2** Boundaries of aircraft operating envelope for a specific weight are determined using flight strength diagrams, illustrating effect of wind gusts, margins of speed limits and turbulence penetration considerations
- 8 Calculate take-off runway requirements**
- 8.1** Turbo-jet aircraft take-off requirements are determined considering clearways and stop-ways, runway requirements and alternatives to balanced field length methods

- 8.2** Critical engine failure speeds, flap positions and reduced thrust take-off stopping distance at critical engine failure speeds are calculated
- 9 Calculate climb performance**
- 9.1** Take-off flight path, climb segments; including terrain and obstacle avoidance; and the effects of weight, altitude and temperature are determined
- 9.2** En route considerations affecting climb performance, such as take-off weight, en route alternate selection and terrain, are considered and applied to aircraft performance calculations
- 9.3** Approach and landing requirement planning factors, including terrain and obstacle avoidance, and effects of weight, altitude and temperature, are considered and applied to aircraft performance calculations
- 10 Calculate landing runway requirements**
- 10.1** Runway landing distance requirements are determined, including effect of aircraft configuration, available stopping distance, and effects of marginal conditions
- 10.2** Landing distance based on varying environmental conditions, effect of obstacles and braking systems is calculated
- 11 Determine aircraft buffet boundary and speeds**
- 11.1** Aircraft buffet characteristics, and the effect of variations of a given weight and speed are identified and applied to aircraft performance calculations
- 11.2** Permissible buffet for a range of aircraft speeds for combinations of weight and altitude, including safe operating margins, is calculated

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIH0003 Manage aircraft performance and load.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIH0011 Manage aircraft performance and load

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying basic principles of weight and performance limitations
- applying fuel, payload and load considerations while respecting regulatory and company approved requirements
- applying knowledge of low and high-speed aircraft buffet characteristics and determining speeds at which aircraft buffet is encountered
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant aeronautical knowledge
- calculating aircraft centre of gravity (CG) arithmetically and graphically using practical methods of and within acceptable ranges
- calculating balance weight required given unequal lengths of arm of beam balance and weight of one pan
- calculating CG of fully loaded aircraft with variable passenger and cargo configurations
- calculating moments about aircraft in flight
- calculating point of suspension given unequal weight in the pans of a beam balance and total length of beam
- communicating effectively with others
- completing relevant documentation
- determining maximum permissible take-off and landing weight under variable operating conditions
- determining permissible weight, altitude and temperature limit data using aircraft operating flight manual in varying conditions
- determining take-off and landing runway length and speeds using aircraft operations and flight manual in varying configurations and conditions
- developing an International Air Transport Association (IATA) loadsheet based on weight, balance and control components
- establishing and applying aircraft climb performance limitations
- identifying aircraft weight and performance planning safety factors
- identifying and correctly using equipment required to manage aircraft performance and load

- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- preparing and planning manual and automated loadsheets based on all known operational constraints and considerations
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults and malfunctions promptly in accordance with workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- using aircraft flight manual charts and graphs to determine buffet boundaries and safe operating conditions
- using aircraft operating environment envelope chart effectively
- using operator advanced allotment tables to determine typical values for various routes, aircraft and operational needs
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aircraft design weight, including:
 - maximum taxi weight
 - maximum take-off weight
 - maximum landing weight
 - maximum zero-fuel weight
- aircraft weight, balance and control definitions:
 - basic operating weight (BOW)
 - dry operating weight (DOW)
 - zero-fuel weight (ZFW)
- critical engine failure speed V1 characteristics, including:
 - weight
 - runway slope
 - runway braking coefficient
 - pressure altitude
 - temperature

- wind component
- flap position
- definition of aircraft moment
- derivation of aircraft data and calculation techniques related to aircraft performance, and load planning factors and considerations
- express terms of speed, including:
 - indicated airspeed (IAS)
 - mach number
 - designed dive speed
 - maximum operating speed
 - normal operating speed
- IATA loadsheet information requirements and compilation, including:
 - flight number
 - aircraft registration
 - dry operating weight and dry operating CG
 - zero fuel weight
 - zero fuel CG
 - take off weight CG (MAC %)
 - landing weight
 - landing weight CG (MAC %)
 - passenger distribution
 - deadload distribution – baggage, cargo and mail
 - details of dangerous goods (NOTOC)
 - details of live and perishable cargo
- IATA numbering scheme for cargo holds
- weight and balance calculations, including:
 - graphical
 - arithmetical
 - $\text{weight} \times \text{arm} = \text{moment}$
 - $\text{total moments} = \text{arm of CG}$
 - use of automated systems
- maximum payload limitations, including:
 - volumetric, floor and loading limitations
 - ramp unload and reload limitations
 - CG
 - dangerous goods
 - differences between DOW and Maximum Zero Fuel Weight (MZFW)
 - passenger capacity
- meaning and calculation of take-off safety speed (V₂)
- operating weight definitions and application to load planning, including:

- basic operating weight (BOW)
- $BOW + \text{crew, crew bags, catering, and spares} = DOW$
- $DOW + \text{payload/passenger load} = ZFW$
- $DOW + \text{take-off fuel} = \text{operating weight (OW)}$
- $ZFW + \text{payload/passenger load} = \text{take-off weight (TOW)}$
- $TOW + \text{taxi fuel} = \text{taxi weight}$
- $TOW - \text{fuel consumed en route} = \text{landing weight (LDW)}$
- $TOW - \text{take-off fuel} = ZFW$
- other terminology relevant to aircraft performance calculations not otherwise defined
- principles of balance control
- principles of weight control
- ramp weight or taxi weight, including:
 - TOW
 - LDW.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIH0012 Implement instrument flight rules planning procedures

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to implement instrument flight rules (IFR) planning procedures in compliance with the relevant regulatory requirements of the Civil Aviation Safety Authority (CASA), national and international civil aviation operating standards

It includes assessing instrument flight planning needs, determining aircraft instrument flight requirements, identifying operational flight documentation, and preparing charts and instrument flight plans. It also includes selecting instrument flight routes, determining operational requirements, releasing an instrument flight plan, and providing extended twin-engine operations (ETOPS) flight planning and flight support.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to route planning and navigation duties of flight dispatch personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

H – Route Planning and Navigation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Assess instrument flight planning needs

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Operator flight planning objectives and factors contributing to and/or influencing these objectives are defined
- 1.2 Conflicting flight planning objectives, including commercial and safety imperatives, are identified
- 1.3 Direct operating costs of a flight plan, including fuel, resourcing, engineering, and navigational and ground handling factors, are considered and assessed for applicability to flight plan
- 1.4 Relationship between different flight planning objectives, including minimum fuel, maximum speed and thrust, minimum cost and varying operational requirements, is determined and applied
- 1.5 Value of flight plan in establishing track, distance, heading, speed, times, optimum route, altitudes, contingency planning, fuel consumption and reserves is assessed
- 1.6 Value of flight plan to air traffic services in establishing reporting points, flight information region crossing and coordination, pre-departure clearances, and traffic flow coordination is assessed
- 1.7 Appropriate state/territory and operator authorisations are obtained to plan and manage a range of instrument flight operation types, including scheduled, non-scheduled, charter, ferry, training, test and publicity flights
- 1.8 Instrument flight planning process is applied while assessing a wide range of planning factors, including type of flight, weather, aircraft type, availability and performance, crew, payload, schedule, departure, en route and destination requirements, state/territory based air service requirements, briefing, flight plan delivery and filing
- 1.9 International Civil Aviation Organization (ICAO) air

- traffic flight plan format, filing and performance-based navigation requirements are determined and applied to instrument flight planning processes
- 2 Determine aircraft instrument flight requirements**
 - 2.1** Aircraft requirements for instrument flight are determined
 - 2.2** Flight and navigation instruments, including minimum electrical lighting, navigation equipment, minimum equipment lists and any other requirements fitted to the aircraft, are identified and assessed to ensure they are suitable and acceptable for instrument flight
 - 3 Identify operational flight documentation**
 - 3.1** Essential operational documentation applicable to instrument flight type is identified for use by flight crew
 - 3.2** Applicable information contained in documents for flight planning and management is interpreted and applied
 - 3.3** Aircraft library requirements, including operating manual suite, aeronautical information publications, logbooks and other relevant flight documents, are identified
 - 4 Prepare charts and instrument flight plans**
 - 4.1** Charts suitable for intended instrument flight are identified, selected and prepared
 - 4.2** Applicable information to prepare a flight plan that details tracks, distances, times, altitudes to be flown and fuel requirements to reach destination are obtained, analysed and applied
 - 4.3** Meteorological, airways facilities, aerodrome and Notice to Airmen (NOTAM) information applicable to planning and conducting a flight is obtained, interpreted and applied
 - 4.4** Navigation information applicable to flight planning is obtained, interpreted and applied
 - 5 Select instrument flight routes**
 - 5.1** Factors contributing to selecting optimum track, great circle track and minimum time track are identified
 - 5.2** Minimum time track on upper air charts is plotted
 - 5.3** Preferred minimum time track is determined and modified as required

- 5.4 Fuel quantities more than minimum fuel are routinely considered, and cost of carriage is assessed and determined in context of overall flight plan
- 6 Determine operational requirements**
- 6.1 Suitability of aerodrome for instrument flight operations is determined
- 6.2 Operational constraints are complied with
- 6.4 Holding, alternate and reserve fuel requirements due to weather, navigation aid availability and aerodrome lighting are determined in accordance with operational requirements
- 6.5 Total fuel requirements are calculated
- 7 Release an instrument flight plan**
- 7.1 All required safety conditions, limitations and regulations are met and gross error checks performed
- 7.2 Flight crew briefing information is collated, including meteorological information, airport status, navigation aids, communication facilities, aircraft equipment and deviations, and reasons for flight plan submission
- 7.3 An ICAO air traffic instrument flight plan is compiled, filed and managed for changes, delays and cancellation purposes
- 7.4 Scheduled or unscheduled flights are re-cleared (re-filed) as required, based on revised flight information, using fuel saving techniques and varying operational requirements
- 8 Provide extended twin-engine operations (ETOPS) flight planning and flight support**
- 8.1 ETOPS planning considerations and regulatory requirements are determined and applied to instrument flight planning activities
- 8.2 ETOPS approval processes for regular passenger transport (RPT) or charter operations are understood and implemented where necessary
- 8.3 System redundancy levels appropriate to ETOPS are identified and applied to ETOPS instrument flight planning activities
- 8.4 ETOPS communication and navigation requirements between aircraft and relevant agencies and aids are determined and applied to ETOPS instrument flight

planning activities

- 8.5** Required ETOPS take-off, destination and alternate aerodrome requirements are assessed for suitability and recorded within flight planning and flight crew operational documentation
- 8.6** Actual or forecast weather conditions for duration of planned flight are assessed for ETOPS planning purposes
- 8.7** Aircraft performance data is interpreted and applied to ETOPS instrument flight planning activities
- 8.8** Relevant flight support information and assistance is provided to pilot in command (PIC) for ETOPS flight planning and normal flight situations
- 8.9** Relevant flight support information and assistance is provided to PIC during abnormal or emergency ETOPS situations

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIH0004 Implement instrument flight rules planning procedures.

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIH0012 Implement instrument flight rules planning procedures

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying knowledge of:
 - climb and descent tables and charts
 - constant mach flight planning tables and charts
 - long range cruise charts and tables
- applying knowledge standard extended twin-engine operations (ETOPS) considerations
- applying published instrument flight rules (IFR) procedures
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- calculating altimeter corrections from authorised sources, true altitude above mean sea level and height above terrain for a range of pressure altitudes and temperatures, and using standard atmosphere tables
- calculating flight time and fuel with varying fuel quantities to determine cost of carriage
- calculating minimum fuel and flight time, including taxi fuel, optimum altitude, use of charts, reserve fuel and critical point (CP) fuel
- calculating minimum fuel to destination to include distant alternates and using destination as the alternate
- communicating effectively with others
- completing relevant documentation
- decoding aviation weather reports, including observing, trending and analysing simultaneous reports and conditions
- determining aircraft limits and maximum payloads
- determining conversion angles, convergency applications, plotting relative true north and grid north using Mercator, lambert conformal and polar stereographic charts
- determining operational requirements
- estimating winds and temperatures at flight levels corresponding to upper-air charts and at intermediate flight levels
- examining surface and upper-air charts in mid-latitude and tropical regions
- examining synoptic and aeronautical prognostic charts to determine movement and time

evolution

- examining typical charts and forecasts for flight planning to decode aerodrome and trend type landing forecasts
- identifying and briefing aeronautical climatology of a specific route
- identifying and correctly using relevant equipment
- identifying and selecting suitable navigation aids/systems
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- inspecting and identifying actual and forecast charts for pressure patterns on surface and upper-air charts, and identifying pressure gradients
- interpreting and following operational instructions and prioritising work
- interpreting instrument flight charts
- interpreting instrument meteorological condition (IMC) forecasts
- interpreting tropopause and maximum winds charts
- interpreting weather observations plotted on standard format synoptic charts
- making flight notifications
- making proficient operational decisions
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- obtaining and using current operational documents
- operating electronic communications equipment to required protocol
- performing calculations for a given true track, true airspeed (TAS) and distance to CP in zero wind, tailwind and beam wind
- performing calculations for a given true track, TAS and endurance, distance to point of no return (PNR) in zero wind, tailwind and beam wind, establish maximum PNR, return to departure airport and alternate airport all engines and one engine inoperative
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance workplace procedures
- reviewing aircraft performance and cruise control procedures and variations using aircraft flight manual graphs
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aerodrome and en route holding procedures
- aircraft documents pouch, including:
 - certificate of airworthiness
 - certificate of registration
 - aircraft radio licence
 - fuel supplier carnet
 - emergency en route charts
 - sabotage checklist
- aircraft fuel planning, including holding, alternate, fixed reserve and usage rates
- aircraft library, including:
 - aircraft operating manual
 - section of operating manual applicable to flight crew
 - aeronautical information publications
 - aircraft journey logbook
- airspace requirements and procedures under IFR conditions
- CP and point of no return
- customs and immigration forms, including:
 - general declaration forms
 - passenger manifest
 - crew manifest
- ETOPS:
 - adequate airport
 - suitable airport
 - auxiliary power unit
 - ETOPS configuration
 - extended range operations
 - extended range entry point
 - fail-safe
 - inflight shutdown
 - airworthiness
 - 60 minute operation
 - 120 minute operation
 - 180 minute operation
 - minimum equipment list
 - weather
 - fuel
 - operational practices and procedures
 - flight planning
 - one engine inoperative performance
 - all engines operating performance

- drift down
- cruise altitude and coverage at 10,000 feet
- holding
- altitude capability
- missed approach
- en route alternate airport requirements
- minima
- precision and non-precision approaches
- fuel and oil supply
- non-standard atmospheric conditions
- factors affecting en route performance, range and endurance
- gross error checking requirements, including:
 - flight designator
 - aircraft registration
 - minimum fuel
 - maximum permissible take-off mass
 - taxi fuel
 - alternate/s
 - fuel over destination
 - wind component and temperature
 - route
 - name of dispatcher
- ground and space-based navigation systems and infrastructure, including:
 - ground-based systems
 - space-based systems
 - global navigation satellite system (GNSS) operating procedure errors
 - continuous descent final approach (CDFA) techniques
- how to determine currency of operational documents
- icing conditions and hazards
- IFR cruising levels, selection and hazards
- IFR route planning requirements
- in an Australian Defence Force (ADF) context, relevant Defence Orders and Instructions
- instrument flight documentation requirements
- instrument flight procedures, including:
 - flight instrument operations, errors and limitations
 - radio communication phraseology
 - lost communications procedures
 - air traffic service requirements
 - instrument chart symbology and information
 - reporting requirements

- 2D/3D instrument approach operations
- altimeter accuracy and variations due temperature
- flight plan validity
- search and rescue times (SARTIME) and pilot obligations
- missed approach requirements
- alternate aerodrome weather minima
- aircraft separation standards
- pilot activated lighting (PAL)
- runway visual approach slope lighting system operation and limitations
- pilot responsibilities
- aircraft transponder operation
- limitations on use of radar on ground
- lowest safe altitude (LSALT), including:
 - calculate route LSALT not specified in aeronautical information publication (AIP)
 - missed approach minimum obstacle clearance
 - minimum obstacle clearance provided by minimum circling altitude
 - track establishment after take-off
 - establish aircraft above LSALT requirements
 - descent below LSALT or minimum safety altitude requirements by day/night/night-visual flight rules (NVFR)
- meteorological considerations for an IFR flight, including:
 - atmosphere, composition and structure
 - International Standard Atmosphere (ISA)
 - atmospheric temperature and humidity
 - units of measurement
 - mechanisms
 - actual atmospheric heating
 - temperature at the earth's surface
 - atmospheric humidity
 - adiabatic processes
 - atmospheric stability
 - vertical distribution of temperature (lapse rate)
 - atmospheric pressures
 - variation to pressure height
 - constant pressure charts
 - pressure-wind relationships
 - horizontal forces acting on the air
 - winds near the earth surface
 - winds in the free atmosphere
 - types of atmospheric turbulence

- mountain waves (rotors)
- formation of clouds and precipitation and processes involved
- motion in cloud formation and precipitation
- formation of types of precipitation
- thunderstorms
- aircraft icing
- visibility and runway visual range (RVR)/slant visual range (SVR)
- components of aerodrome operating minima (AOM) (visibility and RVR)
- causes of reduced visibility
- fog types
- volcanic ash
- surface observations
- upper air observations
- observations from satellites
- station model
- air masses and fronts
- frontal depressions and characteristics
- other types of pressure systems
- climatology
- tropical weather
- aeronautical meteorological reports
- weather reporting services
- analysis of surface and upper-air charts
- synoptic charts in the topics
- prognostic charts
- aeronautical forecasts
- role of international meteorological services
- meteorological communications
- navigation requirements, including:
 - position and distance
 - measurement of distance
 - time and time zones
 - true, magnetic and compass directions
 - gyro heading and grid direction
 - chart projections (all types)
 - International Civil Aviation Organization (ICAO) chart requirements
 - charts used by a typical operator
 - measurement of true airspeed by airspeed indicator
 - measurement of true airspeed by other means

- track and ground speed
- use of slide rules and scientific calculators
- measure of aircraft altitude
- PNR
- CP (equal time point)
- general determination of aircraft position
- introduction to radio navigation
- ground based radar and direction-finding
- relative bearings, including aircraft ADF
- VHF omnidirectional range (VOR) and distance measuring equipment (DME) type radio navigation
- instrument landing system (ILS)
- navigation procedures
- position fixing requirements
- aircraft performance categories and operational implications
- waypoints, symbology and pilot requirements
- visual circling by day or night
- pressure error correction (PEC)
- AOM
- decision altitude (DA)
- normal segment gradient
- tracking tolerances
- speed limitations and restrictions
- operational planning requirements, including:
 - flight planning
 - alternate aerodrome requirements
 - holding fuel requirements
 - NVFR operational requirements
 - planned/alternate destination weather conditions below minima
 - receiver autonomous integrity monitoring (RAIM) prediction implications
- performance-based navigation (PBN), including:
 - PBN principles
 - area navigation (RNAV) required navigation performance (RNP) capability
 - core components
 - navigation system performance requirements
 - performance monitoring and alerting
 - RNP specifications and system requirements
 - RNP navigation system errors
 - RNP leg types
 - RNP leg transitions

- RNP navigation authorisation requirements
- GNSS receiver requirements for RNP APCH operations
- GNSS receiver mode conditions and actions for RNP APCH
- RNP instrument approach requirements
- augmented and non-augmented approaches
- interpret IAP charts for minima information and operational restrictions
- validity and accuracy of altimeter subscale setting to obtain elevation or altitude (QNH) or RNP APCH types
- RNP approach differentiation
- space-based augmentation systems (SBAS)
- APV Baro-VNAV instrument approach charts
- vertical guidance information and operational considerations
- Baro-VNAV vertical guidance principles
- practical uses of critical points (CP)
- privileges and limitations conferred by an instrument rating
- reduced vertical separation minima (RVSM) operations, including:
 - range of flight levels within Australian airspace
 - operational requirements
 - aircraft altimeter accuracy requirements
 - vertical height tolerances
 - procedures and standard communication phraseology
 - altimetry system failures
- relevant WHS and environmental procedures and regulations
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders for IFR and planning requirements
- requirements for an alternate aerodrome
- use of a navigational computer.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIH0013 Plan a flight under instrument flight rules

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to plan a flight under instrument flight rules (IFR) in compliance with the relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes determining aircraft meets requirements for IFR flight, obtaining and using current operational documents, and preparing charts and flight plans for instrument meteorological conditions (IMC) flight. It also includes determining operational requirements, making flight notifications and programming navigation systems.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to route planning and navigation duties of flight crew and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

H – Route Planning and Navigation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Determine aircraft meets requirements for IFR flight	<p>1.1 Aircraft requirements for IFR flight are determined</p> <p>1.2 Flight and navigation instruments, minimum electrical lighting, navigation equipment and any other requirements fitted to aircraft are checked to ensure they are suitable and acceptable for IFR flight</p>
2 Obtain and use current operational documents	<p>2.1 Operational documents applicable to flight are obtained and checked for currency</p> <p>2.2 Applicable information contained in documents for flight planning and management is interpreted and applied</p> <p>2.3 Documents required for flight are stowed and their accessibility for pilot during flight is ensured</p>
3 Prepare charts and flight plan for IMC flight	<p>3.1 Charts suitable for intended IFR flight are selected and prepared</p> <p>3.2 Applicable information to prepare a flight plan that details tracks, distances, times, altitudes to be flown and fuel requirements to reach destination are obtained, analysed and applied</p> <p>3.3 Meteorological, airways facilities, aerodrome and Notice to Airmen (NOTAM) information applicable to planning and conducting a flight is obtained, interpreted and applied</p> <p>3.4 Routes to optimise options in an engine failure are planned</p>
4 Determine operational requirements	<p>4.1 Suitability of aerodrome for instrument flight operations is determined</p> <p>4.2 Curfew requirements are complied with</p> <p>4.3 Duration of flight is determined</p> <p>4.4 Holding, alternate and reserve fuel requirements due to weather, navigation aid availability and aerodrome lighting are determined in accordance with operational requirements</p>

- | | | |
|------------------------------------|------------|--|
| | 4.5 | Total fuel requirements are calculated |
| 5 Make flight notification | 5.1 | Flight notification is prepared for planned IFR flight |
| | 5.2 | Completed flight notification is submitted |
| | 5.3 | Flight notification acceptance is confirmed |
| 6 Program navigation system | 6.1 | Data for transfer to approved airborne navigation system is prepared |
| | 6.2 | Navigation data is loaded and checked |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIH0005 Plan a flight under instrument flight rules.

Assessment Requirements for AVIH0013 Plan a flight under instrument flight rules

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying altimetry procedures to all stages of an instrument flight
- applying published instrument flight rules (IFR) procedures
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant aeronautical knowledge
- applying relevant legislation and workplace procedures
- calculating fuel requirements
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting IFR charts
- interpreting instrument meteorological conditions (IMC) forecasts
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- selecting suitable navigation aids/systems
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aerodrome and en route holding procedures
- aircraft fuel planning, including holding, alternate, fixed reserve and usage rates
- aircraft transponder operation
- airspace requirements and procedures under IFR conditions
- Civil Aviation Safety Regulation (CASR) Part 61 Manual of Standards Schedule 3 Aeronautical Knowledge relevant to instrument flight operations
- continuous descent final approach (CDFA) techniques
- critical point (CP) and point of no return (PNR)
- how to determine currency of operational documents
- factors affecting en route performance, range and endurance
- general operational information relevant to commercial pilots, including:
 - privileges and limitations
 - documentation
 - procedures, radio telephony and charts
 - meteorology
 - operational planning requirements
- ground and space navigation systems and infrastructure, including:
 - principles of operation, indications and limitations of ground-based navigation aids
 - rated coverage of radio navigation aids considering aircraft location, altitude and time of day
 - pilot navigation tolerances
 - non-directional beacons (NDB) lateral azimuth guidance
 - very high frequency (VHF) omni-directional radio range (VOR)
 - distance measuring equipment (DME)
 - instrument landing system (ILS)/localiser (LOC)
 - global navigation satellite system (GNSS), including:
 - operating procedure errors
 - mode selection
 - data entry
 - data validation and checking, including independent cross-checking procedures
 - automation induced complacency
 - non-standardisation of GNSS receiver units
 - human information processing
 - situational awareness
- human factors relevant to commercial pilots, including:
 - physiological factors:
 - vestibular system

- vestibular disorientation
- somatogravic/somatogyral illusions
- visual illusions
- icing conditions and hazards
- IFR cruising levels, selection and hazards
- IFR route planning requirements
- in an Australian Defence Force (ADF) context, relevant Defence Orders and Instructions
- instrument flight documentation requirements
- instrument flight procedures, including:
 - flight instrument operations, errors and limitations
 - radio communication phraseology
 - lost communications procedures
 - air traffic service requirements
 - instrument chart symbology and information
 - reporting requirements
 - 2D/3D instrument approach operations
 - pilot responsibilities
 - altimeter accuracy and variations due temperature
 - flight plan validity
 - search and rescue time (SARTIME) and pilot obligations
 - missed approach requirements
 - alternate aerodrome weather minima
 - aircraft separation standards
- lowest safe altitude (LSALT), including:
 - calculate route LSALT not specified in aeronautical information publications (AIP)
 - missed approach minimum obstacle clearance
 - minimum obstacle clearance provided by minimum circling altitude
 - track establishment after take-off
 - establish aircraft above LSALT requirements
 - descent below LSALT or minimum safety altitude requirements by day/night/night-visual flight rules (NVFR)
- limitations on use of radar on ground
- meteorological considerations for an IFR flight, including:
 - weather phenomena:
 - frontal weather
 - tropical cyclones
 - dust devils
 - thunderstorms
 - jet streams
 - fog

- meteorological information requirements
- interpreting forecasts to determine operational requirements
- air temperature lapse rates
- predicting probability of meteorological conditions, including:
 - airframe icing
 - hail
 - micro bursts and wind shear
 - turbulence, including clear air turbulence (CAT)
- weather information services
- pilot reporting obligations
- altimeter subscale setting to obtain elevation or altitude (QNH) sources required for IFR operations
- meteorological minimas
- navigation requirements, including:
 - position fixing requirements
 - aircraft performance categories and operational implications
 - waypoints, symbology and pilot requirements:
 - initial approach fix
 - final approach fix
 - visual circling by day or night
 - pressure error correction (PEC)
 - aerodrome operating minima (AOM)
 - decision altitude (DA)
 - normal segment gradient
 - tracking tolerances:
 - controlled area (CTA) avoidance
 - ground-based navigation aids
 - navigation aids not available
 - notification requirements
 - order of precision of navigation aids/systems
 - speed limitations and restrictions:
 - operations below 10,000 feet above mean sea level (AMSL)
 - during holding procedures
 - during approach procedures
 - issued by air traffic services (ATS) and when cancelled
- NVFR operational requirements
- operational planning requirements, including:
 - flight planning:
 - route limitations
 - aircraft performance

- forecast freezing levels
- cruising altitude/level performance tables
- required navigation performance (RNP) requirements
- alternate aerodrome requirements:
 - weather
 - navigation aids
 - approach procedures
 - lighting
 - availability of weather reports
 - divert time
- holding fuel requirements
- performance based navigation (PBN), including:
 - basic PBN principles, including area navigation (RNAV) and required navigation performance (RNP) capabilities
 - core components
 - navigation system performance requirements
 - performance monitoring and alerting
 - RNP specifications and system requirements
 - RNP navigation system errors
 - RNP leg types
 - RNP leg transitions
 - RNP navigation authorisation requirements
 - GNSS receiver requirements for RNP APCH operations
 - GNSS receiver mode conditions and actions for RNP APCH
 - RNP instrument approach requirements
 - augmented and non-augmented approaches
 - interpret IAP charts for minima information and operational restrictions
 - validity and accuracy of QNH for RNP APCH types
 - RNP approach differentiation
 - space-based augmentation systems (SBAS)
 - Approved barometric Vertical Navigation (APV Baro-VNAV) instrument approach charts
 - vertical guidance information and operational considerations
 - Baro-VNAV vertical guidance principles
- pilot activated lighting (PAL)
- pilot responsibilities, including:
 - standard instrument departure (SID)
 - standard terminal arrival route (STAR)
 - noise abatement
 - missed approach

- holding pattern and entry
- planned/alternate destination weather conditions below minima
- privileges and limitations conferred by an instrument rating
- receiver autonomous integrity monitoring (RAIM) prediction implications
- reduced vertical separation minima (RVSM) operations, including:
 - range of flight levels within Australian airspace
 - operational requirements
 - aircraft altimeter accuracy requirements
 - vertical height tolerances
 - procedures and standard communication phraseology
 - altimetry system failures
- relevant WHS and environmental procedures and regulations
- relevant sections of CASRs and Civil Aviation Orders for IFR and planning requirements
- requirements for an alternate aerodrome
- runway visual approach slope lighting system operation and limitations
- use of a navigational computer.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIH0014 Navigate aircraft under visual flight rules

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to navigate an aircraft under visual flight rules (VFR) in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes preparing navigation documents and flight plan, complying with airspace procedures and conducting departure procedures. It also includes navigating aircraft en route, navigating at low level and in reduced visibility, and performing lost procedures. It also includes performing diversion procedures, using instrument navigation systems and executing arrival procedures.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to route planning and navigation duties of flight crew and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

H – Route Planning and Navigation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare navigation documents and flight plan

- 1.1 Suitable navigation charts for intended flight are selected and prepared
- 1.2 Applicable information is obtained, analysed and applied to produce a flight plan that details tracks, distances, times and fuel requirements to reach a destination
- 1.3 Pre-flight planning is used to minimise in-flight navigational work load
- 1.4 Applicable VFR are applied to current and forecast operating conditions to determine whether planned flight can proceed
- 1.5 Hazards to navigation are marked on charts as required

2 Comply with airspace procedures

- 2.1 Applicable flight airspace restrictions and dimensions are identified
- 2.2 Air traffic clearances are obtained and compliance with them is maintained
- 2.3 Traffic, terrain and airspace separation criteria is maintained in accordance with VFR

3 Conduct departure procedures

- 3.1 Pre-flight planning and cockpit organisation are conducted to ensure charts, documentation and navigational equipment are accessible from the control seat
- 3.2 Departure administration and communication is conducted
- 3.3 Track is intercepted within five nautical miles (nm) of airfield and departure time is recorded or alternative procedures are applied as required
- 3.4 Orientation is always maintained
- 3.5 Priority is given to controlling aircraft before conducting navigation administration or communication
- 3.6 Lookout is maintained using a systematic scan technique at a rate determined by traffic density, visibility and

- terrain
- 3.7** Local and published noise abatement requirements and curfews are observed
- 4** **Navigate aircraft en route**
- 4.1** Planned route is maintained in accordance with VFR
- 4.2** In-flight documentation and communication is completed
- 4.3** Waypoint and/or destination estimated time of arrival (ETA) are checked and revised as required
- 4.4** Search and rescue times (SARTIME) awareness is maintained and revised based on destination ETA calculations
- 4.5** Fuel consumption is monitored and reserves revised
- 4.6** Pre-descent or navigation turning point checks are executed
- 4.7** Appropriate techniques to obtain a positive navigation fix at suitable intervals are used
- 4.8** Route, en route terrain, en route and destination weather awareness is maintained and appropriate courses of action are implemented in accordance with changing weather conditions
- 4.9** Lookout is maintained using a systematic scan technique at a rate determined by traffic density, visibility and terrain
- 4.10** Aircraft is configured as required for turbulent, holding and maximum aircraft range based on environmental and operational conditions
- 4.11** Aircraft systems, fuel and engine warnings, cautions and indicators are monitored to ensure aircraft is operated to achieve flight plan objectives
- 5** **Navigate at low level and in reduced visibility**
- 5.1** Compliance with VFR is maintained during navigation at low level or in reduced visibility
- 5.2** Pre-descent and/or navigation turning point checks are executed in accordance with regulatory requirements
- 5.3** Planned route is maintained in accordance with

regulatory requirements and procedures

- 5.4** In-flight documentation is completed
 - 5.5** Waypoint and/or destination ETA are checked and revised as required
 - 5.6** Aircraft is operated and configured to maintain minimum height above ground level (AGL) and terrain separation and remaining within visual meteorological conditions (VMC)
 - 5.7** Route, en route terrain, en route and destination weather awareness is maintained and appropriate courses of action are implemented in accordance with changing weather conditions
 - 5.8** Lookout is maintained using a systematic scan technique at a rate determined by traffic density, visibility and terrain
 - 5.9** Hazards and threats to low flying navigation are identified and risk controls are implemented
 - 5.10** Effects of wind velocity, false horizons, rising ground, adverse environmental conditions and mountainous terrain are managed, and contingency actions are planned as required
 - 5.11** Aircraft is configured as required for reduced visibility and low cloud base environmental and operational conditions
 - 5.12** Situational awareness is maintained at all times
- 6 Perform lost procedure**
- 6.1** Positional uncertainty is identified and recognised
 - 6.2** Position is fixed and new track to destination attainable within limits of fuel and daylight is determined using recognised methods
 - 6.3** Track to destination is re-established or replanned with consideration of fuel usage and reserves
 - 6.4** Waypoint and/or destination ETA are checked and revised as required
 - 6.5** Radio, navigation aids, transponder and air traffic control (ATC) services are used for assistance

- 6.6** A timely precautionary search and landing is planned for possible circumstances of being lost or having no fuel or no light
- 7 Perform diversion procedure**
- 7.1** Requirement to perform diversion procedure is identified and a timely decision is made
- 7.2** Alternate acceptable aerodrome/destination is identified
- 7.3** New route is determined and established
- 7.4** Waypoint and/or destination ETA are checked and revised as required
- 7.5** Flight plan is revised considering operational information, weather, terrain, airspace and fuel available
- 7.6** Air traffic service is advised of action where possible and compliance with airspace procedures is maintained
- 7.7** SARTIME awareness is maintained and revised based on diversion destination ETA calculations and is cancelled on arrival
- 8 Use instrument navigation systems**
- 8.1** Navigation systems are initialised and system validity checks are conducted as required
- 8.2** Receiver autonomous integrity monitoring (RAIM) checks are conducted as required
- 8.3** Navigation aids and systems are utilised to confirm position, track and navigation information
- 8.4** Flight plan is selected, loaded, checked and activated in aircraft navigation system
- 8.5** Navigation systems are operated in accordance with operating instructions and procedures
- 8.6** ATC radar is used for position information and tracking assistance as required
- 8.7** Waypoints and position fixes are confirmed using instrument navigation systems
- 8.8** Integrity of navigation aid/systems information is monitored and maintained
- 9 Execute arrival**
- 9.1** Arrival aerodrome, meteorological conditions and local traffic information is obtained and applied to arrival

procedures

procedure plan

- 9.2 Radio communications are established and maintained
- 9.3 Aerodrome landing direction and arrival procedure suitability are determined
- 9.4 Descent point is calculated
- 9.5 Arrival and circuit procedures are conducted at destination aerodrome
- 9.6 Lookout is maintained during arrival procedure using a systematic scan technique at a rate determined by traffic density, visibility and terrain
- 9.7 Aerodrome markings, lights, signals and indicators are interpreted, applied and adhered to
- 9.8 Local and published noise abatement requirements and curfews are observed
- 9.9 SARTIME awareness is maintained and revised based on diversion destination ETA calculations and cancelled upon arrival

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIH4001 Navigate aircraft under visual flight rules.

Assessment Requirements for AVIH0014 Navigate aircraft under visual flight rules

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- adjusting aircraft performance to achieve desired timings
- applying air safety practices and regulations
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant aeronautical knowledge
- applying relevant legislation and workplace procedures
- calculating distance and rate of closure rates to/from ground features
- calculating fuel endurance
- carrying out dead reckoning (DR) navigation techniques
- communicating effectively with others
- completing relevant documentation
- determining dead reckoned position
- fixing aircraft position
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- maintaining compliance with regulatory requirements
- maintaining construction, communication and execution of a traffic deconfliction plan
- maintaining navigation logs
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- performing diversion procedure
- planning applicable altitudes/flight levels and tracking tolerances to avoid controlled airspace
- prioritising work load and flight navigation tasks
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs

- recognising significant variances from forecast meteorological conditions and taking appropriate actions, including issuing an air report (AIREP)
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance workplace procedures
- selecting and using appropriate navigational instrument systems and aids
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- sourcing and interpreting aviation weather forecast products and services appropriate to flight planning and navigation procedures
- working systematically with required attention to detail without injuring self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- air navigation techniques
- aircraft fuel usage rates
- allowances for changed visual aspects of ground features at low level
- arrival procedures within visual meteorological conditions (VMC)
- basic global navigation satellite system (GNSS) principles, including:
 - characteristics of different chart types
 - aeronautical information publication (AIP) visual charts
 - chart symbology
 - topographic details
 - scale representation
 - tracks, distances and rhumb lines
 - plotting positions:
 - latitude and longitude
 - bearing and distance
 - map projections
- chart reading techniques
- circuit and circuit joining procedures
- computations and conversions, including:
 - ground speed, distance and fuel usage
 - airspeed, air temperature and height
 - determine wind speed and velocity
 - rates/gradients of climb and descent
 - top of climb (TOPC) and top of descent (TOPD) calculations
- controlled airspace requirements
- critical point and point of no return

- DR navigation techniques
- departure procedures within VMC
- diversion considerations and procedures
- en route GNSS navigation principles
- en route navigation techniques
- factors affecting en route performance, range and endurance
- featureless terrain and extended over-water flight navigation techniques
- flight planning requirements
- identification by shape, dimensions, contrast and colour, and uniqueness of ground features
- identification of control area (CTA), control zone (CTR), and prohibited, restricted and danger areas
- in an Australian Defence Force (ADF) context, relevant Defence Orders and Instructions
- limitations of navigation aids/systems
- low level and reduced visibility navigation techniques
- maximum payload and minimum fuel operations
- pilot navigation principles, including:
 - map to ground
 - ground to map
 - position lines
 - ground feature selection
 - chart selection and preparation
 - track made good (TMG)
 - track drift
 - estimated time of arrival (ETA) calculation methods
- potential impacts of specific weather phenomena on aviation operations
- principles of operation of navigation aids and systems
- procedures for requesting clearances from and into controlled airspace
- radio navigation aids, including:
 - identification by frequency information
 - extracting aid information from publications
 - aggregating errors and scalloping
 - establishing position lines
 - station homing and station passage
 - establishing position fixes
- relevant WHS/OHS and environmental procedures and regulations
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders related to visual flight rule (VFR) navigation
- time definitions and application to air navigation, including:
 - local mean time
 - coordinated universal time (UTC)
 - local (standard) time

- local summer time
- zone conversion
- daylight time calculations
- traffic rules and procedures
- use of a navigational computer.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIH0015 Plan a flight under night visual flight rules

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to plan a flight under night visual flight rules (NVFR) in compliance with the relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes determining aircraft NVFR flight requirements, obtaining and using operational documents, preparing NVFR flight plans, making flight notifications and programming navigation systems.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to route planning and navigation duties of flight crew and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

H – Route Planning and Navigation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--|--|
| 1 Determine aircraft meets requirements for NVFR flight | <p>1.1 Aircraft requirements for NVFR flight are determined</p> <p>1.2 Flight and navigation instruments, minimum electrical lighting, navigation equipment and any other requirements fitted to aircraft are checked to ensure they are suitable and serviceable for NVFR flight</p> |
| 2 Obtain and use current operational documents | <p>2.1 Operational documents applicable to flight are obtained and checked for currency</p> <p>2.2 Applicable information contained in documents for flight planning and management is interpreted and applied</p> <p>2.3 Documents required for flight are stowed and their accessibility for pilot during flight is ensured</p> |
| 3 Prepare flight plan for NVFR flight | <p>3.1 Charts suitable for intended NVFR flight are selected and prepared</p> <p>3.2 Applicable information to prepare a flight plan that details tracks, distances, times, altitudes to be flown and fuel requirements to reach destination are obtained, analysed and applied</p> <p>3.3 Hazards are identified, risks are assessed and hazard management implemented</p> <p>3.4 Meteorological, airways facilities, aerodrome and Notice to Airmen (NOTAM) information applicable to planning and conducting a flight is obtained, interpreted and applied</p> <p>3.5 Routes to optimise options in engine failure are planned</p> |
| 4 Determine operational requirements | <p>4.1 Suitability of aerodrome lighting for night operations is determined</p> <p>4.2 Curfew requirements are complied with</p> <p>4.3 Duration of flight is determined</p> <p>4.4 Holding, alternate and reserve fuel requirements due to weather, navigation aid availability and aerodrome lighting are determined in accordance with operational</p> |

		requirements
	4.5	Total fuel requirements are calculated
5	Make flight notification	5.1 Flight notification is prepared for planned NVFR flight
		5.2 Completed flight notification is submitted
		5.3 Flight notification acceptance is confirmed
6	Program navigation system	6.1 Data is prepared for transfer to approved airborne navigation system
		6.2 Navigation data is loaded and checked

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIH4012 Plan a flight under night visual flight rules.

Assessment Requirements for AVIH0015 Plan a flight under night visual flight rules

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant aeronautical knowledge
- applying relevant legislation and workplace procedures
- calculating fuel requirements
- communicating effectively with others
- completing relevant documentation
- determining alternate aerodrome requirements and suitability for a night visual flight to a specified destination given relevant information, including Notice to Airmen (NOTAM)
- determining fuel quantity required for a night visual flight
- determining holding requirements due to weather, traffic or traffic advisory
- determining currency of operational documents
- determining meteorological forecasts required for a night visual flight
- determining whether a flight should proceed based on available meteorological forecasts
- extracting and applying relevant information from operational documents
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) and relevant regulations
- interpreting and following operational instructions and prioritising work
- interpreting meteorological forecasts
- interpreting navigation charts
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults and malfunctions promptly in accordance with

workplace procedures

- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- selecting suitable navigation aids/systems
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aerodrome and en route holding procedures
- aerodrome lighting and curfew requirements for night operations
- aircraft fuel planning, including holding, alternate, fixed reserve and usage rates
- airspace requirements and procedures under night visual flight rules (NVFR) conditions
- critical point (CTA) and point of no return (PNR)
- documents required to be carried on a night visual flight
- factors affecting en route performance, range and endurance
- icing conditions and hazards
- in an Australian Defence Force (ADF) aviation context, relevant Defence Orders and Instructions
- limit of NVFR operations in a single-engine aircraft
- limitations and errors of navigations aids/systems
- meteorological considerations for a NVFR flight
- NVFR and procedures
- NVFR cruising levels, selection and hazards
- NVFR route planning requirements
- pilot medical fitness and qualifications necessary for night visual flight
- privileges of NVFR rating
- procedures for flight plan amendments and revised estimates for a night visual flight
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders pertaining to NVFR and flight planning requirements
- relevant WHS and environmental procedures and regulations
- requirements for an alternate aerodrome
- requirements for in-flight progress reports
- requirements for submission of flight notification and search and rescue watch (SARWATCH)
- specification of aircraft electrical lighting, radio communication and navigation equipment required for night visual flight
- specification of aircraft flight instruments required for night visual flight
- speed restrictions for night visual flight
- use of a navigational computer

- validity of a given meteorological forecast for a night visual flight.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIH0016 Navigate aircraft under night visual flight rules

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to navigate an aircraft under night visual flight rules (NVFR) in compliance with the relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes selecting, operating and monitoring navigation aids and systems, navigating aircraft at night, conducting diversions to revised routes or alternate aerodromes at night, and making visual approaches and departures at night. It also includes complying with air traffic control (ATC) rules and procedures for NVFR flights, and managing hazardous weather conditions.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to route planning and navigation duties of flight crew and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

H – Route Planning and Navigation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Select, operate and monitor navigation aids/systems

1.1 Navigation aids and systems appropriate for planned NVFR flight are selected and operated

1.2 Ground-based and satellite-based navigational systems confidence and integrity checks are conducted, continuously monitored and maintained

2 Navigate aircraft at night

2.1 External aircraft, cockpit and instrument lighting are configured and adjusted to allow reference to documentation, instruments and lookout

2.2 Aircraft position fix is determined visually or with reference to navigation aid and systems using ground-based and/or satellite-based navigational systems

2.3 Tracks are intercepted to and from stations and waypoints visually or with reference to navigation aids and systems using ground-based and satellite-based navigational systems

2.4 Track is maintained within tolerances specified in published procedures

2.5 Timings and fuel usage rates are assessed, revised and recorded in navigation log

2.6 Situational awareness is maintained using a recognised navigation work cycle

2.7 Station passage is recognised

2.8 Global navigation satellite system (GNSS)/distance measuring equipment (DME) arc procedure is performed within tolerances specified in published procedures

2.9 Planned route above lowest safe altitude (LSALT) is maintained

2.10 Route and destination weather conditions are monitored and appropriate actions executed

2.11 Descent point calculations are completed

- | | | |
|---|------------|--|
| 3 Conduct a diversion to revised route or alternate aerodrome at night | 3.1 | Requirement for an unplanned diversion is recognised and confirmed |
| | 3.2 | Route to alternate aerodrome, navigation aid and /or revised track is determined |
| | 3.3 | Planned route height above LSALT is maintained |
| | 3.4 | Flight planned route is diverted to track to alternate aerodrome or navigation aid |
| | 3.5 | Operational information for alternate aerodrome/s is reviewed and applied in accordance with regulations and published procedures |
| | 3.6 | Fuel plan is reviewed and amended in accordance with regulations and published procedures |
| 4 Make visual departure at night | 4.1 | Obstacle clearance is maintained visually at all times during departure until reaching LSALT |
| | 4.2 | Departure track is intercepted within five nautical miles (nm) of aerodrome |
| | 4.3 | Take-off and departures are conducted from aerodromes remote from ground lighting using instruments as the primary reference and ensuring after take-off checks are performed at a safe height |
| 5 Make visual approach at night | 5.1 | Descent below LSALT is conducted in accordance with published procedures |
| | 5.2 | Track is maintained to destination aerodrome |
| 6 Comply with ATC rules and procedures for NVFR flights | 6.1 | Separation from other air traffic under NVFR is maintained |
| | 6.2 | Airspace requirements are complied with |
| | 6.3 | Two-way communication is maintained with air traffic services and other aircraft |
| | 6.4 | ATC clearances and/or radar vectoring instructions are complied with |
| 7 Manage hazardous weather conditions | 7.1 | Hazardous weather conditions are identified and risk management processes applied to maintain safety of |

flight

- 7.2 Hazardous weather avoidance procedures are applied
- 7.3 Aircraft systems are employed to mitigate the effects of hazardous weather

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIH4013 Navigate remote pilot aircraft systems.

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIH0016 Navigate aircraft under night visual flight rules

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying air safety practices and regulations
- applying altimetry procedures to all stages of a night visual flight
- applying operational requirements that apply to planning a flight on the basis of conducting an area navigation (RNAV) global navigation satellite system (GNSS) procedure at the destination
- applying relevant aeronautical knowledge
- applying relevant legislation and workplace procedures
- calculating heading to steer to intercept a new or original track to or from a non-directional beacon (NDB)
- calculating heading to steer to intercept desired inbound track before reaching an NDB
- calculating lowest safe altitude (LSALT) for a night visual flight for a route published on a chart
- calculating LSALT when uncertain of position
- calculating relative bearing that will indicate a desired track to or from an NDB has been intercepted, given the intercept heading
- calculating the heading to steer to intercept a new or original track to or from a very high frequency (VHF) omni directional radio range (VOR)
- calculating track to and from an NDB given heading and relative bearings
- communicating effectively with others
- completing relevant documentation
- determining NDB station passage, abeam NDB station, NDB bearing the aircraft is on, track error and/or drift experienced, from an automatic direction finder (ADF) relative bearing indications
- determining off-track distance experienced from VOR and distance measuring equipment (DME) cockpit indications
- determining route for night visual flight with respect to:
 - forecast weather
 - controlled airspace, including prohibited, restricted and danger (PRD) areas

- specified route limitations
- airways operational requirements
- availability of published routes
- en route alternate aerodromes
- navigation aids
- rated coverage
- radio communication
- determining scalloping, VOR station passage, abeam VOR station, VOR radial the aircraft is on, track error and/or drift experienced, from VOR cockpit indications
- determining flight calculations, including:
 - time made good (TMG)
 - ground speed (GS)
 - estimated time of arrival (ETA)
 - time and distance to waypoint (WPT)
 - wind velocity (WV) in-flight
- determining whether a flight may proceed based on route, aircraft equipment and NVFR navigation requirements
- identifying and correctly using equipment required when navigating an aircraft under NVFR
- implementing contingency plans
- implementing work health and safety (WHS)/occupational health and safety (OHS) procedures and relevant regulations
- interpreting DME or global positioning system (GPS) arrival information
- interpreting typical GPS navigational displays latitude/longitude, distance and bearing to waypoint, course deviation indications (CDI)
- implementing aviation risk management processes to minimise, control or eliminate hazards that may exist while navigating an aircraft under NVFR
- maintaining compliance with regulatory requirements
- maintaining interception and maintenance of GNSS defined tracks
- managing abnormal operations and emergency procedures in control area (CTA), control zone (CTR), or Class G airspace and at non-controlled aerodromes
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- performing DME procedures, including:
 - fixing position, given cockpit instrument indications utilising two VHF VOR stations
 - fixing position, given instrument indications utilising combinations of VOR, - NDB and DME
 - fixing position, given relative bearing indications utilising two NDB stations
- performing NDB approaches, including:
 - calculating heading to steer to intercept a new or original track to or from an NDB
 - calculating heading to steer to intercept desired inbound track before reaching an NDB

- calculating relative bearing that will indicate desired track to or from an NDB has been intercepted, given the intercept heading
- calculating track to and from an NDB, given heading and relative bearings
- determining NDB station passage, abeam NDB station, NDB bearing the aircraft is on, tracking error and/or drift experienced, from automatic direction finder relative bearing indications
- fixing position, given relative bearing indications utilising two NDB stations
- performing GNSS procedures, including:
 - interpreting DME or GNSS arrival information
 - interpreting typical GNSS navigational displays, including latitude/longitude, distance and bearing to waypoint, CDI
- performing VHF VOR approaches, including:
 - calculating the heading to steer to intercept a new or original track to or from a VOR
 - determining off-track distance experienced from VOR and DME cockpit indications
 - determining scalloping, VOR station passage, abeam VOR station, VOR radial the aircraft is on, tracking error and/or drift experienced from VOR cockpit indications
 - fixing position, given cockpit instrument indications utilising two VOR stations
 - fixing position, given instrument indications utilising combinations of VOR, NDB and DME
- performing NVFR navigational functions within the parameters of authorised regulations, orders and operations manual procedures
- predicting availability of approach receiver autonomous integrity monitoring (RAIM) at destination or alternate aerodrome and limitations that apply to the prediction
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- recognising and taking appropriate action for GNSS warnings and messages
- recognising significant variances from forecast meteorological conditions and taking appropriate actions, including issuing an air report (AIREP)
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- sourcing and interpreting aviation weather forecast products and services appropriate to flight planning and navigation procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- abnormal operations and emergency procedures in CTA, CTR, Class G airspace and at non-controlled aerodromes

- aerodrome landing area (ALA) or helicopter landing site (HLS) dimension and lighting requirements for fixed or rotary wing NVFR operations
- aerodrome operations where surrounding light is limited
- airways clearance requirements for entering, operating in and departing CTA and CTR, including what details to provide to air traffic control (ATC), and what details to expect from ATC
- airways clearance requirements for operating in all classes of airspace, including lead time required for flight plan submission, contents, clearance void time and read back requirement
- alternate aerodrome planning requirements
- altimetry procedures to all stages of a night visual flight
- ATC procedures relevant to NVFR operations
- ATC requirements for a change of level in CTA, including in an emergency
- compulsory reporting points for route selected
- controlled area protection
- departure, climb, transition to cruise (levelling out), cruise, change of levels, descent and visual approach procedures at night, in CTA, CTR, Class G airspace and at non-controlled aerodromes
- dimensions of the significant safety sector when calculating LSALT for a route not published on a chart
- DME, including:
 - DME or GNSS arrival information
 - DME or GNSS arrival procedures and limitations in all classes of airspace
 - pilot responsibilities when DME or GNSS arrival is conducted outside controlled airspace
 - conditions permitting descent below LSALT
 - procedure for joining circuit using a DME or GNSS arrival
 - principles of operation of DME or GNSS radio equipment
 - procedures for handling loss of radio communication during a DME or GNSS arrival
- explanation of conditions for descent below LSALT
- GNSS, including:
 - principles of operation, performance limitations and errors of a GNSS system
 - methods of position fixing using a GNSS system
 - GNSS operating procedures for typical navigational tasks using a specific type of aircraft equipment
 - GNSS operating procedures that provide safeguards against navigational errors and loss of situational awareness
 - indications of waypoint passage
 - GNSS operational and serviceability checks
 - human factor limitations associated with using GNSS equipment
 - requirements applicable to pilots and equipment for GNSS operations
 - parameters applicable to tracking tolerances, automatic waypoint sequencing, CDI sensitivity and RAIM availability
 - mode of operation required during each segment of a GNSS/NPA, conditions required to

transition to and operate in that mode, and associated CDI sensitivity and RAIM protection provided

- parameters applicable to RAIM warnings in en route, terminal and approach modes
- effect of availability or otherwise of baro-aiding on RAIM availability and prediction
- effect of satellite unavailability on reliability of each type of prediction
- effect of each type of RAIM prediction operational requirements
- operational requirements that apply to planning a flight on the basis of conducting an area navigation RNAV (GNSS) procedure at the destination
- factors that may adversely affect the conduct of a GNSS/NPA and suitable pilot procedures to minimise such effects
- operating procedures for GNSS equipment that reduce or eliminate errors due to any of these factors
- human factors and physiological limitations for conducting NVFR operations
- loss of radio communication procedures in CTA, CTR, Class G airspace and at non-controlled aerodromes
- maximum permissible time interval in between ATC transmissions during radar vectoring
- methods of establishing and calculating LSALT, including:
 - from published charts
 - for route not published
 - position uncertainty
- minimum NVFR aircraft equipment requirements
- navigation requirements for a night visual flight using radio, self-contained or long-range navigation systems
- navigation requirements for a night visual flight using visual reference to ground and water
- navigation requirements for night visual flight with respect to time interval between fixes, accuracy of time reference, and accuracy and procedures in track-keeping
- navigation route requirements for NVFR:
 - forecast weather
 - CTA
 - PRD
 - engine out performance for multi-engine aircraft
 - specified route limitations
 - airways operational requirements
 - availability of published routes
 - en route
 - alternate aerodromes
 - navigation aids
 - rated coverage
 - radio communication
- navigation tolerance for a night visual flight avoiding CTA
- NDB, including:

- effects of coastal refraction, night error, thunderstorms, mountainous areas, types of terrain and altitude of aircraft on NDB indications or range
- methods of selecting and using the most appropriate NDB for tracking during navigation
- NDB position fixing, tracking techniques, procedures and limitations
- operation of VHF aerodrome lighting pilot activated lighting (PAL)
- pre-flight altimeter accuracy check for a night visual flight
- principles of operations, limitations and errors for NVFR radio navigation systems
- privileges and limitations of NVFR rating
- procedures of night visual flight in all classes of airspace when diverting from track due to navigation or weather
- radar emergency procedures, including loss of radio communication, radar failure, transponder emergency codes and aircraft emergencies
- radar services that are provided by ATC
- radar vectoring procedures, including radio procedures and phraseologies
- radio procedures in CTA, CTR, Class G airspace and at non-controlled aerodromes
- requirements and procedure for a diversion to an alternate aerodrome
- requirements for departure and descent for clearance from terrain
- requirements for positive radio fixing and the most precise track guidance
- separation provisions between NVFR flights, and IFR and VFR flights in the various classes of CTA
- separation provisions between NVFR flights, and instrument flight rules (IFR) and VFR flights in General Aviation Aerodrome Procedures (GAAP) CTR
- VHF VOR, including:
 - VOR instrument settings required to provide command indications when flying on given tracks both to and from the VOR
 - VOR tracking techniques, procedures and limitations.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment

- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIH0017 Navigate aircraft under instrument flight rules

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to navigate an aircraft under instrument flight rules (IFR) in compliance with the relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes selecting, operating and monitoring navigation aids and systems, navigating aircraft in instrument meteorological conditions (IMC), and conducting a diversion to revised routes or alternate aerodromes. It also includes conducting holding patterns within IMC, complying with air traffic control (ATC) rules and procedures for IFR, managing hazardous weather operating conditions, and demonstrating turbulence penetration techniques.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to route planning and navigation duties of flight crew and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

H – Route Planning and Navigation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Select, operate and monitor navigation aids/systems

1.1 Navigation aids and systems appropriate for planned IFR flight are selected and operated

1.2 Ground-based and satellite-based navigational systems confidence and integrity checks are conducted, continuously monitored and maintained

2 Navigate aircraft in IMC

2.1 Aircraft position fix is determined with reference to navigation aid and systems using ground-based and/or satellite-based navigational systems

2.2 Tracks are intercepted to and from stations and waypoints with reference to navigation aids and systems, using ground-based and satellite-based navigational systems

2.3 Track is maintained within tolerances specified in authorised publications

2.4 Timings are recorded, assessed and revised as required

2.5 Station passage is recognised

2.6 Global navigation satellite system (GNSS)/distance measuring equipment (DME) arc procedure is performed within tolerances specified in authorised publications

2.7 Planned route above lowest safe altitude (LSALT) is maintained in accordance with IFR

2.8 IMC to visual flight transition is performed before descending below the lesser of LSALT or minimum safety altitude (MSA)

2.9 Route and destination weather conditions are monitored and appropriate actions executed

2.10 Descent point calculations are completed

3 Conduct a diversion to revised route or alternate

3.1 Requirement for an unplanned diversion is recognised and confirmed

aerodrome

- 3.2 Route to alternate aerodrome, navigation aid and/or revised track is determined
- 3.3 Planned route height is maintained above LSALT
- 3.4 Flight planned route is diverted to track to alternate aerodrome or navigation aid
- 3.5 Operational information for alternate aerodrome/s is reviewed and applied in accordance with regulations and published procedures
- 3.6 Fuel plan is reviewed and amended in accordance with regulations and published procedures
- 4 **Conduct holding pattern in IMC**
 - 4.1 Holding pattern is entered at or above LSALT/MSA appropriate to inbound heading using authorised sector entry procedures
 - 4.2 Published holding pattern is flown not below the specified minimum altitude, allowing for wind effect and turning inbound on prescribed track
 - 4.3 Holding pattern is departed in accordance with ATC instructions
- 5 **Comply with ATC rules and procedures for IFR flights**
 - 5.1 Separation from other air traffic in actual or simulated IMC is maintained
 - 5.2 Airspace requirements are complied with utilising IFR procedures
 - 5.3 Two-way communication is maintained with air traffic services (ATS) and other aircraft in accordance with IFR procedures
 - 5.4 ATC clearances and/or radar vectoring instructions are complied with
- 6 **Manage hazardous weather conditions**
 - 6.1 Hazardous weather conditions are identified and risk management processes applied to maintain flight safety
 - 6.2 Hazardous weather penetration procedures are implemented
 - 6.3 Aircraft systems are employed to mitigate effects of hazardous weather

- | | |
|--|--|
| 7 Apply turbulence penetration techniques | 7.1 Aircraft is configured to comply with turbulence penetration procedures |
| | 7.2 Passenger and crew are restrained during periods of predicted and actual turbulent conditions |
| | 7.3 Procedures for penetrating turbulence are applied to maintain flight safety |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIH5017 Navigate aircraft under instrument flight rules.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIH0017 Navigate aircraft under instrument flight rules

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying air safety practices and regulations
- applying altimetry procedures to all stages of an instrument flight
- applying operational requirements that apply to planning a flight on the basis of conducting an area navigation (RNAV) global navigation satellite system (GNSS) procedure at the destination
- applying relevant aeronautical knowledge
- applying turbulence penetration techniques
- communicating effectively with others
- completing relevant documentation
- determining time made good (TMG), ground speed (GS), estimated time of arrival (ETA), time and distance to waypoint (WPT), and wind velocity (WV) in flight
- identifying and correctly using equipment required when navigating an aircraft under instrument flight rules (IFR)
- implementing aviation risk management processes to minimise, control or eliminate identified hazards
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting typical GNSS navigational displays, including latitude/longitude (lat/long), distance and bearing to waypoint, and course deviation indications (CDI)
- maintaining interception and maintenance of GNSS defined tracks
- modifying activities depending on workplace contingencies, situations and environments
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- performing non-directional beacon (NDB) approaches, including:
 - calculating heading to steer to intercept a new or original track to or from an NDB
 - calculating heading to steer to intercept desired inbound track before reaching an NDB
 - calculating relative bearing that will indicate desired track to or from an NDB has been intercepted given the intercept heading

- calculating track to and from an NDB, given heading and relative bearings
- determining NDB station passage, abeam NDB station, NDB bearing the aircraft is on, tracking error and/or drift experienced from automatic direction finder relative bearing indications
- fixing position, given relative bearing indications utilising two NDB stations
- performing very high frequency (VHF) omni directional radio range (VOR) approaches, including:
 - calculating heading to steer to intercept a new or original track to or from a VOR
 - determining off-track distance experienced from VOR and DME cockpit indications
 - determining scalloping, VOR station passage, abeam VOR station, VOR radial the aircraft is on, tracking error and/or drift experienced from VOR cockpit indications
 - fixing position, given cockpit instrument indications utilising two VOR stations
 - fixing position, given instrument indications utilising combinations of VOR, NDB and DME
- performing IFR navigational functions within the parameters of authorised regulations, orders and operations manual procedures
- predicting availability of approach receiver autonomous integrity monitoring (RAIM) at destination or alternate aerodrome and limitations that apply to the prediction
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- recognising and taking appropriate action for GNSS warnings
- recognising significant variances from forecast meteorological conditions and taking appropriate actions, including issuing an air report (AIREP) and messages
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- sourcing and interpreting aviation weather forecast products and services appropriate to flight planning and navigation procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- air traffic control (ATC) rules and procedures, including:
 - abnormal operations and/or emergency procedures in control area (CTA), control zone (CTR), Class G airspace and at non-controlled aerodromes
 - airways clearance requirements for entering, operating in and departing CTA and CTR, including what details to provide to ATC, and what details to expect from ATC
 - airways clearance requirements for operating in all classes of airspace, including lead

time required for flight plan submission, contents, clearance void time, and read back requirement

- ATC requirements for a change of level in CTA, including in an emergency
- CTA protection
- departure, climb, transition to cruise (levelling out), cruise, change of levels, descent and visual approach procedures, day and night, in CTA and CTR
- departure, climb, transition to cruise (levelling out), cruise, change of levels, descent, and arrival procedures in Class G airspace and at non-controlled aerodromes
- loss of radio communication procedures in CTA, CTR, Class G airspace and at non-controlled aerodromes
- maximum permissible time interval between ATC transmissions during radar vectoring
- radar emergency procedures, including loss of radio communication, radar failure, transponder emergency codes and aircraft emergencies
- radar services that are provided by ATC
- radar vectoring procedures, including radio procedures and phraseologies
- radio procedures in CTA, CTR, Class G airspace and at non-controlled aerodromes
- requirements and procedure for a diversion to an alternate aerodrome
- separation provisions between IFR flights, and IFR and visual flight rule (VFR) flights in the various classes of CTA
- separation provisions between IFR flights, and IFR and VFR flights in General Aviation Aerodrome Procedures (GAAP) CTR
- visual approach procedures, day and night, in Class G airspace and at non-controlled aerodromes, including landing manoeuvres, cancellation of search and rescue watch (SARWATCH), and operation of VHF aerodrome pilot activated lighting (PAL)
- GNSS, including:
 - effect of availability or otherwise of baro-aiding on RAIM availability and prediction
 - effect of each type of RAIM prediction operational requirements
 - effect of satellite unserviceability on the reliability of each type of prediction
 - factors that may adversely affect the conduct of a global navigation satellite system non-precision approach GNSS/NPA and explain suitable pilot procedures to minimise such effects
 - GNSS operating procedures for typical navigational tasks using a specific type of aircraft equipment
 - GNSS operating procedures that provide safeguards against navigational errors and loss of situational awareness
 - GNSS operational and serviceability checks
 - human factor limitations associated with using GNSS equipment
 - indications of waypoint passage
 - methods of position fixing using a GNSS system
 - mode of operation required during each segment of a GNSS/NPA, conditions required to transition to and operate in that mode, and associated CDI sensitivity and RAIM protection provided

- operating procedures for GNSS equipment that reduce or eliminate errors due to any of these factors
- operational requirements that apply to planning a flight on the basis of conducting an area navigation global navigation satellite system RNAV (GNSS) procedure at the destination
- parameters applicable to RAIM warnings in the en route, terminal and approach modes
- parameters applicable to tracking tolerances, automatic waypoint sequencing, CDI sensitivity and RAIM availability
- principles of operation, performance limitations and errors of a GNSS system
- requirements applicable to pilots and equipment for GNSS operations
- NDB, including:
 - effects of coastal refraction, night error, thunderstorms, mountainous areas, types of terrain and altitude of aircraft on NDB indications or range
 - methods of selecting and using most appropriate NDB for tracking during navigation
 - NDB tracking techniques, procedures and limitations
 - procedures for sector entry and holding using NDB
- VOR, including:
 - procedures for sector entry and holding using VOR
 - VOR instrument settings required to provide command indications when flying on given tracks both to and from VOR
 - VOR tracking techniques, procedures and limitations.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVII0003 Advise on major services and attractions at aviation destinations

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to advise on major services and attractions at aviation destinations.

It includes researching information about airline destinations and responding to requests for information about airline destinations.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to customer service duties of ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

No licensing, legislative, regulatory or certification requirements are applicable to this unit at time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

I – Customer Service

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Research information about airline destinations

- 1.1** Appropriate sources of information about airline destinations for relevant routes are identified
- 1.2** Reference material is accessed from identified sources and organised in a form suitable for use when responding to passenger requests on aspects of airline destinations in accordance with customer expectations
- 1.3** Appropriate persons are consulted for advice and assistance in researching information about airline destinations

2 Respond to requests for information about airline destinations

- 2.1** Requests for information about airline destinations are courteously received and interpreted
- 2.2** Accurate, current and relevant information about airline destinations is provided at a level and depth appropriate to passenger needs
- 2.3** Where a response cannot be immediately provided to passenger requests, assistance and advice is sought from appropriate airline personnel or passenger is courteously referred to appropriate sources where they may be able to obtain the required information
- 2.4** Information is presented in a manner that shows sensitivity to both host and visiting cultures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVII0001 Advise on major services and attractions at aviation destinations.

Assessment Requirements for AVII0003 Advise on major services and attractions at aviation destinations

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others when advising on major services and attractions at aviation destinations
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include

knowledge of:

- airline procedures and standards for responding to requests from passengers for information about aspects of airline destinations
- information passengers may request about airline destinations, including:
 - accommodation options
 - culture
 - currency and exchange rates
 - customs and immigration requirements
 - economy
 - education
 - food
 - general lifestyle and customs
 - geographic features
 - government and politics
 - history
 - major tourist areas
 - natural history
 - public holidays
 - shopping
 - sports
 - tipping
- transport principles of customer service
- problems that may occur when responding to passenger requests for information on aspects of airline destinations and appropriate action that should be taken in each case
- relevant information about aspects of airline destinations on specific routes
- relevant WHS/OHS, hygiene and environmental procedures and regulations
- sources of information about airline destinations on specific routes, and ways and means of accessing information from those sources, including:
 - airline product information
 - appropriate websites
 - authoritative encyclopaedias and other relevant references
 - authoritative travel books and journals dealing with specific countries and locations
 - government tourism offices at destination points
 - information provided by diplomatic embassies and consulates
 - tourism brochures
 - tourist information bureaus and agents at destination points
 - travel agents.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVII0004 Provide quality customer service

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to provide quality customer service in compliance with relevant regulatory requirements of national operating standards.

It includes identifying and assessing customer needs and expectations, delivering high quality service and dealing with difficult customer situations.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to customer service duties of flight and ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

I – Customer Service

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Identify and assess customer needs and expectations

1.1 Different types of customers are accurately identified according to age, personality and cultural background

1.2 Individual customer needs and expectations are correctly identified, and products and services appropriate to identified needs and expectations are provided

2 Deliver high quality service

2.1 Customers are greeted in a polite and friendly manner

2.2 Trust, goodwill and satisfaction are developed through effective communication strategies

2.3 Customer requests are met whenever possible and within reasonable limits

2.4 Customer service is delivered in a manner appropriate to customer cultural and/or religious backgrounds

2.5 Customer dissatisfaction is recognised and appropriate action taken to resolve the problem

2.6 Potential problems are anticipated and action taken to minimise the effect on customer satisfaction

2.7 Opportunities to enhance the delivery of quality customer service are identified and actions, such as offers of assistance, building rapport, and intuitive identification of unstated customer needs, are implemented

2.8 Appropriate non-verbal communication is used to deliver quality service outcomes

3 Deal with difficult customer situations

3.1 Customer complaints are handled sensitively, courteously and discretely in accordance with workplace procedures and in a manner appropriate to the customer's cultural background

3.2 Nature and details of customer complaints are established and agreed on

3.3 Action to resolve customer complaint to customer's satisfaction is taken whenever possible and within level of own responsibility

- 3.4 Unresolved customer complaints are referred to a higher authority
- 3.5 All associated documentation is accurately and legibly completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVII0002 Provide quality customer service.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVII0004 Provide quality customer service

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- using the correct techniques to resolve customer complaints in accordance with workplace procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include

knowledge of:

- airline standards, principles and philosophies for providing quality customer service to passengers
- customers, including:
 - customers with a range of cultural and religious backgrounds
 - customers with a range of disabilities, including hearing or sight impairment
 - customers with babies or small children
 - customers with specific dietary and other needs
 - elderly customers
 - internal and external customers
 - non-English speaking customers
 - passengers
 - unaccompanied minors
- airline structure, products, services, policies and procedures
- cabin features and amenities for various types of aircraft
- complaint handling procedures
- customer service records/documentation
- features, amenities and departure gate locations of terminals at designated airports
- importance of customer service to airline and to individual crew responsibility
- needs and expectations of different types of customers, including internal and external customers
- problems that may occur when providing customer service to passengers on aircraft flights and appropriate action that should be taken in each case
- relevant customs, quarantine, equal opportunity and anti-discrimination regulations
- relevant WHS regulations
- risks that exist when providing customer service to passengers on aircraft flights, and related risk control procedures and precautions.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVII0005 Provide customer service on an aircraft

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to provide customer service to passengers on an aircraft.

It includes providing customer service prior to departure, advising on and using cabin features and amenities, and providing customer service during flight. It also includes providing customer service on arrival, providing support to other members of the aircraft crew, and carrying out administrative procedures.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to customer service duties of flight crew and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

No licensing, legislative, regulatory or certification requirements are applicable to this unit at time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

I – Customer Service

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Provide customer service prior to departure

- 1.1** Passengers are met and welcomed on boarding aircraft in accordance with regulatory requirements and workplace procedures
- 1.2** Hazards are identified, risks are assessed and hazard management implemented
- 1.3** Boarding passes are checked to confirm correct flight and seating, and passengers are directed to their seat locations in accordance with regulatory requirements and workplace procedures
- 1.4** Carry-on baggage is monitored to ensure it does not exceed allowable limits, and appropriate action is taken to remove baggage that exceeds these limits to hold stowage
- 1.5** Passengers are assisted to stow cabin baggage and personal items in accordance with regulatory requirements
- 1.6** Action is taken to ensure passengers are promptly seated with their seat belts correctly fastened in accordance with regulatory requirements
- 1.7** Passengers with specific needs are appropriately assisted
- 1.8** Passengers sitting over the wings and passengers with specific needs are given individual briefings in accordance with regulatory requirements and workplace procedures
- 1.9** Appropriate responses are made to passenger queries and requests
- 1.10** Passenger pre-departure cabin service items are offered as appropriate
- 1.11** Customer service is suspended during aircraft take-off

2 Advise on and use cabin features and amenities

- 2.1** Passengers are advised about relevant features and amenities available, including those available for passengers with specific needs
- 2.2** Cabin equipment and amenities are used in accordance with regulatory requirements and workplace procedures

- 2.3** Cabin equipment and amenities are correctly stowed after use in accordance with regulatory requirements and workplace procedures
- 3 Provide customer service during flight**
- 3.1** Toilets and facilities are periodically checked and serviced to ensure they meet workplace standards and are adequately stocked with relevant resources
- 3.2** Passenger safety, security and comfort needs are anticipated and appropriate action taken and responses are made
- 3.3** Aircraft cabin is patrolled to confirm passenger safety and comfort needs are being adequately satisfied in accordance with regulatory requirements and workplace procedures
- 4 Provide customer service on arrival**
- 4.1** Passengers are assisted in accessing baggage and personal items as required
- 4.2** Advice is provided on local time and weather conditions as required
- 4.3** Appropriate information is provided about terminal facilities and transport options
- 4.4** Passengers with specific needs are assisted as required in accordance with workplace procedures and regulatory requirements
- 4.5** Passengers are farewelled courteously in accordance with workplace procedures
- 4.6** Passengers are guided to appropriate exit
- 5 Provide support to other members of aircraft crew**
- 5.1** Appropriate assistance is provided to other cabin crew team members in accordance with workplace procedures
- 5.2** Other crew members are advised of variations to workplace procedures
- 5.3** Meals and refreshments are served to flight crew in accordance with workplace procedures and flight schedule
- 6 Carry out administrative procedures**
- 6.1** Workplace administrative procedures are identified and interpreted
- 6.2** Administrative procedures are implemented in

accordance with workplace and regulatory requirements

- 6.3** All required aircraft documentation/data capture is completed in accordance with workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVII2001 Provide customer service on an aircraft.

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required actions to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation during flight
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule on arrival
- operating electronic communications equipment to required protocol prior to departure
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- responding appropriately to individual differences in the workplace
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include

knowledge of:

- action to be taken in response to flight crew instructions
- airline administrative procedures
- airline standards for providing appropriate assistance and advice to passengers prior to take-off, during flight and on arrival
- cabin features and amenities for various types of aircraft
- features and amenities of terminals at designated airports
- principles of customer service
- problems that may need to be addressed when providing customer service and action that can be taken to address these problems
- relevant customs, quarantine, equal opportunity and anti-discrimination regulations
- relevant regulatory requirements
- relevant WHS/OHS, hygiene and environmental procedures and regulations
- requirements for cabin crew to suspend customer service and be seated during take-off and landing and when otherwise directed by pilot in command (PIC) or other senior air crew
- transport options at designated airports.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVII0006 Carry out beverage service on an aircraft

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to carry out beverage service on an aircraft in compliance with relevant regulatory requirements of national operating standards.

It includes handling stock and materials, advising passengers, taking drink orders, and preparing and serving beverages. It also includes using trays, clearing and cleaning carts/tables and equipment, and preparing and using tea and coffee making equipment.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to customer service duties of flight crew and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

I – Customer Service

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

1 Handle stock and materials

- 1.1 Beverage storage area is checked and replenished at scheduled times using correct documentation in accordance with workplace procedures and customs regulations
- 1.2 Items are stored in appropriate places at the recommended storage temperature
- 1.3 Products are checked to ensure quality meets the required standard in accordance with workplace procedures
- 1.4 Beverage service area is kept clean, attractive and complete in accordance with workplace procedures and standards
- 1.5 Glassware is kept hygienically clean, free from chips and cracks and is stored correctly in accordance with workplace procedures
- 1.6 Familiarity with products to be offered is undertaken prior to service provision
- 1.7 Hazards are identified, risks are assessed and hazard management implemented
- 1.8 Customs documentation is completed as required in accordance with regulatory requirements and workplace procedures

2 Advise passengers

- 2.1 Advice is offered to passengers to assist them in an appropriate selection of products
- 2.2 Passenger complaints are resolved to their satisfaction within limits of own authority in accordance with workplace procedures and regulatory requirements
- 2.3 Passenger complaints that require further action are referred to supervisor in accordance with workplace procedures and regulatory requirements

3 Take beverage orders

- 3.1 Orders are taken accurately and are either written or memorised
- 3.2 Clear and helpful advice is given to passengers on selection of beverages

4 Prepare and serve

- 4.1 Beverages are prepared to legal and airline standards

	beverages		using the correct ingredients and measures, and are made to passenger requests
		4.2	Beverages are served promptly and courteously
5	Use trays	5.1	Drink trays are loaded skilfully and safely ensuring correct balance
		5.2	Drink trays are carried and unloaded in accordance with regulatory requirements
		5.3	Beverages are poured and served in accordance with workplace procedures and regulatory requirements
6	Clear and clean carts/tables and equipment	6.1	Passenger tables are cleared at an appropriate time in a polite manner
		6.2	Beverage and food service tables and carts are cleaned hygienically and are prepared for further service in accordance with workplace procedures and standards
		6.3	Utensils and glassware are stowed ready for cleaning as required
7	Prepare and use tea and coffee making equipment	7.1	Tea and coffee making equipment is prepared ready for use in accordance with workplace procedures and regulatory requirements
		7.2	Passengers are offered a range of beverage service options and served in accordance with passenger requests

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVII2003 Carry out beverage service on an aircraft.

Assessment Requirements for AVII0006 Carry out beverage service on an aircraft

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- advising passengers on beverages, including:
 - providing them with a range of options:
 - cold beverages
 - hot beverages
 - low alcohol and non-alcoholic beverages
- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures related to beverage service
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- airline procedures and standards for serving non-alcoholic beverages on aircraft
- features and characteristics of various types of non-alcoholic beverages
- hygiene and safety issues of specific relevance to beverage service
- principles of passenger service
- problems that may occur when serving non-alcoholic beverages and appropriate action that should be taken in each case
- relevant customs, quarantine, equal opportunity and anti-discrimination regulations
- relevant WHS, hygiene and environmental procedures, standards and regulations
- risks that exist when serving non-alcoholic beverages, and related risk control procedures and precautions
- typical service flows within an aircraft beverage service environment.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVII0007 Provide advice about cuisine on an aircraft

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to provide advice about cuisine on an aircraft in compliance with relevant regulatory requirements of national operating standards.

It includes discussing menu items and selections, advising passengers about food and special menu items, obtaining feedback from passengers and others, and contributing to menu development.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to customer service duties of flight crew and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Assessment Requirements for AVII0007 Provide advice about cuisine on an aircraft

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- providing advice on cuisine, including special menu items:
 - ingredients
 - methods of preparation
 - origins
 - presentation styles
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others when providing advice on cuisine on an aircraft
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of elements, performance criteria and range of conditions and include knowledge of:

- airline procedures and standards for providing advice on cuisine to passengers
- features and characteristics of various types of food served on commercial aircraft, including special menu items
- food presentation for different types of airline service
- hygiene and safety issues of specific relevance to food and beverage service
- principles of customer service
- problems that may occur when providing advice on cuisine to passengers, and to passengers with specific needs, and appropriate action that should be taken in each case
- relevant equal opportunity and anti-discrimination regulations
- relevant information about meal ingredients, special dietary requirements and food allergies
- relevant regulatory requirements
- risks that exist when providing advice about cuisine to passengers and related risk control procedures and precautions
- standard airline menus and menu items.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVII0008 Conduct in-flight retailing

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to conduct in-flight retailing in compliance with relevant regulatory requirements of national operating standards.

It includes assessing customer needs, promoting products and customer services, handling payments, handling complaints and completing administrative requirements. It also includes carrying out stocktaking procedures, reconciling money/stock, ordering and storing stock, and maintaining security of goods and revenue.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to customer service duties of flight crew and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Assess customer needs	1.1 Appropriate questioning techniques are used to determine customer needs and product preferences in accordance with workplace procedures 1.2 Individual needs of customers are accurately assessed and suitable products identified 1.3 Advice is courteously provided to customers about products available for sale in accordance with workplace procedures and trade practices regulations
2 Promote products and customer services	2.1 Products and services available to customers are effectively promoted in accordance with workplace procedures 2.2 Selling techniques appropriate to the product and customer are employed in order to make sale in accordance with workplace procedures
3 Handle payments	3.1 Customers are courteously advised of amount due in accordance with workplace procedures 3.2 Payments for products are processed in accordance with workplace procedures, including credit card transactions 3.3 Currency conversion rates are correctly applied during transactions 3.4 Correct change is returned to customer 3.5 Appropriate precautions are taken to minimise/identify incidences of credit card fraud in accordance with workplace procedures
4 Handle complaints	4.1 Complaints are promptly and sensitively identified and received in accordance with workplace procedures 4.2 Complaints are handled and/or reported to senior personnel in accordance with workplace procedures 4.3 Appropriate follow-up action is taken to ensure a positive outcome in accordance with workplace procedures
5 Complete administrative requirements	5.1 Reconciliation of money and stock is completed in accordance with workplace procedures

- | | | |
|----------|---|---|
| | 5.2 | Appropriate documentation of financial transactions and reconciliations is completed in accordance with workplace procedures and customs requirements |
| | 5.3 | Pay-in procedures are accurately performed in accordance with workplace operational and security procedures |
| 6 | Carry out stocktaking procedures | 6.1 Stocktaking procedures are carried out accurately in a timely manner and in accordance with workplace procedures and regulatory requirements |
| | 6.2 | Shortfalls are checked and reported as required |
| | 6.3 | Required stocktaking documentation is completed in accordance with workplace procedures and customs requirements |
| 7 | Order and store stock | 7.1 Internal requisitions are correctly placed in accordance with workplace procedures and customs requirements |
| | 7.2 | Uplifted stock is received and checked for quality and quantity |
| | 7.3 | Faulty or incorrect goods delivered are promptly identified and appropriate action taken in accordance with workplace procedures |
| | 7.4 | Uplifted stock is correctly stored in accordance with workplace procedures |
| | 7.5 | Stock is handled and stored using safe manual handling methods in accordance with work health and safety (WHS)/occupational health and safety (OHS) regulations |
| 8 | Maintain security | 8.1 Compliance is maintained with security procedures to protect saleable amenities and revenue at all times in accordance with workplace procedures |
| | 8.2 | Breaches in security are promptly identified and reported, and appropriate action is taken in accordance with workplace procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVII2006 Conduct in-flight retailing.

Assessment Requirements for AVII0008 Conduct in-flight retailing

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying relevant legislation and workplace procedures
- communicating effectively with others
- using questioning techniques, including:
 - active listening
 - checking understanding
 - closed questions
 - leading/rhetorical questions
 - limiting questions
 - open questions
- using sales techniques to promote inflight products, including:
 - benefits
 - features
 - match to customer needs
 - payment methods
 - price
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information

and signs

- reporting and/or rectifying problems, faults and malfunctions promptly in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- airline procedures and standards for in-flight retailing, including selling, stocktaking, stock/money reconciliation, customs, security and administrative processes
- principles of customer service and effective selling
- effective communication skills
- problems that may occur when conducting in-flight retailing and appropriate action that should be taken in each case
- relevant customs, quarantine, equal opportunity and anti-discrimination regulations
- relevant regulatory requirements for in-flight retailing
- relevant WHS/OHS, hygiene and environmental procedures and regulations
- risks that exist when conducting in-flight retailing and related risk control procedures and precautions
- saleable products, amenities and services, including their features, characteristics and pricing.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations

- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVII0009 Check in aircraft passengers

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to check in aircraft passengers in compliance with relevant regulatory requirements and national operating standards.

It includes greeting passengers, checking in passengers using manual and computerised processes, and checking in baggage. It also includes responding to problems during check-in, issuing boarding passes and directing passengers to security gates.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to customer service duties of ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

1 Greet passenger

- 1.1 Passenger is greeted in accordance with workplace customer service procedures
- 1.2 Passenger is asked for name and flight details
- 1.3 Photographic identification is requested from passenger and identity is confirmed
- 1.4 Passenger is advised of prohibited items not to be carried onto aircraft or carried in baggage in accordance with regulatory requirements

2 Check in passenger using manual process

- 2.1 Passenger name is identified and confirmed on passenger list for nominated flight in accordance with manual check-in procedures
- 2.2 Passenger seating preference on aircraft is sought and allocated where possible
- 2.3 Passenger check in is recorded on passenger list and a suitable and available aircraft seat is allocated in accordance with flight requirements, seating plan, zoning weight and balance restrictions, and workplace procedures
- 2.4 Passenger is advised of changes in flight arrangements, including delays, cancellations and gate changes

3 Check in passenger using computerised process

- 3.1 Passenger name and indicated flight are entered into the system in accordance with computerised procedures and relevant workplace procedures
- 3.2 Passenger flight booking is confirmed on the system
- 3.3 Appropriate action is initiated to resolve the problem of a passenger name not being found in flight bookings in accordance with workplace procedures
- 3.4 Passenger aircraft seating preference is sought or confirmed from loyalty program preference profile
- 3.5 Passenger check-in is confirmed on flight management systems, and suitable and available aircraft seating is allocated in accordance with workplace procedures

4 Check in baggage

- 4.1 Passenger is requested to present baggage for check in
- 4.2 All weighing equipment is checked for serviceability

and weighing scales are calibrated in accordance with workplace procedures

- 4.3 Cabin baggage items are checked to ensure they fall within allowable passenger baggage requirements, and passenger is courteously advised to check in non-compliant cabin baggage items with other items in aircraft hold
- 4.4 Passenger checked-in baggage is weighed on scales in accordance with workplace procedures and compared to passenger class of travel allowable limits
- 4.5 Passenger is advised and arrangements made for excess baggage payment for baggage above allowable limit but permissible under excess baggage rules, in accordance with workplace procedures
- 4.6 Passenger is advised about baggage above allowable limit where excess is not permissible under regulatory requirements, and is requested to take appropriate action to reduce baggage weight to within allowable limit in accordance with workplace procedures
- 4.7 Baggage details are recorded on aircraft baggage list and entered into computer system in accordance with workplace procedures for type of check-in process being used
- 4.8 Baggage is labelled in accordance with workplace procedures using either manually or printer-produced tags in accordance with system being used, including overweight, oversize or fragile labels as required
- 4.9 Passenger loyalty program baggage labels are applied as required
- 4.10 Passenger baggage is placed on baggage belt or cart in preparation for aircraft loading
- 4.11 Passenger baggage check-in record is attached to ticket or boarding pass sleeve
- 4.12 Baggage is handled at all times in accordance with work health and safety (WHS) regulations and workplace procedures

5 Respond to problems during check in

- 5.1 Problems arising during check in are promptly identified and clarified in accordance with workplace procedures

- 5.2** Hazards are identified, risks are assessed and hazard management implemented
 - 5.3** Options to resolve identified problems are explored in consultation with passenger and other staff in accordance with workplace procedures and relevant regulatory requirements
 - 5.4** Passenger check-in problems not immediately resolved are referred to appropriate supervisor or other relevant staff for action in accordance with workplace procedures
- 6 Issue boarding pass**
 - 6.1** On finalisation of check-in procedures, a manual or electronic boarding pass is issued and presented to passenger in accordance with workplace procedures
 - 6.2** Passenger attention is drawn to relevant details on boarding pass, including flight code, boarding gate and required boarding time
- 7 Direct passenger to security gate**
 - 7.1** Passenger is directed to security gate in accordance with workplace procedures
 - 7.2** Passengers subscribing to a loyalty scheme and/or airline club are advised of location of appropriate lounge and facilities in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVII2007 Check in aircraft passengers.

Assessment Requirements for AVII0009 Check in aircraft passengers

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing documentation related to aircraft passengers
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- responding appropriately to cultural differences in the workplace
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include

knowledge of:

- airline standards for providing appropriate check-in services for passengers
- baggage check-in limits and requirements
- check-in records/documentation
- features, amenities and departure gate locations of terminals at designated airports
- passenger identification requirements
- principles of customer service
- problems that may occur when checking in passengers for aircraft flights and appropriate action that should be taken in each case
- problems during check-in, including:
 - delayed or cancelled flight
 - excess baggage
 - late check in
 - no record of passenger claimed booking
 - overweight or oversize cabin baggage
 - possession or prohibited items on passenger or in cabin or checked-in baggage
- relevant customs, quarantine, equal opportunity and anti-discrimination regulations
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders for passenger handling and check-in procedures
- relevant WHS regulations
- risks that exist when checking in passengers for aircraft flights and related risk control procedures and precautions
- seat allocation procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

- relevant materials, tools, equipment and PPE currently used in industry.

AVII0010 Provide assistance to transit and arriving passengers

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to provide assistance to transit and arriving passengers in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes greeting transit and arriving passengers, checking in passengers using manual and computerised processes, responding to passenger problems, issuing boarding pass for next leg of flight, and directing transit passengers to transit lounges.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to customer service duties of ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

I – Customer Service

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---|---|
| 1 Greet transit passenger | <p>1.1 Transit passenger is greeted in accordance with workplace customer service procedures</p> <p>1.2 Transit passenger is asked for boarding pass and/or name and details of their flight and destination, and is directed to relevant terminal/check-in area</p> <p>1.3 Transit passenger queries concerning flight and transit arrangements are answered accurately, courteously and in accordance with workplace customer service standards and procedures</p> |
| 2 Greet arriving passenger | <p>2.1 Arriving passenger is greeted in accordance with workplace customer service procedures</p> <p>2.2 Arriving passenger is directed to baggage carousel area and/or terminal exit and transport services</p> <p>2.3 Arriving passenger with international connections is directed to relevant terminal/check-in area</p> <p>2.4 Arriving passenger queries and concerns are answered courteously in accordance with workplace customer service standards and procedures</p> |
| 3 Check in passenger for next leg using manual process | <p>3.1 Passenger name is identified and confirmed on passenger list for nominated flight in accordance with manual procedures</p> <p>3.2 Appropriate action is initiated to resolve the problem of a passenger name not being found in flight bookings in accordance with workplace procedures</p> <p>3.3 Passenger is advised of changes in flight arrangements, including delays, cancellations and gate changes</p> <p>3.4 Passenger seating preference on aircraft is sought or confirmed from loyalty program preference profile</p> <p>3.5 Passenger is advised of prohibited items not to be carried onto aircraft or carried in baggage in accordance with regulatory requirements</p> <p>3.6 Passenger check-in is confirmed on flight management systems, and suitable and available aircraft seating is allocated using appropriate workplace procedures</p> |

- | | | |
|---|------------|--|
| 4 Check in transit passenger for next leg using computerised process | 4.1 | Passenger name and indicated flight are entered into the system in accordance with computerised procedures and relevant workplace procedures |
| | 4.2 | Passenger booking for the next leg of the flight is confirmed on the system and passenger is advised of any changes in flight arrangements |
| | 4.3 | Appropriate action is initiated to resolve the problem of a passenger name not being found in flight bookings in accordance with workplace procedures |
| | 4.4 | Passenger aircraft seating preference is sought or confirmed from loyalty program preference profile |
| | 4.5 | Passenger is advised of prohibited items not to be carried onto aircraft or carried in baggage in accordance with regulatory requirements |
| | 4.6 | Passenger check-in is confirmed on flight management systems, and suitable and available aircraft seating is allocated in accordance with workplace procedures |
| 5 Respond to passenger problems | 5.1 | Problems arising for an arriving or transit passenger are promptly identified and clarified in accordance with workplace procedures |
| | 5.2 | Hazards are identified, risks are assessed and hazard management implemented |
| | 5.3 | Options for resolving identified problems are explored in consultation with passenger and appropriate staff in accordance with workplace procedures and relevant regulatory requirements |
| | 5.4 | Passenger check-in problems not immediately resolved are referred to appropriate supervisor or other relevant staff for action in accordance with workplace procedures |
| 6 Issue boarding pass for next leg of flight | 6.1 | On finalisation of check-in procedures, a manual or electronic boarding pass is issued and presented to passenger in accordance with workplace procedures |
| | 6.2 | Passenger attention is drawn to relevant details on boarding pass, including flight code, boarding gate and required boarding time |
| 7 Direct transit passenger | 7.1 | Passenger is directed to transit lounge and facilities in |

to transit lounge

accordance with workplace procedures

- 7.2 Passengers subscribing to a loyalty scheme and/or airline club are advised of location of appropriate lounge and facilities in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVII2008 Provide assistance to transit and arriving passengers.

Assessment Requirements for AVII0010 Provide assistance to transit and arriving passengers

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required actions to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include

knowledge of:

- airline standards and procedures for providing appropriate services for transit and arriving passengers
- baggage check-in limits and requirements
- check-in records/documentation
- features, amenities, transit club lounges and departure gate locations at designated airports
- passenger identification requirements
- principles of customer service
- problems that may occur when assisting transit and arriving passengers and appropriate action that should be taken in each case, including:
 - delayed or cancelled flight
 - lack of understanding of terminal layout
 - incoming flight late arrival
 - no record of passenger booking for next leg of flight
 - possession or prohibited items on passenger or in cabin or checked-in baggage
- relevant customs, quarantine, equal opportunity and anti-discrimination regulations
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders for passenger handling and check-in procedures
- relevant WHS regulations
- risks that exist when assisting transit and arriving passengers and related risk control procedures and precautions
- seat allocation procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVII0011 Carry out food preparation and service on an aircraft

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to carry out food preparation and service on an aircraft in compliance with relevant regulatory requirements of national operating standards.

It includes preparing galley for service; receiving, checking and storing goods; checking and maintaining galley; and responding to breakdown in galley or cabin equipment. It also includes preparing equipment for use, preparing and presenting food for service, carrying out galley service, cleaning galley and equipment, and preparing galley for landing.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to customer service duties that complement the non-technical skills of flight crew and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

I – Customer Service

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes. Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---|--|
| 1 Prepare galley for service | 1.1 Galley equipment, bar carts and other applicable food service items are checked to ensure levels of stock and equipment are appropriate to level of service and sector requirements |
| | 1.2 Menus are checked against catering supplied and are prepared for distribution as required |
| | 1.3 Dry stores are checked for availability |
| | 1.4 Tea and coffee making equipment and materials are prepared for service in accordance with regulatory requirements and workplace procedures and standards |
| 2 Receive, check and store goods | 2.1 Food and equipment are checked against passenger load figures and checklists |
| | 2.2 Defects and shortages are identified and reported to appropriate person/department in accordance with workplace procedures |
| | 2.3 Non-exchange equipment is inspected for defects and appropriate action is taken as required |
| | 2.4 Dry stores are received and stowed in accordance with regulatory requirements and workplace procedures |
| | 2.5 Appropriate action is initiated/taken to minimise effect on service when problems with stock or equipment are identified |
| 3 Check and maintain galley | 3.1 Galley is inspected and maintained to ensure it is clean, well-lit and at the correct temperature |
| | 3.2 Defects and problems with galley equipment are identified and reported in accordance with workplace procedures |
| | 3.3 Catering checklist is used with required levels of speed and accuracy |
| | 3.4 Foods and goods are correctly issued in accordance with passenger requests |
| | 3.5 Security in galley area is maintained in accordance with regulatory requirements and workplace procedures |

- 3.6 Familiarity with store area is maintained and used to enable smooth workflow
 - 3.7 Hazards are identified, risks are assessed and hazard management implemented
 - 3.8 Identified galley equipment irregularities and defects are followed up with relevant personnel in accordance with workplace procedures
 - 4 **Respond to breakdown in galley or cabin equipment**
 - 4.1 Breakdown in galley or cabin equipment is identified, recorded in equipment failure log and notified to a senior crew member in accordance with workplace procedures
 - 4.2 Appropriate strategy for dealing with breakdown is formulated in conjunction with the pilot in command (PIC) and/or other flight or cabin crew in accordance with workplace procedures
 - 4.3 Passengers are kept informed of the nature of the problem and action taken as required in accordance with workplace procedures
 - 4.4 Alternative action is taken as appropriate to maintain cabin service in accordance with agreed strategy
 - 5 **Prepare equipment for use**
 - 5.1 Equipment needed for service is checked for cleanliness and is prepared for use in accordance with workplace procedures and regulatory requirements for safety and hygiene
 - 5.2 Carts and/or serving equipment are set up in accordance with workplace procedures for relevant menus
 - 6 **Prepare and present food for service**
 - 6.1 Food items are prepared in accordance with workplace procedures and recipes, and food hygiene regulatory requirements
 - 6.2 Food for menu items is correctly identified
 - 6.3 Oven temperatures are set at appropriate levels and food is transferred at appropriate times in accordance with workplace procedures and recipes, and food hygiene regulatory requirements
 - 6.4 Food is monitored to ensure food quality is in accordance with workplace procedures

- 6.5** Sufficient supplies of clean, undamaged crockery are made available at temperatures appropriate to food being served
 - 6.6** Food is portioned in accordance with workplace procedures, recipes, product and service standards
 - 6.7** Food items are arranged and presented without drips or spills in accordance with regulatory requirements and workplace procedures
- 7 Carry out galley service**
 - 7.1** Crew are advised when meal service is due to commence
 - 7.2** Meal service operations are monitored and additional food prepared as required
 - 7.3** Work is completed effectively in conjunction with other crew members to ensure timely, quality food service
 - 7.4** Quality of food items is regularly monitored in accordance with workplace procedures and appropriate action is taken as required
 - 7.5** Towels are prepared hygienically at appropriate times and forwarded as required to cabin staff for service in accordance with regulatory requirements and workplace procedures
 - 7.6** Galley operations are adjusted as required to meet service and operational requirements and contingencies in accordance with workplace procedures
- 8 Clean galley and equipment**
 - 8.1** Unused food items are returned to correct storage area in accordance with workplace procedures
 - 8.2** Soiled and used linen and towels are collected, sorted and removed in accordance with workplace procedures and regulatory requirements
 - 8.3** Appropriate cleaning materials are identified and selected in accordance with workplace procedures and regulatory requirements
 - 8.4** Equipment is cleaned in accordance with workplace procedures, manufacturer instructions and regulatory requirements
 - 8.5** Cleaning materials and equipment are correctly and

- safely stored in accordance with regulatory requirements and workplace procedures
- 8.6** Waste is identified and sorted in accordance with regulatory requirements and workplace procedures
- 9 Prepare galley for landing**
- 9.1** Galley facilities and equipment are checked and secured for landing in accordance with workplace procedures and regulatory requirements
- 9.2** Stock levels are checked and additional stock ordered as required to meet passenger load requirements for next sector
- 9.3** Appropriate action is taken to ensure compliance with quarantine regulations is maintained
- 9.4** Non-exchange items are sorted and stored in accordance with workplace procedures
- 9.5** Feedback on galley service provided is sought from other crew members and problems that may have been experienced are appropriately documented
- 9.6** Suggestions are made to supervisory personnel in accordance with workplace procedures on options for possible improvements to food service operations
- 9.7** Galley administrative and feedback documentation is completed and stored in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVII3002 Carry out food preparation and service on an aircraft.

Assessment Requirements for AVII0011 Carry out food preparation and service on an aircraft

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- airline standards for food preparation and galley service

- features of galley and equipment for various types of aircraft
- galley service procedures
- menus and food presentation requirements for various classes of air travel service offered by airlines
- principles of food preparation and galley service
- problems that may occur when carrying out food preparation and galley service and appropriate action that should be taken in each case
- procedures for cleaning galley and equipment and disposing of waste
- relevant airline administrative procedures and related documentation
- relevant information/documents, including:
 - airline procedures, instructions and job specifications
 - checklist and procedures for pre-landing galley operations
 - food preparation and service standards
 - food preparation procedures
 - galley administrative and feedback documentation
 - galley service and cleaning checklists and procedures
 - galley equipment operational manuals
 - hygiene, quarantine and environmental procedures and regulations
 - manufacturer instructions for cleaning equipment and materials
 - meal menus
 - passenger manifests and checklists
 - pre-landing checklists and procedures
 - stock inventory and ordering documentation
- risks that exist when carrying out food preparation and galley service and related risk control procedures and precautions.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment

- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVII0012 Apply knowledge of the structure, products and services of an airline operator

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to apply knowledge of the structure, products and services of an airline operator.

It includes developing and applying an understanding of the structure of the aviation and tourism industries, developing and applying an understanding of the economic and social significance of aviation and tourism in Australia, identifying markets for a particular airline, and developing and applying an understanding of the structure and operations of an airline.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to customer service duties of ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational and commercial aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

No licensing, legislative, regulatory or certification requirements are applicable to this unit at time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

I – Customer Service

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Develop and apply an understanding of the structure of the aviation and tourism industries in Australia

- 1.1** Sources of information on the structure and function of the aviation and tourism industries are identified and accessed in accordance with workplace procedures
- 1.2** An understanding of the broad structures of the aviation industry and their relationship with each other is developed and appropriately applied to day-to-day work
- 1.3** An understanding of the sectors in the aviation industry and their relationship with each other is developed and appropriately applied to day-to-day work
- 1.4** An understanding of the sectors in the tourism industry and their relationship with each other is developed and appropriately applied to day-to-day work
- 1.5** Roles of individual airlines in the aviation industry are correctly identified and explained

2 Develop and apply an understanding of the economic and social significance of aviation and tourism in Australia

- 2.1** Sources of information on the economic and social significance of the aviation and tourism industries are identified and accessed in accordance with workplace procedures
- 2.2** An understanding of the economic and social significance of the aviation and tourism industries is developed and appropriately applied to day-to-day work
- 2.3** For a given airline, an understanding of the scope of its operations and the economic and social significance of its contribution to the aviation and tourism industries is developed and appropriately applied to day-to-day work

3 Identify markets for a particular airline

- 3.1** Products and services offered by a particular airline for specific markets are correctly identified and explained
- 3.2** An understanding of the characteristics of domestic and overseas markets served by Australian international, domestic, regional and charter airlines is developed and

applied as appropriate to day-to-day work

4 Develop and apply an understanding of the structure and operations of an airline

- 4.1** Sources of information on the structure, history and function of a particular airline are identified and accessed in accordance with workplace procedures
- 4.2** An understanding of the structure and day-to-day operations of a particular airline is developed and applied to day-to-day work
- 4.3** The history and operational culture of a particular airline are researched, explained and applied to day-to-day work
- 4.4** An understanding of the importance of the principles of crew resource management (CRM) and human factors (HF) is developed and applied to day-to-day work
- 4.5** The ways in which aircrew work together as a team are correctly identified and explained
- 4.6** An understanding of the employment conditions, benefits and responsibilities for relevant positions within an airline are developed and applied to day-to-day work

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVII3005 Apply knowledge of the structure, products and services of an airline operator.

Assessment Requirements for AVII0012 Apply knowledge of the structure, products and services of an airline operator

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule of an airline operation
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- airline administrative procedures
- airline operational standards and procedures
- broad structures of the Australian aviation and tourism industries
- economic and social significance of the aviation and tourism industries
- key sectors in the aviation industry, including international, domestic, regional and charter airline operations, including:
 - air traffic control (ATC)
 - aircraft catering and resourcing
 - aircraft flight operations (flight and cabin service crew)
 - aircraft maintenance
 - airport management
 - aviation emergency services
 - aviation regulatory authorities
 - aviation training
 - baggage handling
 - freight services
 - ground customer service staff (check-in, arrivals and transit)
 - ground support to aircraft
 - security personnel
- key sectors of the aviation industry, including:
 - call centres
 - entertainment
 - hospitality and accommodation
 - ticketing
 - transport
 - travel agencies
- principles and philosophies underpinning the operation of the aviation industry
- relevant customs, quarantine, equal opportunity and anti-discrimination regulations
- relevant WHS, hygiene and environmental procedures and regulations
- structure of the aviation and tourism industry, including:
 - challenges facing the aviation and tourism industries and strategies used by airlines and enterprises to meet these challenges
 - features of the aviation industry
 - nature of the relationships between different sectors in the two industries
 - roles and functions of the various industry sectors
 - services offered by each sector and major industry bodies
- structures, history and functions of relevant airline/s.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training

Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVII0013 Carry out aircraft business and first class meal and non-alcoholic beverage service

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to carry out aircraft business and first class meal and non-alcoholic beverage service in compliance with relevant regulatory requirements of national operating standards.

It includes preparing for meal service; preparing, laying and setting tables; and cleaning, preparing and displaying mobile service unit. It also includes describing food and dishes to passengers, advising passengers about non-alcoholic beverage selection, and plating and serving a range of foods from a mobile service unit. It also includes working in cooperation with galley operator, rectifying spillages, clearing and re-laying tables, resetting mobile service units and handling passenger complaints.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to customer service duties of flight crew and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare for meal service

- 1.1** Food is prepared hygienically in accordance with workplace procedures and regulatory requirements
- 1.2** Equipment used in food preparation is maintained in a safe and hygienic condition at all times in accordance with workplace procedures and regulatory requirements
- 1.3** Equipment, implements and utensils are used in a safe manner throughout the preparation and serving of food or dishes
- 1.4** Work practices and methods of service adopted during meal service operations are in accordance with workplace procedures and standards, ensuring the safety of staff and passengers
- 1.5** Menus and wine lists are sourced and consulted on to ensure product knowledge

2 Prepare, lay and set tables

- 2.1** Tables are laid and set with appropriate cloths in accordance with workplace procedures and standards
- 2.2** Tables are prepared to workplace standards, with the appropriate equipment and utensils for a given menu

3 Clean, prepare and display mobile service unit

- 3.1** Mobile service unit is checked to ensure it is cleaned to workplace standards in preparation for service
- 3.2** Mobile service unit equipment is checked to ensure it is clean and serviceable
- 3.3** Items for salad preparation and garnishing are prepared and displayed on mobile service unit in accordance with workplace procedures and customer service standards
- 3.4** Mobile service unit is set up in accordance with regulatory requirements, and workplace procedures and standards

4 Advise passengers about food and non-alcoholic

- 4.1** Dish names and specialities are explained to passengers

beverage selection

- 4.2** Ingredients of dishes and preparation methods are explained and shown to passengers to assist them in selecting dishes appropriately relative to their dietary requirements, as required
- 4.3** Appropriate advice is politely given to passengers to assist them in selecting non-alcoholic beverages at the appropriate time
- 5 Plate and serve a range of foods from mobile service unit**
- 5.1** Appropriate portions of foods are correctly positioned on plates in accordance with workplace procedures and standards prior to leaving the galley
- 5.2** Appropriate accompaniments are selected to suit passenger meal choice
- 5.3** Meal choice is presented to passenger in accordance with regulatory requirements, and workplace procedures and standards
- 6 Work in cooperation with galley operator**
- 6.1** Liaison with galley staff is established and maintained to ensure correct preparation, presentation and timing of meals and meal service to passengers is appropriately adjusted as required
- 6.2** Appropriate relationship is established and maintained with galley operator and cabin operators to ensure service is maintained correctly
- 7 Rectify spillages, clear and re-lay table**
- 7.1** Spillages are promptly identified and dealt with in accordance with workplace procedures and standards
- 7.2** Spilt food/beverage is replaced as required with minimum disruption to passengers and crew
- 7.3** Debris is removed and linen changed safely and promptly after spillage
- 7.4** Passenger needs are attended to in a polite and friendly manner in accordance with workplace procedures and standards
- 7.5** Tables are cleaned, set and re-laid as required after completion of meals ensuring minimum disruption to passenger
- 8 Reset mobile service unit**
- 8.1** Mobile service unit is cleaned at appropriate time in

- accordance with workplace procedures and standards
- 8.2 Mobile service unit is reset correctly with appropriate equipment
 - 8.3 Mobile service unit is restocked correctly with clean equipment, utensils and linen in accordance with regulatory requirements, and workplace procedures and standards
- 9 Handle passenger complaints**
- 9.1 Complaints on service or meals are received promptly and in a courteous manner from passengers
 - 9.2 Passenger complaints are handled in a timely and courteous manner in accordance with workplace procedures and standards
 - 9.3 Passengers are advised about action that will be taken in response to their complaints
 - 9.4 Appropriate follow-up action is taken and passenger satisfaction checked in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVII3010 Carry out aircraft business and first class meal and non-alcoholic beverage service.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVII0013 Carry out aircraft business and first class meal and non-alcoholic beverage service

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly, in accordance with workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- airline procedures and standards for providing a business and first class meal and non-alcoholic beverage service on an aircraft

- features and characteristics of various types and styles of food and non-alcoholic beverages served in business and first class on aircraft
- hygiene and safety issues relevant to food and beverage service
- principles of customer service
- problems that may occur when providing a meal and beverage service on an aircraft and appropriate action that should be taken in each case
- relevant information/documents, including:
 - airline food and non-alcoholic beverage service procedures and checklists
 - airline procedures, instructions and job specifications
 - food and beverage service checklists
 - relevant regulatory requirements for serving food and non-alcoholic beverages on aircraft
- relevant WHS, hygiene and environmental procedures and regulations
- risks that exist when providing a meal and beverage service on an aircraft and related risk control procedures and precautions
- typical service flows within an aircraft food and beverage service environment.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVII4013 Supervise cabin operations

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to supervise cabin operations, in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes planning and preparing for flight, supervising cabin service and resources, using and maintaining aircraft cabin equipment, and completing administrative requirements.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to customer service duties of flight crew, and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Use for Defence Aviation is to be in accordance with relevant Defence Orders, Instructions, Publications and Regulations.

Pre-requisite Unit

Not applicable.

Competency Field

I – Customer Service

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--|--|
| 1 Plan and prepare for flight | 1.1 Liaison with relevant flight crew is undertaken to confirm departure tasks |
| | 1.2 Cabin preparation tasks are confirmed as completed and reported to appropriate flight crew |
| | 1.3 Flight crew are briefed on aircraft passenger and cargo load details as required |
| 2 Supervise cabin service and resources | 2.1 Cabin service standards are monitored throughout the flight in accordance with enterprise standards |
| | 2.2 Crew members are assisted to prioritise workload |
| | 2.3 Consultation with senior flight crew and other crew members is undertaken to determine improvements in efficiency and service levels |
| | 2.4 Aircraft stores and supplies are managed to achieve a cost effective result for the airline, while maintaining high quality customer service |
| | 2.5 Operational difficulties and problems are anticipated and resolved |
| | 2.6 Incidents related to unlawful interference with aviation during flight are resolved in accordance with regulatory requirements |
| 3 Use and maintain aircraft cabin equipment | 3.1 Cabin equipment is used in accordance with manufacturer instructions and enterprise procedures |
| | 3.2 Faults are accurately diagnosed and promptly reported in accordance with enterprise procedures |
| 4 Complete administrative requirements | 4.1 Cabin operations administrative documentation is completed at the appropriate time in accordance with airline procedures and regulatory requirements |
| | 4.2 Input about operational requirements is provided to appropriate personnel in accordance with enterprise |

procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Problems and incidents during supervision of cabin operations must include one or more of the following:

- delayed or cancelled flight
- faulty cabin service or aircraft safety equipment
- incidents classified as unlawful interference with aviation
- passenger or staff illness
- use of technical devices

Unit Mapping Information

This unit replaces and is equivalent to AVII4013A Supervise cabin operations.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVII4013 Supervise cabin operations

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others when providing leadership and supervising cabin operations
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing response actions to unlawful interference with aviation incidents relevant to own role
- implementing work health and safety (WHS)/occupational health and safety (OHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment conforming to industry and WHS/OHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- airline standards, principles and philosophies for providing quality customer service to passengers
- airline structure, products, policies, procedures and service standards
- appropriate service to customers with a range of disabilities and specific needs
- cabin features and amenities for various types of aircraft
- cabin product and service procedures
- complaint handling procedures
- customer service records/documentation
- features, amenities and departure gate locations of terminals at designated airports
- importance of customer service to airline and to individual crew responsibility
- needs and expectations of different types of customers, including internal and external customers
- problems that may occur when providing customer service to passengers on aircraft flights and appropriate action that should be taken in each case
- relevant enterprise business plans
- relevant customs, quarantine, equal opportunity and anti-discrimination regulations
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders for supervision of cabin operations
- relevant WHS/OHS regulations
- risks that exist when providing customer service to passengers on aircraft flights and related risk control procedures and precautions
- service quality and continuous improvement principles
- unlawful interference with aviation incidents and response actions relevant to own role:
 - causing damage to an aircraft that is in service that puts the safety of the aircraft, or any person on board or outside the aircraft, at risk
 - committing an act at an airport, or causing any interference or damage, that puts the safe operation of the airport, or the safety of any person at the airport, at risk
 - destroying an aircraft that is in service
 - doing anything on board an aircraft that is in service that puts the safety of the aircraft, or any person on board or outside the aircraft, at risk
 - placing, or causing to be placed, on board an aircraft that is in service anything that puts the safety of the aircraft, or any person on board or outside the aircraft, at risk
 - putting the safety of an aircraft at risk by communicating false or misleading information
 - putting the safety of aircraft at risk by interfering with, damaging or destroying air navigation facilities
 - taking control of an aircraft by force, or threat of force, or any other form of intimidation

or by any trick or false pretence.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

AVII4015 Monitor and enhance customer service excellence

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to monitor and enhance customer service excellence.

It includes delivering excellence in customer service, monitoring and adjusting customer service performance, and seeking information from customers and staff. It also includes developing approaches to enhance customer service, and encouraging staff to take responsibility for customer service problems.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to customer service duties of aviation personnel, and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

No licensing, legislative, regulatory or certification requirements are applicable to this unit at time of publication.

Use for Defence Aviation is to be in accordance with relevant Defence Orders, Instructions, Publications and Regulations.

Pre-requisite Unit

Not applicable.

Competency Field

I – Customer Service

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Deliver excellence in customer service	1.1 Customer service expectations are consistently exceeded
	1.2 Quality, safety, resource and delivery standards are consistently met
	1.3 Airline records are maintained accurately in accordance with airline systems and procedures
2 Monitor and adjust customer service performance	2.1 Customer service performance standards are monitored and reviewed using a range of systems and techniques
	2.2 Appropriate adjustments to ensure customer satisfaction is maintained are made decisively and promptly, and as an accurate reflection of company procedures
	2.3 Resource requirement changes are organised in advance wherever and whenever possible in accordance with company procedures
	2.4 Negative impact events and factors are promptly identified and actions are taken to minimise effect and to prevent recurrence
	2.5 Peer coaching and mentoring support is provided to assist colleagues to meet and enhance company customer service standards
3 Seek information from customers and staff	3.1 Regular feedback on service quality is sought and obtained from internal and external customers using a variety of data collection methods
	3.2 Customers and colleagues are encouraged to comment on continuous improvement methods implemented, to ensure service excellence
	3.3 Customer and colleague feedback is acknowledged and followed up as appropriate

- | | | |
|---|-----|---|
| 4 Develop approaches to enhance customer service | 4.1 | Customer quality service initiatives are identified and forwarded to appropriate personnel |
| | 4.2 | Customer service performance information is communicated clearly with colleagues |
| | 4.3 | Participation in developing new approaches or initiatives to customer service is undertaken |
| 5 Encourage staff to take responsibility for customer service problems | 5.1 | Coaching and support is provided to assist colleagues in handling difficult customer situations |
| | 5.2 | Responsibility for service delivery and customer satisfaction is taken |
| | 5.3 | Customer service relationship development opportunities are discussed with team members |
| | 5.4 | Appropriate responses are made to team member suggestions in a timely manner |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVII4015A Monitor and enhance customer service excellence.

Assessment Requirements for AVII4015 Monitor and enhance customer service excellence

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- handling customer queries and complaints effectively
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS)/occupational health and safety (OHS) and security procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying any problems, faults or malfunctions promptly, in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment conforming to industry and WHS/OHS standards
- using interpersonal skills effectively
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- writing simple reports and records of inquiries.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- airline company customer service principles and philosophies
- airline company structure, products, services, policies and procedures
- customer service, quality and continuous improvement principles, policies and procedures
- feedback and coaching techniques
- leadership principles
- legal issues that relate to quality service management
- relevant duty of care responsibilities
- relevant WHS/OHS and environmental procedures and regulations
- resource management (human and financial)
- sources of information and documentation needed for workplace operations
- types of operations carried out in the workplace concerned
- workplace procedures relevant to work activities.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

AVIJ0001 Contribute to the achievement of on-time performance standards

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to contribute to the achievement of on-time performance standards in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes contributing to on-time performance, identifying and minimising potential causes of flight delays, and taking action in unavoidable flight delays.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to quality procedures of aviation personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

J – Quality

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Contribute to on-time performance

- 1.1 Procedures and checklists to facilitate on-time performance are closely followed when carrying out work activities
- 1.2 Work activities in preparation for flight departure are commenced on time and are conducted efficiently and effectively in accordance with workplace procedures
- 1.3 Appropriate assistance is provided to others to overcome problems and to achieve on-time performance targets

2 Identify and minimise potential causes of flight delays

- 2.1 Potential causes of delays to flight departure arising within area of responsibility are promptly identified and communicated to relevant personnel
- 2.2 Safe action to minimise or eliminate potential causes of delays is determined and taken in conjunction with relevant staff in accordance with workplace procedures
- 2.3 Supervisors and other relevant staff are advised of potential problems and action taken to address them and/or to avoid potential delays

3 Take action in unavoidable flight delays

- 3.1 Appropriate safe action is taken in conjunction with other staff to make up lost time and to enable aircraft on-time departure, where unavoidable delays in preparing for flight departure have been experienced
- 3.2 Action being taken to make up lost time due to unavoidable problems is communicated to passengers, supervisors and other relevant staff in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work

environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIJ2001 Contribute to the achievement of on-time performance standards.

Assessment Requirements for AVIJ0001 Contribute to the achievement of on-time performance standards

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- overcoming delays, including:
 - accelerating other pre-departure activities
 - accessing additional staff
 - assisting staff as required
 - developing and implementing appropriate strategies to overcome or minimise a specific delay
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others

- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- pertinent sections of relevant regulations
- potential causes of flight delays that may occur when preparing for aircraft departure and appropriate action that should be taken in each case
- principles of customer service and on-time performance
- procedures for relevant workplace activities carried out in preparation for flight departure
- relevant customs, quarantine, equal opportunity and anti-discrimination regulations
- relevant WHS and environmental protection regulations
- roles and responsibilities of staff involved in achieving on-time performance standards
- unlawful interference with aviation, including:
 - definitions
 - individual actions and responsibilities
- workplace standards for on-time performance.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIJ0002 Conduct quality control operations related to refuelling and defuelling aircraft

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to conduct quality control operations related to refuelling and defuelling aircraft in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes taking samples from dispensers/fuellers, conducting a visual check of fuel samples, testing membrane filtration (millepore sampling) and measuring pressure differential on filter vessels.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to quality control operations of ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

J – Quality

Unit Sector

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--|--|
| 1 Conduct dispenser sampling processes | <p>1.1 Fuel samples are taken from dispenser for visual testing at the commencement of routine operations in accordance with workplace procedures and regulatory requirements</p> <p>1.2 Fuel samples are taken from dispenser for visual testing during fuelling operations in accordance with workplace procedures and regulatory requirements</p> |
| 2 Conduct fueller sampling processes | <p>2.1 Fuel samples are taken from fueller for visual testing at the commencement of routine operations and during fuelling operations in accordance with workplace procedures and regulatory requirements</p> <p>2.2 Additional samples are taken from fueller after defuelling operations, vehicle washing, maintenance and rain events</p> |
| 3 Conduct visual check of fuel samples | <p>3.1 Fuel sample is inspected and colour identified and interpreted to determine grade of fuel in accordance with workplace procedures and established colour criteria</p> <p>3.2 Sample is inspected for free water and dirt particles in accordance with workplace procedures and established manual or automated processes</p> <p>3.3 Water detector capsules are used to check for suspended water in accordance with manufacturer instructions and workplace procedures</p> <p>3.4 Results of visual checks are recorded and reported in accordance with workplace procedures and regulatory requirements</p> |
| 4 Test membrane filtration (millepore sampling) | <p>4.1 Hydrant dispenser vehicle is positioned at test rig and is interlocked/chocked in accordance with workplace procedures</p> <p>4.2 Fuellers are tested independent of test rig by circulating product through delivery hose back to tank to achieve required flow rates</p> |

- 4.3 Bonding leads are attached in accordance with workplace procedures
 - 4.4 Fueller/dispenser delivery hoses are connected to achieve a flow rate of at least 50% of rated flow of filter
 - 4.5 Hydrant dispenser lanyard is connected to pit valve and inlet hose is connected in accordance with workplace procedures
 - 4.6 Colorimetric capsule is loaded in accordance with manufacturer instructions and workplace procedures
 - 4.7 Checks are made to ensure capsule is located in housing with millepore monitor inlet facing upstream
 - 4.8 Apparatus is connected to filter outlet millepore sample connection or nozzle millepore sample point
 - 4.9 Pressure and flow rate are adjusted to workplace specifications
 - 4.10 Apparatus is flushed
 - 4.11 Colorimetric test samples are drawn monthly in accordance with sampling schedules
 - 4.12 Gravimetric and microbiological tests are drawn every three months in accordance with sampling schedules, ensuring that initial sample is drawn for gravimetric test then gravimetric capsule is replaced with microbiological capsule, and another sample is drawn in accordance with workplace procedures
 - 4.13 Apparatus is disconnected and capsule is removed
 - 4.14 Gravimetric and microbiological samples are labelled and dispatched to laboratory in accordance with workplace procedures
 - 4.15 Colorimetric assessment is conducted in accordance with manufacturer instructions and workplace procedures
 - 4.16 Test results are documented in accordance with workplace procedures and regulatory requirements
- 5 Measure pressure differential on filter**
- 5.1 Gauge is checked in accordance with manufacturer instructions and workplace procedures

vessels

- 5.2 Flow through vessel into aircraft or test rig is started in accordance with workplace procedures
- 5.3 Pressure differential at maximum flow rate obtained is read
- 5.4 Results are analysed and recorded in accordance with workplace procedures and regulatory requirements
- 5.5 Where differential pressure exceeds filter manufacturer recommended differential pressure at flow rates above 50% of the maximum rated flow of filter vessel, situation is reported immediately to supervisor for investigation in accordance with workplace procedures and regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIJ4002 Conduct quality control operations related to refuelling and defuelling aircraft.

Assessment Requirements for AVIJ0002 Conduct quality control operations related to refuelling and defuelling aircraft

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards related to fuel handling procedures
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- aircraft fuelling/defuelling operations quality control principles and processes
- conduct of dispenser sampling processes
- conduct of fueller sampling processes
- conduct of visual check of fuel samples
- correct fitment and wearing of required safety and PPE, including:
 - approved uniform/clothing
 - gloves
 - hearing protection
 - high visibility clothing
 - mask or respirator
 - safety glasses
 - safety headwear and footwear
 - safety vest
- manufacturer instructions for equipment used in quality control processes
- membrane filtration testing (millepore sampling) procedures
- problems that may occur when conducting aircraft refuelling/defuelling quality control operations and appropriate action that should be taken in each case
- relevant WHS and environmental procedures and regulations
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders and other regulations for aircraft refuelling and defuelling quality control processes carried
- risks that exist when conducting aircraft refuelling/defuelling quality control operations and related risk control procedures and precautions
- workplace procedures for conducting aircraft refuelling and defuelling quality control operations.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

- relevant materials, tools, equipment and PPE currently used in industry.

AVIL0002 Manage shifts, crewing and rostering activities in aviation

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to manage shifts, crewing and rostering activities in aviation in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes preparing to manage shifts, crewing and rostering, establishing crew resourcing framework, managing the development of crew rosters, and monitoring crew rosters.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to resource management duties of flight or ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Prepare to manage shifts, crewing and rostering | <p>1.1 Operational timetables and schedules are identified and kept updated within roster operations</p> <p>1.2 Shifts and schedules are identified for routine and unplanned services to ensure routine and contingency crewing requirements can be met</p> <p>1.3 Procedures to identify set workings or work tasks to be performed are identified and implemented</p> <p>1.4 Potential operational problems and their impact on crewing needs are identified and contingency plans developed</p> |
| 2 Establish crew resourcing framework | <p>2.1 Individual fitness for work requirements are identified and confirmed as appropriate for crewing requirements</p> <p>2.2 Fatigue risk management requirements are identified and taken into consideration when establishing shifts and rosters</p> <p>2.3 Crew qualifications and regulated competency requirements are identified and systems to monitor their ongoing currency are used</p> <p>2.4 Organisational and workplace requirements are identified and strategies to manage them are developed and implemented</p> |
| 3 Manage the development of crew rosters | <p>3.1 Established regulatory, organisational and workplace requirements are met in developing crew shifts and rosters</p> <p>3.2 Strategies that allow sufficient flexibility to allow contingency plans to be implemented are identified, developed and applied</p> <p>3.3 Procedures are put in place to ensure rosters are circulated in accordance with organisational policies and procedures</p> <p>3.4 Mechanisms are put in place to receive and address feedback from rostered personnel, and to identify and act on acceptable modifications</p> <p>3.5 Procedures for documenting and distributing finalised</p> |

crew rosters to appropriate personnel are established and implemented

- 4 Monitor crew rosters**
- 4.1** Crew rostering is reviewed at appropriate times to ensure it meets current and future regulatory and organisational requirements
 - 4.2** Issues with crew rostering are identified and addressed in accordance with regulatory and organisational requirements
 - 4.3** Crew rosters are revised and disseminated as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIL0001 Manage shifts, crewing and rostering activities in aviation.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIL0002 Manage shifts, crewing and rostering activities in aviation

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified fatigue risk hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying any problems, fault or malfunctions promptly in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- solving problems associated with managing shifts, crewing and rostering activities
- using hardware systems to manage crew rosters
- using software systems to manage crew rosters
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- documentation and reporting requirements for developing crew rosters
- fatigue risk management policies, including:
 - hazard identification
 - risk assessments
 - mitigation strategies
 - training and education programs
 - fatigue monitoring
 - continuous monitoring
- individual workplace procedures and policies for developing crew rosters
- operations manuals, job specifications and induction documentation
- problems that may occur when developing crew rosters and appropriate action that can be taken to resolve these problems
- regulatory and organisational requirements, and aviation/transport safety systems relevant to developing crew rosters
- relevant legislations and regulations in relation to:
 - conditions of service, award, enterprise bargaining agreement and other industrial arrangements
 - privacy
- shift crewing and rostering quality assurance procedures
- WHS and environmental protection legislation
- workplace relations and equal employment opportunity policies.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment

- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIL0003 Manage a check-in queue

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to manage a check-in queue in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes organising a queue, combing a queue for passengers requiring urgent service, providing information and special assistance to passengers in a queue, and responding to queries from queued passengers.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to resource management duties of aviation personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Organise queue | <p>1.1 Queue is organised using appropriate signage, barriers and other resources in accordance with workplace procedures</p> <p>1.2 Breaches of queue protocol are identified and appropriate action taken to advise passengers concerned of service procedures to be followed</p> <p>1.3 Queue progress is monitored and appropriate action taken to adjust servicing resources or to reorganise queue in situations where queue becomes excessively long, short or requires reorganisation due to late boarding passengers</p> |
| 2 Comb queue for passengers requiring urgent or express service | <p>2.1 Queue is combed at appropriate times to identify passengers who have priority need for rapid check-in in accordance with workplace procedures</p> <p>2.2 Passengers identified as having priority need for check-in are moved to head of the queue</p> <p>2.3 Passengers without baggage are directed to proceed to express check-in or gate customer service desk</p> <p>2.4 Appropriate explanations are provided to other passengers in queue about reasons for priority service</p> |
| 3 Provide information and assistance to passengers in queue | <p>3.1 Passengers are provided with relevant information on queuing arrangements and boarding progress using public address systems and other communications systems in accordance with workplace procedures</p> <p>3.2 Information is provided to individual passengers on matters relevant to their check-in</p> <p>3.3 Passengers are provided appropriate information on delays and cancelled or re-organised flight progress using public address systems and other communications systems in accordance with workplace procedures</p> <p>3.4 Passengers who require specific assistance are identified and assisted as required in accordance with workplace procedures</p> |
| 4 Respond to queries from queue members | <p>4.1 Queries from passengers in a queue are received and interpreted in accordance with workplace customer</p> |

service standards

- 4.2 Appropriate responses are given to passenger enquiries in accordance with workplace procedures
- 4.3 Passenger queries requiring detailed knowledge or additional information are referred to an appropriate supervisor or other staff for appropriate action

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIL2001 Manage a check-in queue.

Links

Assessment Requirements for AVIL0003 Manage a check-in queue

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- using queuing resources, including:
 - fixed barriers
 - portable barriers
 - public address systems
 - queuing carpets
 - signs
 - two-way radios and mobile phones
- working collaboratively with others

- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- airline standards and procedures for managing a check-in queue
- baggage check-in limits and requirements
- passenger identification requirements
- principles of customer service
- problems that may occur when communicating with passengers during check-in procedures and appropriate action that should be taken in each case
- relevant equal opportunity and anti-discrimination regulations
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders for passenger handling and check-in procedures
- relevant WHS procedures and regulations
- resources and equipment used during queue management, including:
 - fixed barriers
 - portable barriers
 - public address systems
 - queuing carpets
 - signs
 - two-way radios and mobile phones
- risks that exist when communicating with passengers during check-in procedures and related risk control procedures and precautions
- workplace procedures for providing appropriate assistance and advice to passengers awaiting check-in for an aircraft flight.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIL0004 Complete aircraft dispatch duties

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to complete aircraft dispatch duties in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes boarding passengers, communicating with flight crew and dispatching aircraft.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to resource management duties of ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

1 Board passengers

- 1.1** Hazards are identified, risks are assessed and hazard management implemented
- 1.2** On boarding announcement, passengers are greeted at the gate and their boarding passes are checked manually or electronically
- 1.3** Passenger details are added to passenger list, loading sheet and their boarding pass in accordance with manual processes
- 1.4** Passenger boarding pass is returned on confirmation in accordance with computerised processes
- 1.5** Appropriate action is taken in consultation with passenger to resolve boarding pass problems
- 1.6** Passenger is referred to appropriate customer service staff when boarding pass problem cannot be readily resolved
- 1.7** Passenger cabin baggage is monitored for size and weight and is checked with the aid of a cabin baggage size gauge
- 1.8** Passenger is advised oversize/overweight cabin baggage must be carried in the hold and arrangements are made to have baggage appropriately tagged and transferred to baggage handling section
- 1.9** Passengers are directed to aircraft via aerobridge/aircraft stairs in accordance with type of aircraft and airport facility

2 Communicate with flight crew

- 2.1** Appropriate communications are maintained with senior cabin/flight crew on aircraft to facilitate smooth and timely boarding of passengers
- 2.2** Printouts or manually-completed passenger list, manifest, load sheet and special meals list are provided to senior cabin/flight crew on aircraft in accordance with workplace procedures
- 2.3** Once provisional load sheet has been signed by pilot in command (PIC), a copy is retained in accordance with workplace procedures

- 3 Dispatch aircraft**
- 3.1** On closing of aircraft door, authority is given to retract aerobridge/stairs
 - 3.2** Aircraft dispatch problems are identified, confirmed and resolved in accordance with workplace procedures and regulatory requirements
 - 3.3** Appropriate people are consulted during aircraft dispatch operations
 - 3.4** Copies of passenger list and load sheet are processed/filed in accordance with workplace procedures and regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIL3002 Complete aircraft dispatch duties.

Assessment Requirements for AVIL0004 Complete aircraft dispatch duties

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others when completing aircraft dispatch duties
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include

knowledge of:

- aircraft dispatch problems and appropriate action that should be taken in each case, including:
 - cancellation of flight
 - crew rest seat no longer available
 - failed-to-board passengers
 - incidents classified as unlawful interference with aviation
 - malfunctioning aircraft
 - need to wait for passengers from a connecting flight
 - passengers who have lost their boarding pass
 - passengers with oversize/overweight cabin baggage
 - seating problem, such as non-notified seat changes or an accidental double booking
 - security alert
- airline on-time performance standards
- baggage check-in limits and requirements
- check-in records/documentation
- methods to identify and resolve unlawful interference with aviation relevant to aircraft dispatch duties, including:
 - causing damage to an aircraft that is in service that puts the safety of the aircraft, or any person on board or outside the aircraft, at risk
 - committing an act at an airport, or causing any interference or damage, that puts the safe operation of the airport, or the safety of any person at the airport, at risk
 - destroying an aircraft that is in service
 - doing anything on board an aircraft that is in service that puts the safety of the aircraft, or any person on board or outside the aircraft, at risk
 - placing, or causing to be placed, on board an aircraft that is in service anything that puts the safety of the aircraft, or any person on board or outside the aircraft, at risk
 - putting the safety of an aircraft at risk by communicating false or misleading information
 - putting the safety of aircraft at risk by interfering with, damaging or destroying air navigation facilities
 - taking control of an aircraft by force, or threat of force, or any other form of intimidation or by any trick or false pretence
- policies and procedures concerning oversize/overweight cabin baggage
- principles of customer service
- procedures for assisting passengers with specific needs
- relevant customs, quarantine, equal opportunity and anti-discrimination regulations
- relevant personnel to consult during dispatch, including:
 - aircraft resourcing staff
 - baggage handling staff
 - customer service manager on aircraft
 - ground support staff
 - other cabin crew and flight crew members

- passengers
- pilot in command (PIC)
- supervisors and managers
- technical staff
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders for passenger handling and aircraft dispatch procedures
- relevant WHS, hygiene and environmental procedures and regulations
- risks that exist when completing aircraft dispatch duties and related risk control procedures and precautions
- workplace standards and procedures for completing aircraft dispatch duties.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIL0005 Plan an aircraft load

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to plan an aircraft load in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes gathering data on aircraft load, reviewing and analysing data, preparing load plans, and completing and processing required documentation.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to resource management duties of flight or ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Gather data on aircraft load

1.1 Data required to plan aircraft load is collected using appropriate techniques and technology in accordance with workplace procedures and regulatory requirements

1.2 Relevant people are consulted about acceptance of freight for air transport

1.3 Types of freight to be transported are identified in accordance with workplace procedures and regulatory requirements

2 Review and analyse data

2.1 Collected data is reviewed using manual or computer techniques in accordance with workplace procedures and regulatory requirements

2.2 Appropriate consideration of aircraft destination, time, weather, duration of flight, mix of load, aircraft fuel weight and other relevant parameters is included in analysis of data

3 Prepare load plan

3.1 An appropriate load plan is prepared using manual or computerised techniques for aircraft concerned in accordance with workplace procedures, aircraft loading manual and relevant regulatory requirements

3.2 Hazards are identified, risks are assessed and hazard management implemented

3.3 Aircraft trim and balance requirements are provided for in prepared load plan in accordance with the relevant aircraft loading manual

4 Complete and process required documentation

4.1 Relevant documentation is prepared and signed in accordance with workplace procedures and regulatory requirements

4.2 Documentation is processed and dispatched to relevant personnel in accordance with workplace procedures, local airport instructions and relevant regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIL3003 Plan an aircraft load.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIL0005 Plan an aircraft load

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant aeronautical knowledge
- applying relevant legislation and workplace procedures
- communicating effectively with others
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- types of freight, including:

- allowable dangerous goods
- diplomatic items
- fragile goods
- general freight
- hazardous materials
- human remains
- live freight
- loose freight
- mail/express
- passenger baggage
- perishable goods
- valuables
- aircraft load characteristics, including:
 - density
 - marking and labelling
 - restraint criteria required
 - segregation requirements
 - size
 - weight
- aircraft load planning factors, including:
 - aircraft load capacity allowable
 - centre of gravity
 - emergency exits and safety equipment access
 - cargo loading order
 - hazardous materials and dangerous goods
- characteristics and ways of identifying various types of dangerous goods
- documentation requirements for transporting appropriate dangerous goods by air
- problems that may occur when planning an aircraft load and appropriate action that should be taken in each case
- relevant WHS and environmental procedures and regulations
- relevant international, national and enterprise regulatory requirements for transporting dangerous goods by air
- hazards, including:
 - contamination of, or from, materials being handled
 - dust/vapours
 - hazardous or dangerous materials
 - spill, leakages and ruptures
- relevant people, including:
 - customers
 - dangerous goods experts and advisors

- experts and advisors on transporting animals and livestock
- experts on other special categories of air freight
- flight crew
- other members of the work team/s
- perishable goods experts and advisors
- supervisors and managers
- technical staff
- risks that exist when planning an aircraft load and related risk control procedures and precautions
- safety principles for planning an aircraft load
- workplace procedures for planning an aircraft load.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIL0006 Assess pavement concessions

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to assess pavement concessions in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes receiving and evaluating requests for pavement concession, conducting an analysis of overload significance, and communicating and documenting the outcomes of a pavement concession request.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to resource management duties of ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Receive a request for pavement concession	<p>1.1 Request for a pavement concession for a specific airport is received from an aircraft operator and interpreted in accordance with workplace procedures and regulatory requirements</p> <p>1.2 Airport pavement classification number for the airport concerned is established through reference to En Route Supplement Australia (ERSA)</p>
2 Evaluate a request for pavement concession	<p>2.1 Specifications for aircraft concerned are accessed and interpreted to establish aircraft classification number</p> <p>2.2 Comparison is made between airport pavement classification number and aircraft classification number</p> <p>2.3 Where aircraft classification number is less than or equal to airport pavement classification number, pavement concession is issued</p> <p>2.4 Where aircraft classification number is more than airport pavement classification number, a more detailed analysis of overload significance is carried out in accordance with workplace procedures and regulatory requirements</p>
3 Conduct an analysis of overload significance	<p>3.1 Relevant information required for an assessment of overload significance of pavement concession request is obtained from relevant sources</p> <p>3.2 Reference is made to pavement concession manual to conduct an assessment of overload significance</p> <p>3.3 Hazards are identified, risks are assessed and hazard management implemented</p> <p>3.4 Potential impact of pavement overload is established and an appropriate decision made to either issue a concession, decline a concession or issue a conditional concession, in accordance with workplace procedures and regulatory requirements</p>
4 Communicate outcomes of a pavement concession request	<p>4.1 Outcomes of decision on a pavement concession request is communicated to aircraft operator in accordance with workplace procedures and regulatory requirements</p> <p>4.2 Details of conditional concessions issued are</p>

communicated to operator in accordance with workplace procedures and regulatory requirements

5 Document outcomes of a pavement concession request

5.1

Outcomes of decision on a pavement concession request, including details of applicable conditions, are documented in accordance with workplace procedures and regulatory requirements

5.2

Documented pavement concession request decisions are filed and processed in accordance with workplace procedures and regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIL3004 Assess pavement concessions.

Assessment Requirements for AVIL0006 Assess pavement concessions

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified pavement concession hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include

knowledge of:

- aerodrome operating procedures
- aircraft specifications
- problems that may occur when assessing requests for pavement concessions and action that should be taken in each case
- relevant information required for an assessment of overload significance of a pavement concession request, including:
 - aircraft tyre pressure
 - aircraft weight
 - frequency of aircraft operations at airport concerned
 - pavement temperature at airport concerned
 - time of aircraft arrival
- procedures for assessing a request for a pavement concession
- conditions on a concession, including:
 - following specified routes when taxiing at airport concerned
 - operating and parking in restricted areas of airport concerned
 - operating on lower tyre pressures
 - turning on a particular node
- relevant WHS and environmental procedures and regulations
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders for aerodrome operations and assessing pavement concessions
- relevant sections of En Route Supplement Australia (ERSA) for assessing requests for pavement concessions
- safety hazards and risks that exist when assessing requests for pavement concessions, and related risk control procedures and precautions.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment

- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVILIC0003 Licence to operate a commercial aeroplane

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to obtain a commercial pilot licence (aeroplane) in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It addresses the following competency standards in the Civil Aviation Safety Regulations (CASRs) Part 61 Manual of Standards Instrument:

Common standards

- communicating in the aviation environment
- perform pre- and post-flight actions and procedures
- operate aeronautical radio
- manage fuel
- manage passengers and cargo
- non-technical skills 1 (manage a safe flight)
- non-technical skills 2 (recognise, direct and manage threats and errors).

Navigation and instrument flying standards

- navigate aircraft
- radio navigation en route
- full instrument panel manoeuvres
- limited instrument panel manoeuvres
- operate at a controlled aerodrome
- operate at non-towered aerodromes
- operate in controlled airspace
- operate in Class G airspace.

Aircraft rating standards: aeroplane category

- control aeroplane on the ground
- take-off aeroplane
- control aeroplane in normal flight
- land aeroplane
- aeroplane advanced manoeuvres
- manage abnormal situations – single engine aeroplanes.

This unit addresses aviation non-technical skills and knowledge requirements (mental, social and personal-management abilities) for commercial pilots and contributes to safe and effective

performance in complex aviation operational environments.

This unit also addresses aviation technical skills and knowledge requirements (physical, mental and task-management abilities) related to commercial pilot duties and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial or military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

LIC – Licensing

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Communicate in an aviation environment

2 Perform pre- and post-flight actions and procedures

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Effective face-to-face communication techniques are applied in accordance with general English language principles

1.2 Aeronautical radio is operated using appropriate operational communication aviation phraseology and terminology

2.1 Pre-flight actions and procedures are completed

2.2 Pre-flight inspection is performed

- 2.3 Post-flight actions and procedures are completed
 - 3 **Operate aeronautical radio**
 - 3.1 Radio equipment is operated
 - 3.2 Radiotelephone equipment malfunctions are managed
 - 3.3 Aircraft transponder is operated during normal, abnormal and emergency situations
 - 4 **Manage fuel**
 - 4.1 Fuel plan requirements are determined
 - 4.2 Fuel system is managed
 - 4.3 Aircraft refuelling procedures are correctly completed
 - 5 **Manage passengers and cargo**
 - 5.1 Passengers are managed
 - 5.2 Passengers are aided and assisted as required
 - 5.3 Cargo is managed
 - 6 **Manage a safe flight**
 - 6.1 Effective lookout is maintained
 - 6.2 Situational awareness is maintained
 - 6.3 Situations are assessed and effective decisions made
 - 6.4 Task priorities are set and tasks managed
 - 6.5 Effective communications and interpersonal relationships are maintained
 - 7 **Recognise, direct and manage threats and errors**
 - 7.1 Threats are recognised and managed
 - 7.2 Errors are recognised and managed
 - 7.3 Undesired aircraft states are recognised and managed
 - 8 **Navigate aircraft**
 - 8.1 Documents and flight plans are prepared
 - 8.2 Airspace procedures are complied with while navigating
 - 8.3 Departure procedures are conducted
 - 8.4 Aircraft is navigated en route to waypoint or destination

- 8.5** Aircraft is navigated at low level and in reduced visibility
 - 8.6** Lost procedure is performed as required
 - 8.7** Diversion procedure is performed as required
 - 8.8** Instrument navigation systems are used to navigate under visual flight rules (VFR) or instrument flight rules (IFR)
 - 8.9** Arrival procedures are executed
- 9 Control aeroplane on the ground**
 - 9.1** Aircraft engine is started and stopped
 - 9.2** Aeroplane is taxied
- 10 Take-off aeroplane**
 - 10.1** Pre-take-off procedures are carried out
 - 10.2** Aeroplane take-off is conducted
 - 10.3** Cross-wind aeroplane take-off is conducted
 - 10.4** After take-off procedures are carried out
 - 10.5** Short field aeroplane take-off is performed using appropriate procedures
- 11 Control aeroplane in normal flight**
 - 11.1** Aeroplane is climbed
 - 11.2** Straight and level flight is maintained
 - 11.3** Aeroplane is descended
 - 11.4** Aeroplane is turned
 - 11.5** Aeroplane is controlled at slow speeds
 - 11.6** Aeroplane circuits and approaches are performed
 - 11.7** Local area airspace procedures are confirmed as required and applied
- 12 Land aeroplane**
 - 12.1** Aeroplane is landed
 - 12.2** Cross-wind aeroplane landing is conducted
 - 12.3** Missed approach is conducted

- 12.4** Recovery from missed landing is performed
- 12.5** Short field aeroplane landing is performed using appropriate procedures
- 13 Perform advanced manoeuvres**
- 13.1** Stall conditions are entered and recovered, including incipient spin, stall without power applied, stall from straight and level, stall in approach configuration, stall while turning, and stall with full power applied, or stall while climbing, or stall while descending
- 13.2** Incipient spin recovery is conducted
- 13.3** Aeroplane is turned steeply
- 13.4** Aeroplane is side-slipped, when permitted
- 14 Operate using full instrument panel**
- 14.1** Serviceability of flight instruments and instrument power sources is determined and monitored
- 14.2** Full instrument panel manoeuvres are performed
- 14.3** Upset situations and unusual aircraft attitude recovery is performed using full instrument panel
- 15 Operate using limited instrument panel**
- 15.1** Attitude indicator and stabilised heading indicator failures are recognised
- 15.2** Limited instrument panel manoeuvres are performed
- 15.3** Upset situations and unusual aircraft attitude recovery is performed using limited instrument panel
- 15.4** Visual flight is re-established
- 16 Navigate using radio navigation aids and systems**
- 16.1** Radio navigation systems are operated and monitored
- 16.2** Aircraft is navigated using navigation aids and systems
- 17 Operate at non-towered aerodromes**
- 17.1** Preparations for non-towered aerodrome operations are conducted
- 17.2** Aircraft is taxied at non-towered aerodrome or landing area
- 17.3** Non-towered aerodrome or landing area departure is performed

- 17.4** Non-towered aerodrome or landing area arrival is performed
- 18 Operate in Class G airspace**
- 18.1** Aircraft is operated in Class G airspace
- 18.2** Appropriate tolerances are applied and maintained
- 18.3** Aircraft radio procedures are implemented as required
- 18.4** Operations are conducted in accordance with suitable charts
- 18.5** Appropriate actions are performed in abnormal operations and emergencies
- 19 Operate at a controlled aerodrome**
- 19.1** Preparations for controlled aerodrome operations are conducted
- 19.2** Aircraft is taxied at controlled aerodrome
- 19.3** Controlled aerodrome departure is performed
- 19.4** Controlled aerodrome arrival and landing are performed
- 20 Operate in controlled airspace**
- 20.1** Aircraft is operated in controlled airspace
- 20.2** Airways clearance requirements are complied with
- 20.3** Tracking and altitude tolerances are maintained when operating on an airway clearance
- 20.4** Separation standards are applied between instrument and visual flights within controlled airspace
- 20.5** Appropriate abnormal and emergency response actions are implemented as required
- 20.6** Air traffic control (ATC) directions, instructions and requirements are adhered to within controlled airspace

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVILIC0001 Licence to operate a commercial aeroplane.

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVILIC0003 Licence to operate a commercial aeroplane

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and on at least one occasion and include:

- applying competence as a commercial pilot within flight tolerance standards specified by the appropriate licence authority
- applying competence in an aeroplane capable of the following characteristics:
 - cruise true airspeed of not less than 120 knots
 - fitted with one of the following powerplants:
 - turbine engine with propeller
 - piston engine with variable pitch propeller
- conducting airspace operations in:
 - class G airspace
 - controlled aerodrome
 - controlled airspace
 - non-towered aerodrome.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aircraft loading systems
- aircraft performance and landing calculations
- aircraft speed limitations
- aircraft systems
- applicability of drug and alcohol regulations
- classification of operations
- commercial pilot licence (CPL) maintenance authorisations
- day visual flight rules (VFR) commercial aircraft instrument requirements
- emergency equipment requirements
- flight and duty time limits

- fuel planning and oil requirements for the flight
- global navigation satellite system (GNSS) and its use in VFR navigation
- loading and unloading fuel
- managing cargo and passengers
- normal and non-normal operation of the propeller system fitted to flight test aeroplane
- privileges and limitations of a CPL with aeroplane category rating
- requirements for an Air Operator's Certificate (AOC)
- requirements for landing areas and aerodromes
- type of information contained in an operations manual.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVILIC0004 Licence to operate a commercial helicopter

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to obtain a commercial pilot licence (helicopter) in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It addresses the following competency standards in the Civil Aviation Safety Regulations (CASRs) Part 61 Manual of Standards Instrument:

Common standards

- communicating in the aviation environment
- perform pre- and post-flight actions and procedures
- operate aeronautical radio
- manage fuel
- manage passengers and cargo
- non-technical skills 1 (manage a safe flight)
- non-technical skills 2 (recognise, direct and manage threats and errors).

Navigation and instrument flying standards

- radio navigation – en route
- full instrument panel manoeuvres
- limited instrument panel manoeuvres
- operate at a controlled aerodrome
- operate at non-towered aerodrome
- operate in controlled airspace
- operate in Class G airspace.

Aircraft rating standards: helicopter category

- control helicopter on the ground
- control helicopter in lift-off, hover and landing
- taxi helicopter
- take-off helicopter and approach to hover
- control helicopter in normal flight
- control helicopter during advanced manoeuvres
- manage abnormal situations and emergencies – helicopter.

This unit addresses aviation non-technical skills and knowledge requirements (mental, social and personal-management abilities) related to commercial pilot duties and contributes to safe and

effective performance in complex aviation operational environments.

This unit addresses aviation technical skills and knowledge requirements (physical, mental and task-management abilities) related to commercial pilot duties and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial or military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Communicate in an aviation environment

2 Perform pre- and post-flight actions and procedures

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Effective face-to-face communication techniques are applied in accordance with general English language principles

1.2 Aeronautical radio is operated using appropriate operational communication aviation phraseology and terminology

2.1 Pre-flight actions and procedures are completed

2.2 Pre-flight inspection is performed

- 2.3** Post-flight actions and procedures are completed
- 3 Operate aeronautical radio**
 - 3.1** Radio equipment is operated
 - 3.2** Radiotelephone equipment malfunctions are managed
 - 3.3** Aircraft transponder is operated during normal, abnormal and emergency situations
- 4 Manage fuel**
 - 4.1** Fuel plan requirements are determined
 - 4.2** Fuel system is managed
 - 4.3** Aircraft refuelling procedures are correctly completed
- 5 Manage passengers and cargo**
 - 5.1** Passengers are managed
 - 5.2** Passengers are aided and assisted as required
 - 5.3** Cargo is managed
- 6 Manage a safe flight**
 - 6.1** Effective lookout is maintained
 - 6.2** Situational awareness is maintained
 - 6.3** Situations are assessed and effective decisions made
 - 6.4** Task priorities are set and tasks managed
 - 6.5** Effective communications and interpersonal relationships are maintained
- 7 Recognise, direct and manage threats and errors**
 - 7.1** Threats are recognised and managed
 - 7.2** Errors are recognised and managed
 - 7.3** Undesired aircraft states are recognised and managed
- 8 Navigate aircraft**
 - 8.1** Documents and flight plans are prepared
 - 8.2** Airspace procedures are complied with while navigating
 - 8.3** Departure procedures are conducted
 - 8.4** Aircraft is navigated en route to waypoint or destination

- 8.5** Aircraft is navigated at low level and in reduced visibility
 - 8.6** Lost procedure is performed as required
 - 8.7** Diversion procedure is performed as required
 - 8.8** Instrument navigation systems are used to navigate under visual flight rules (VFR) or instrument flight rules (IFR)
 - 8.9** Arrival procedures are executed
- 9 Control helicopter on the ground**
 - 9.1** Engine is started and stopped
 - 9.2** Rotor is engaged and stopped
 - 9.3** Main rotor disc and anti-torque system are controlled
- 10 Control helicopter in lift-off, hover and landing**
 - 10.1** Aircraft is lifted off to hover and hover checks are performed
 - 10.2** Helicopter is hovered in cross and tail wind conditions
 - 10.3** Turns around the mast are performed
 - 10.4** Turns around the nose and tail are performed
 - 10.5** Sideways and backwards flight manoeuvres are performed
 - 10.6** Aircraft is landed from the hover
 - 10.7** Mishandled landings are managed
 - 10.8** Mishandled lift offs are managed
- 11 Taxi helicopter**
 - 11.1** Air taxiing manoeuvres are performed
 - 11.2** Air transiting manoeuvres are performed
- 12 Take-off helicopter and approach to hover**
 - 12.1** Pre-take-off checks are carried out
 - 12.2** Aircraft take-off is performed
 - 12.3** Approach to hover is performed

- 12.4** Go-around procedure is performed
- 13 Control helicopter in normal flight**
- 13.1** Helicopter is climbed while maintaining indicated airspeed (IAS) for cruise climb and best angle of climb (V_x) or best rate of climb (V_y)
- 13.2** Straight and level flight is maintained
- 13.3** Helicopter in descent is conducted under varying combinations of direction, speed and aircraft configuration
- 13.4** Helicopter is turned from a known heading to a nominated heading, track or geographical feature
- 13.5** Helicopter is controlled at any speed within approved flight envelope
- 13.6** Helicopter circuits and approaches are performed
- 13.7** Airspace requirements are complied with
- 14 Control helicopter during advanced manoeuvres**
- 14.1** Helicopter is turned steeply through level flight and descending flight profiles
- 14.2** Autorotative flight is performed
- 14.3** Helicopter is landed on and lifted off sloping ground
- 14.4** Helicopter is landed, manoeuvred and taken off within confined areas
- 14.5** Limited power take-off, approach and landings are executed
- 15 Manage abnormal situations and emergencies**
- 15.1** Forced landing from level flight, after take-off or on approach is managed
- 15.2** Engine failure at the hover or during taxi is managed
- 15.3** Tail rotor malfunction is managed
- 15.4** Jammed flight control system is managed
- 15.5** Flight in adverse aerodynamic conditions is managed
- 15.6** Helicopter operating system malfunction is managed

- | | |
|--|---|
| 16 Operate using full instrument panel | 16.1 Serviceability of flight instruments and instrument power sources is determined and monitored |
| | 16.2 Full instrument panel manoeuvres are performed |

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVILIC0004 Licence to operate a commercial helicopter

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying competence as a commercial pilot within flight tolerance standards specified by the appropriate licence authority
- conducting airspace operations in:
 - class G airspace
 - controlled aerodrome
 - controlled airspace
 - non-towered aerodrome.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aircraft loading systems
- aircraft performance and landing calculations
- aircraft speed limitations
- aircraft systems
- applicability of drug and alcohol regulations
- classification of operations
- commercial pilot licence (CPL) maintenance authorisations
- day visual flight rules (VFR) commercial aircraft instrument requirements
- emergency equipment requirements
- flight and duty time limits
- fuel planning and oil requirements for the flight
- global navigation satellite system (GNSS) and its use in VFR navigation
- loading and unloading fuel
- managing cargo and passengers
- privileges and limitations of a CPL with helicopter category rating
- requirements for an Air Operator's Certificate (AOC)

- requirements for landing areas and aerodromes
- type of information contained in an operations manual.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIM0003 Conduct aeronautical knowledge training and flight training

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to conduct aeronautical knowledge training and flight training in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes planning training, conducting aeronautical knowledge training and conducting pre-flight briefings. It also includes conducting airborne training, conducting post-flight briefings and completing post-training administration.

This unit addresses aviation non-technical skill requirements (mental, social, and personal-management abilities) for flight instructor personnel that complement the technical skills of the individual and contributes to safe and effective performance in flight training environments.

Flight instruction operations are conducted as part of recreational, commercial and/or military activities across a variety of operational contexts within the Australian aviation industry.

Work may be performed independently or under limited supervision as a single instructor or within a multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Flight training for licences and ratings is conducted under a Part 141 or Part 142 operator certificate with the relevant training specification in accordance with holder's operations manual.

Pre-requisite Unit

Not applicable.

Competency Field

M – Training and Assessment

Unit Sector

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Plan training

- 1.1 Confirm trainee readiness for proposed training through review of training records to establish their competency status
- 1.2 Training objectives based on performance criteria are identified
- 1.3 Required knowledge is identified relevant to the instructional period to confirm trainee understanding
- 1.4 Appropriate training methods to facilitate training objectives and knowledge transfer are selected
- 1.5 Threat and error management (TEM) principles are applied within ground-based instructional periods
- 1.6 Potential threats and errors are identified within airborne instructional periods, including those associated with the simulation of abnormal or emergency procedures, aircraft mishandling by trainee, and identifying suitable mitigators
- 1.7 Appropriate ground, simulation or airborne training resources are selected
- 1.8 Availability and serviceability of required facilities, equipment, training aids, reference material and training aircraft or devices is confirmed

2 Conduct aeronautical knowledge training

- 2.1 Learning environment and motivation suitable to trainee characteristics is established
- 2.2 Materials are presented
- 2.3 Training objectives are stated

- 2.4** Lesson plan is followed and modified as required to achieve training objectives and to transfer of knowledge
- 2.5** New knowledge is linked to previous knowledge and is presented in a meaningful and logical framework
- 2.6** Training aids are used to illustrate and enhance explanations
- 2.7** Accurate technical knowledge is presented clearly and to the required standard
- 2.8** Opportunities for trainee participation and practise are provided
- 2.9** Applicable TEM issues are discussed
- 2.10** Trainee ability to apply TEM principles to the material presented is confirmed
- 2.11** Achievement of training objectives is confirmed by questioning, review and other suitable methods
- 2.12** Feedback on trainee performance is provided
- 2.13** Trainee self-assessment skills are developed

- 2.14** Training objectives are completed in time available
- 2.15** Training is conducted effectively and safely
- 3 Conduct pre-flight briefing**
- 3.1** Trainee mental and physical preparation for flight training is confirmed
- 3.2** Trainee knowledge required for flight exercise is checked
- 3.3** Trainee is briefed on training objectives, performance criteria and assessment requirements, and actions required during a flight
- 3.4** Trainee is briefed on how flight will be conducted to meet training objectives
- 3.5** TEM issues applicable to proposed flight are discussed with trainee and trainee responsibility for managing relevant TEM issues (airmanship) is confirmed
- 3.6** Trainee understanding of training outcomes, knowledge evidence relevant to outcomes, aircraft handling techniques and planned flight sequences is confirmed
- 4 Conduct airborne training**
- 4.1** Aircraft control handover/takeover procedures are explained and implemented
- 4.2** Instructions and explanations are provided in a clear, concise, systematic and timely manner

- 4.3 Tasks are introduced in manageable portions while being aware of trainee overload
 - 4.4 Tasks are demonstrated to trainee and performed to specified standards through coordinated control inputs, without abrupt manoeuvring, using accepted handling techniques and appropriate instructional techniques
 - 4.5 Trainee is directed through task performance using appropriate levels of information, explanation and feedback consistent with trainee progress
 - 4.6 Trainee is monitored through task performance using appropriate levels of information, explanation and feedback consistent with trainee progress
 - 4.7 Segmented tasks are integrated progressively in accordance with established workplace procedures
 - 4.8 Interventions are made as required to assist trainee progress or to maintain flight safety
 - 4.9 Trainee is provided with sufficient opportunity to practise techniques through assisted and unassisted practice sequences
 - 4.10 Trainee cognitive load is assessed, monitored and managed throughout training sequences
- 5 Conduct post-flight briefing**
- 5.1 Trainee is encouraged to self-assess performance against the required performance criteria
 - 5.2 Significant details of the trainee's performance are described clearly and accurately, and the trainee's achievement assessed against the training outcomes for the lesson and associated performance criteria

- 5.3 Deficiencies in performance are identified and remedial actions and training suggested
 - 5.4 TEM issues encountered during flight training activities are discussed
 - 5.5 Trainee is briefed on the details of the next required training exercise if necessary
- 6 Complete post-training administration**
- 6.1 Achievement, or otherwise, of competency and any remedial training required are recorded and content of the next required training exercise identified
 - 6.2 Administration procedures required for issue of an endorsement or military equivalent are completed where applicable
 - 6.3 Relevant stakeholders are informed of the trainee's performance and results where required
 - 6.4 Effectiveness of training is reviewed and any adjustments to delivery, presentation and content for improvement are identified and discussed with appropriate stakeholders

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is not equivalent to AVIM5002 Conduct aeronautical knowledge training.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIM0003 Conduct aeronautical knowledge training and flight training

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- achieving transfer of knowledge and training objectives
- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- adhering to pilot in command (PIC) responsibilities
- anticipating the need for alternative actions
- applying appropriate level of responsibility for trainee progress and welfare
- applying crew resource management (CRM) principles applicable to flight training and the role of the instructor in assisting the trainee to develop these skills
- applying precautions and required action to minimise, control or eliminate identified training hazards
- applying relevant aeronautical knowledge
- applying situational awareness and methods of developing and monitoring trainee situational awareness skills in terms of:
 - monitoring current environmental factors
 - evaluating their possible effects on the flight
 - anticipating the need for alternative actions
 - assessing learning and performance
 - communicating effectively with others
 - completing relevant documentation
- conducting briefings and debriefings with a representative range of trainees
- conducting timely assessment of learning and performance
- debriefing significant details of trainee performance including any threat and error management (TEM) issues encountered
- demonstrating flight instructor role modelling
- demonstrating procedures and manoeuvres to the required skill level while giving effective flight instruction
- developing an appropriate lesson plan based on performance/assessment of training objectives
- developing an appropriate training plan that includes threat and error management (TEM)

- evaluating instructional effectiveness and developing strategies for continuous improvement
- identifying and correctly using relevant equipment
- identifying errors in performance of flight manoeuvres readily, and suggesting a variety of effective strategies for improvement
- identifying potential threats and errors, including those associated with simulation of abnormal or emergency procedures or aircraft mishandling by trainee, and planning suitable countermeasures
- implementing CRM principles in flight training and instructor role when assisting trainee to develop skills
- implementing handover/takeover procedures for control of aircraft
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- intervening as required to assist trainee progress or to maintain flight safety
- maintaining and reviewing assessment records and trainee progress
- maintaining levels of situational awareness and methods of developing and monitoring trainee situational awareness
- maintaining situational awareness while providing instruction
- managing an environment that fosters learning and performance
- modifying activities depending on workplace contingencies, situations and environments
- monitoring current environmental factors
- monitoring work activities in terms of planned schedule
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- recording and debriefing training events
- recording results for flight and post-flight administration in accordance with workplace procedures
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- reviewing and reflecting on instructional performance
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- adult learning principles
- adult learning issues
- application of instructional principles to airborne instruction

- appropriate use of scenario-based training in flight instruction
- application of risk management principles to emergency procedure simulations in flight
- attributes of effective learning outcomes:
 - achievable
 - observable
 - measurable
- advantages and disadvantages of guided discussion
- advantages and disadvantages of various teaching methods
- barriers to effective communication:
 - lack of common experience
 - confusion
 - abstractions
- behavioural (performance-based) outcomes and purpose in flight training
- communication process factors:
 - source
 - symbols
 - receiver
 - communication barriers
 - monitoring whether communication has been achieved
- CRM principles
- checklists for single pilot or multi-crew operations as required
- cognitive basis of airmanship, situational awareness, captaincy, prioritisation, load shedding and decision making
- common trainee errors and suggested suitable remedial instruction
- emergency procedures
- debriefing and feedback techniques
- effective use of a course of training, curricula/syllabus and lesson plans
- factors that hinder the learning process:
 - rationalisation
 - flight
 - aggression
 - resignation
 - stress levels and impact on learning
 - relationship between perception and understanding
 - positive and negative motivation
 - levels of learning
 - how rate of learning varies with practice
 - transfer and habit formation
 - reinforcement
- flight rules for flight instructor ratings:

- legislation
- privileges and limitations
- fundamentals of instructing, questioning, engaging and motivating learners
- how goal fixation affects good decision making
- how to develop the essential elements of behavioural outcomes:
 - performance (what has to be done)
 - performance criteria
 - conditions
- lesson planning and development:
 - aim/motivation/revision
 - outcomes
 - explanation of principles
 - explanation/demonstration of technique
 - TEM
 - practice
 - review
- learning domains:
 - cognitive (knowledge)
 - affective (attitudes, beliefs and values)
 - psychomotor (physical skills)
- levels of learning:
 - rote
 - understanding
 - application
 - correlation
- memory systems and information processing models:
 - sensory register
 - short-term memory
 - long-term memory
- operational concept of TEM in relation to flight training in terms of:
 - managing threats
 - managing errors
 - managing undesired aircraft state
- positive and negative learning transfer
- principles of flight
- principles of instruction:
 - role of the instructor
 - rote learning, understanding of knowledge and correlation, and application to flight training
- principles of learning:

- adult learning process
- learning as a behavioural change
- sensory perception
- factors affecting perception and understanding
- motivation, positive and negative
- attitudes, discipline and responsibility
- principles of questioning:
 - reasons for questioning
 - characteristics of effective or open questioning techniques
 - oral questions for mental stimulation
 - confirming answers
 - desired qualities of good oral questions
 - procedure to follow when asking
 - key points when handling learner answers and questions
- purpose and use of training aids
- reasons to limit the duration of lessons and desirable duration of a typical lesson
- role of instructor in steps towards skill practice
- role of the instructor for each phase of review and evaluation:
 - fault analysis (diagnosis)
 - competency assessment
 - trainee self-assessment
 - training effectiveness
- steps to the teaching process
- relevant WHS and environmental procedures and regulations
- relevant sections of national and state/territory regulatory requirements and codes of practice
- requirements for completing relevant documentation
- risk management principles applicable to emergency procedure simulations in flight
- role of psychology in flying instruction:
 - satisfaction of human needs
 - defence mechanisms
 - dealing with stress, abnormal reactions to airborne stress situations
 - psychological problems of trainee and experienced pilots
- role of instructor in providing skill practice to trainees:
 - explanation
 - demonstration
 - performance
 - supervision
 - evaluation
- scenario-based training and its advantages in aeronautical knowledge training
- suitable procedures for developing trainee TEM skills

- suitable procedures for making decisions in-flight and for developing trainee decision-making skills
- task prioritisation system to assist the development of trainee task management skills in terms of:
 - aircraft control
 - navigation
 - communication
- teaching methods, including advantages and disadvantages:
 - lecture, theory and skill lessons, guided discussion, briefing
 - behavioural objectives, their importance and formulation
- teaching process:
 - preparation
 - presentation
 - application
 - review and evaluation
- three types of stress likely to affect trainee performance and methods of assisting trainees to cope with stress:
 - physical
 - physiological
 - psychological
- training syllabus and competency-based standards
- use and abuse of teaching aids
- risk management principles to emergency procedure simulations in flight
- instruction, questioning, engaging and motivating learners
- instructor professionalism, including interpersonal skills, implications of being a role-model, self-reflection and self-managed professional development
- learning factors that will affect trainee cognitive load:
 - anxiety
 - apathy
 - fatigue
 - lack of preparation
 - impatience
 - inadequate demonstration
 - inadequate fault analysis
 - inadequate opportunity to practise
 - outside pressures
 - physical discomfort
 - task complexity
 - unreasonable expectations
 - information overload
- operational concept of TEM in relation to flight training in terms of:

- managing errors
- managing threats
- managing undesired aircraft state
- performing and learning complex skills, including cognitive and developmental issues and observational learning
- principles of flight
- principles, purpose and location of controls, monitoring devices and systems
- procedures and strategies for developing trainee TEM skills
- rate of learning, enforced automaticity and the foundations of expertise
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders related to flight training
- relevant sections of national and state/territory regulatory requirements and codes of practice
- requirements for completing relevant documentation
- task prioritisation system to assist developing trainee task management skills in terms of:
 - aircraft control
 - navigation
 - communication
- techniques for introducing tasks in manageable segments to avoid overloading a trainee and principles for integrating task segments
- training and assessment competency standards
- transfer of control (handover and takeover or follow-through) drills and procedures
- principles and methods of instruction as prescribed in unit FIRC in Schedule 3 of the Manual of Standards (MOS)
- the process of making an objective assessment against a standard;
- provision of evidence of competency in performing as a flight crew member
- terms used in respect of the evidence used to determine an individual's competency against a standard
- the different forms of assessment and application in flight training
- the requirements for assessing consistency of performance of flight crew standards
- the differences in standards for consistency of performance at different licence levels
- the application of the range of variables in making an assessment
- performing and learning complex skills, including cognitive and developmental issues and observational learning;
- the levels of situational awareness and methods of developing and monitoring trainees' situation awareness skills
- rate of learning, enforced automaticity and the foundations of expertise
- instructor professionalism, including interpersonal skills, implications of being a role-model,
- training and assessment standards
- techniques for introducing tasks in manageable segments to avoid overloading a trainee and principles for integrating task segments
- obstacles to learning associated with flight training
- task prioritisation system to assist the development of trainee task management skills
- goal fixation effects on good decision making

- requirements for completing relevant documentation.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- acceptable means of simulated assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

relevant and appropriate materials, tools, equipment and PPE currently used in industry.

AVIM0004 Conduct training for the issue of an endorsement

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to conduct training for the issue of an endorsement in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes developing training and briefing plans, conducting pre- and post-flight briefings, and conducting training. It also includes assessing competence and completing post-training administration.

This unit addresses aviation non-technical skill requirements (physical, mental and task-management abilities) related to training and assessment duties of flight instructors and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

AVIM0003 Conduct aeronautical knowledge training and flight training

Competency Field

M – Training and Assessment

Unit Sector

Not applicable

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---|---|
| 1 Develop training and briefing plans | <p>1.1 Training plan is prepared that identifies each ground briefing and flight exercise required to achieve the standard specified to issue an endorsement or military equivalent</p> <p>1.2 Hazards are identified, risks are assessed and hazard management implemented</p> <p>1.3 Briefing plan is produced that addresses technical and human factors knowledge required to issue an endorsement or military equivalent</p> <p>1.4 Airborne training plan is prepared that identifies the sequence and duration of each flight training exercise required to achieve the standard specified to issue of an endorsement or military equivalent</p> |
| 2 Demonstrate professional knowledge | <p>2.1 Knowledge of competency-based training relevant to training endorsement is demonstrated</p> <p>2.2 Principles and methods of instruction are demonstrated whilst conducting endorsement training</p> <p>2.3 Aeronautical knowledge relevant to training endorsement is demonstrated</p> <p>2.4 Training plan relevant to training endorsement is prepared</p> |
| 3 Conduct pre- and post-flight briefings | <p>3.1 Pre-flight briefing is delivered for each flight identified in the training plan</p> <p>3.2 Pilot under training is debriefed on performance in accordance with established workplace procedures</p> |
| 4 Conduct practical training | <p>4.1 Aeronautical knowledge training is delivered in accordance with prepared training plan</p> <p>4.2 Flight training sequences are conducted to required standards specified in established workplace procedures</p> <p>4.3 Situational awareness is maintained during all phases of flight and instruction</p> |

- 4.4 Threats and errors are managed during all phases of flight and instruction
 - 4.5 Training in upset prevention and recovery is delivered applicable to the aircraft category and type
 - 4.6 Negative learning events are identified and mitigated whilst managing event occurrences
 - 4.7 Pilot under training errors are recognised, ensuring the aircraft is maintained within certified flight envelope or recognise excursion outside the valid training envelope when using synthetic training device to conduct training
- 5 Assess competence**
- 5.1 Pilot under training is assessed against competency standards specified to issue an endorsement or military equivalent
 - 5.2 Pilot under training deficiencies are identified and remedial training is planned as required
- 6 Complete post-training administration**
- 6.1 Pilot under training results are recorded in accordance with established workplace procedures
 - 6.2 Relevant staff are informed of pilot under training performance and results
 - 6.3 Administration procedures required to issue an endorsement or military equivalent are completed in accordance with established workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is not equivalent to AVIM5005 Conduct training for the issue of an endorsement.

Assessment Requirements for AVIM0004 Conduct training for the issue of an endorsement

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- adhering to pilot in command (PIC) responsibilities
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying aeronautical knowledge relevant to training endorsement type
- communicating effectively with others
- completing relevant documentation
- conducting briefings and debriefings
- conducting timely assessment of learning and performance
- demonstrating flight instructor role modelling
- evaluating instructional effectiveness and develop strategies for continuous improvement
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing crew resource management (CRM) principles
- implementing threat and error management (TEM) principles
- implementing work health and safety (WHS) procedures and relevant regulations
- including pre-flight briefing for each flight in a training plan covering all aspects of training being undertaken
- intervening as required to maintain flight safety or to assist pilot under training progress
- maintaining situational awareness while providing instruction
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- recording and debriefing training events
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures

- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate methods for analysis and training planning
- assessment of trainee behaviour
- common problems that may occur when conducting training to issue an endorsement or military equivalent, and appropriate action that should be taken in each case
- common risks that exist when conducting training to issue an endorsement
- competency standards for training endorsement
- human performance and limitations factors relevant to training tasks
- lesson planning and development
- preparation of training resources
- principles and methods of instruction
- principles of adult teaching and learning
- principles of assessment
- psychological factors affecting satisfaction of human needs, defence mechanisms and stress management
- questioning techniques
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders related to flight training
- relevant sections of national and state/territory regulatory requirements and codes of practice
- relevant WHS and environmental procedures and regulations
- relevant workplace policies and procedures
- requirements for completing relevant documentation
- self-assessment and evaluation
- training and assessment competency standards.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must include at least one training endorsement type:

- Grade 1 training endorsement
- Grade 2 training endorsement
- Grade 3 training endorsement (Aeroplane)
- Grade 3 training endorsement (Helicopter)
- Multi-crew pilot training endorsement
- Type rating training endorsement
- Class rating (multi-engine aeroplane) training endorsement
- Design feature training endorsement
- Instrument rating training endorsement
- Night visual flight rules (NVFR) training endorsement
- Night vision imaging system (NVIS) training endorsement
- Low-level rating training endorsement
- Aerial application (day) training endorsement
- Aerial application (night) training endorsement
- Instructor rating training endorsement
- Multi-engine aeroplane class rating instructor training endorsement
- Sling operations training endorsement
- Winch and rappelling training endorsement
- Spinning training endorsement
- Aerobatics training endorsement
- Formation (aeroplane) training endorsement
- Formation (helicopter) training endorsement
- Formation aerobatics training endorsement

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIM0005 Facilitate non-technical skills instruction

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to facilitate non-technical skills instruction in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

Use of this unit outside of aviation training and assessment environments is to be in accordance with relevant regulatory authority requirements and industry standards.

It includes instructing effective lookout procedures, situational awareness techniques, and effective situational awareness and decision making. It also includes instruction of task priority and management, and effective communications and teamwork.

This unit addresses aviation non-technical skill instructional requirements (mental, social, and personal-management abilities) for training personnel that complement the technical skills of the individual and contributes to safe and effective performance in operational environments.

Non-technical skills instruction is conducted as part of recreational, commercial and/or military aviation training across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Work is performed independently and without supervision within a multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

M – Training and Assessment

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---|--|
| 1 Instruct effective lookout procedures | <p>1.1 Systematic visual scan techniques at a rate determined by traffic density, visibility and terrain are demonstrated and monitored</p> <p>1.2 Radio listening watch procedures are demonstrated and monitored, including interpreting transmissions to determine traffic location and intentions</p> <p>1.3 Airspace clearance procedures are demonstrated and monitored</p> |
| 2 Instruct situational awareness techniques | <p>2.1 Perception of the elements in the environment within a volume of time and space, the comprehension of their meaning and the projection of the status in the near future are described</p> <p>2.2 Methods to monitor, gather and interpret appropriate information from both inside and outside the aircraft are demonstrated</p> <p>2.3 Methods to maintain or regain situational awareness using flight control instruments and systems are demonstrated</p> |
| 3 Instruct effective situational awareness and decision making | <p>3.1 Methods of receiving and processing situational awareness information are demonstrated and monitored</p> <p>3.2 The conversion of information for use within current or future situations is demonstrated and monitored</p> <p>3.3 The generation of decision options are demonstrated, directed and monitored</p> <p>3.4 The analysis of decision options is demonstrated, directed and monitored</p> <p>3.5 The decision outcome is demonstrated and communicated</p> <p>3.6 Evaluation of the decision is demonstrated and monitored for effectiveness</p> |
| 4 Instruct task priority | <p>4.1 Task prioritisation is demonstrated, directed and</p> |

	and management	monitored
		4.2 Effective task management is demonstrated and monitored
5	Instruct effective communications and teamwork	5.1 Verbal communications are demonstrated, directed and monitored using appropriate levels of language proficiency
		5.2 Learner interactions are monitored to assess effectiveness of communication techniques and styles
		5.3 Questioning techniques are applied to confirm learner understanding
		5.4 Responses are sought and provided to others in a timely manner
		5.5 Information received is clarified/confirmed, interpreted and accurately communicated or reported with due observation of ethics and protocols required of the operational environment
		5.6 Communication is undertaken in varying situations with culturally diverse, familiar and unfamiliar individuals, teams and crew
		5.7 Appropriate protocols and procedures are followed when using communications systems during routine and contingency aviation operations

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AVIM0005 Facilitate non-technical skills instruction

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- accepting responsibility for own instructional performance
- applying relevant knowledge of instructional methods and techniques
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting relevant instructions, regulations, procedures and other information
- instructional methods to manage contingency operations:
 - abnormal situations
 - emergency conditions
- methods of monitoring flight path, aircraft configuration and systems to achieve desired performance using systematic scan techniques
- selecting and using appropriate instruments, displays, communications equipment and aids to support non-technical skills instruction
- using appropriate normal, abnormal and emergency aviation terminology.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- assessment principles, including:
 - validity
 - reliability
 - flexibility
 - fairness
- decision processes, including:
 - receiving information
 - converting information into reality
 - generating options

- analysing options
- making decisions
- definitions, including:
 - airmanship
 - airspace cleared procedure
 - behavioural markers
 - error
 - flight environment
 - formative assessment
 - human factors
 - judgement
 - leadership
 - manage/management
 - non-technical skills
 - safe/safety/safely
 - safest outcome
 - situation awareness
 - stakeholder
 - standard operating procedure (SOP)
 - stress/stressors
 - summative assessment
 - technical skills
 - threat
 - threat and error management
 - undesired aircraft state
 - violation
- dimensions of competency, including:
 - task skills
 - management and contingency skills
 - role skills
 - transfer skills
- human factors that adversely affect communications, including:
 - poor tone or phrasing of communications
 - lack of openness
 - poor reaction to criticism
 - aggressiveness or lack of assertion
 - unwillingness to listen
 - disrespect for others
 - arrogance

- incorrect use of authority
- human factors that adversely affect task management, including:
 - lack of preparation - confusion and disorganisation
 - fatigue - poor decision making and errors
 - discomfort - distraction and fatigue
 - stress - inefficiency and distraction
 - arousal - increased or decreased work cycles
 - distraction - diverted attention and lack of concentration
 - non-use of system automation - increased work
 - destination or task obsession - poor decision making and desire to 'press on'
 - bad health - decreased physical and psychological performance
 - overload - fixation, tunnel vision and broken work cycles
- human performance limitations, including physiological, psychological and ergonomic aspects:
 - fatigue
 - illusion
 - drug and alcohol management
 - general health
 - knowledge of the functions of the eyes and ears
- indicators of human factor deficiencies, including:
 - poor lookout
 - poor situation awareness
 - poor decision making
 - lack of task organisation
 - insufficient communication
 - failure to recognise threats to safety
 - commission of errors
- limitations that affect information processing and decision making, including:
 - time constraints
 - mental overload
 - task mismanagement
 - conflicting information
 - expectations and anticipation
 - fatigue
 - insufficient knowledge
 - forgetting requirements or information
 - emotional state
 - confirmation bias (ignoring information that does not support the decision)
 - personality traits
 - failure to seek or apply feedback

- stress
- fixation and destination obsession
- principles of evidence assessment, including:
 - validity
 - authenticity
 - sufficiency
 - currency
- principles of prioritisation and task management.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- acceptable means of simulated assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIM0006 Conduct a flight test

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to conduct a flight test in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

This unit also applies to conducting and administering a proficiency check.

It includes planning a flight test, preparing an applicant for a flight test and conducting a flight test. It also includes making assessment decisions, conducting post-flight test briefing and completing administrative requirements.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to training and assessment duties of flight examiners and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

M – Training and Assessment

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Plan a flight test

- 1.1** Applicable flight test to be conducted is identified and appropriate flight test is extracted from relevant licensing regulations
- 1.2** Applicant eligibility to participate in flight test to be conducted is confirmed
- 1.3** Competency standards that must be assessed are identified
- 1.4** Evidence gathering activities and methods are identified to provide sufficient, reliable, valid and fair evidence of competency
- 1.5** Completion of flight test applicant's knowledge deficiency report (KDR) and certification of this by flight training operator are confirmed
- 1.6** Additional flight test applicant KDR assessments are planned as required

2 Prepare applicant for flight test

- 2.1** Flight test applicant identity and flight test recommendation issued by flight training operator are confirmed
- 2.2** Flight test applicant's eligibility to be issued a licence and/or a rating/s as a result of assessment is confirmed
- 2.3** Knowledge evidence specified for the unit of competency being assessed is confirmed through ground-based assessment or identified airborne practical assessment
- 2.4** KDR assessments are conducted as required
- 2.5** Context, purpose and content of flight test is explained to and confirmed with applicant
- 2.6** Flight test assessment procedures and expected performance requirements are explained to and confirmed with applicant
- 2.7** Function of flight examiner, including role-playing, simulation and procedures in an emergency, are explained to and confirmed with applicant

- 2.8 Applicant specific needs are identified and provisions for reasonable adjustments to the assessment procedure are made
 - 2.9 Action to be taken as a result of flight test applicant's failure to achieve required performance standard is explained to and confirmed with applicant
 - 2.10 Information is conveyed using appropriate language, interactive strategies and techniques to communicate effectively with applicant
- 3 Conduct flight test**
 - 3.1 Flight test process is correctly applied in accordance with relevant sections of flight examiner manual
 - 3.2 Clear, logical, systematic and unambiguous explanations are used to convey information to applicant to ensure the effective conduct of flight test
 - 3.3 Intervention is limited to ensuring effective conduct of the flight test and management of contingencies and abnormal or emergency situations
 - 3.4 Applicant's performance is monitored and assessed and a comprehensive record of events maintained
 - 3.5 Safe completion of the flight test is ensured and situational awareness maintained throughout flight test activities
- 4 Make assessment decisions**
 - 4.1 Evidence of the applicant's performance in terms of validity, authenticity, sufficiency, currency and consistent achievement of the specified standards is evaluated
 - 4.2 Evidence of the applicant's performance is evaluated using a holistic procedure that ensures all dimensions of competency when conducting tasks, managing tasks and contingencies, operating in a flight environment and transferring skills and knowledge to new situations and contexts is considered
 - 4.3 Assessment decision is made based on objective evaluation of the evidence against the specified competency or proficiency standards
- 5 Conduct post-flight test briefings**
 - 5.1 Applicant is advised of the achievement of competency, or failure to achieve competency

- 5.2 Clear and constructive feedback about performance is provided to the applicant using appropriate language and strategies, including guidance on further training if appropriate
 - 5.3 Opportunities for overcoming any identified gaps in competency as revealed by the assessment are explored with applicant
 - 5.4 Applicant is advised of reassessment procedures and appeals mechanism if assessment decision is challenged
 - 5.5 Relevant flight instructors and flight training operator are advised of flight test result and reasons for outcome, including positive and negative aspects of applicant performance and information to assist in improving training outcomes
- 6 Complete administrative requirements**
- 6.1 Relevant flight test application and appropriate flight test forms are completed
 - 6.2 Applicant flight test results are recorded in approved training documentation and/or recordkeeping systems
 - 6.3 Applicant flight test report, licence application form and notification of ratings and endorsements that have been issued are forwarded to civil licensing or military regulatory agencies

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIM0001 Conduct a flight test.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: -

Assessment Requirements for AVIM0006 Conduct a flight test

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing and interpreting flight test requirements to:
 - unpack units of competency and their associated assessment requirements
 - interpret assessment tools and other assessment information, including those used in skills recognition
 - identify flight test applicant needs
 - make judgements based on assessment of available evidence
- applying relevant aeronautical knowledge
- communicating effectively to:
 - explain assessment, including skills recognition processes
 - give clear and precise instructions
 - ask effective questions
 - provide clarification
 - discuss processes with relevant people
 - give appropriate feedback
 - discuss assessment outcomes
 - establish a working relationship with applicant
- guiding applicants in gathering their own evidence to support recognition of prior learning (RPL)
- observing applicant and making decisions to:
 - identify when applicant may need assistance and/or reasonable adjustment during assessment processes
 - recognise applicant's existing skills
 - determine applicant's competence
- preparing required flight test documentation, records and/or reports of assessment outcomes in required format
- reading and interpreting relevant flight test information to conduct assessment
- researching and evaluating assessment processes to:
 - access human and material resources required for assessment
 - access assessment system policies and procedures

- access skills recognition policies and procedures
- evaluate evidence
- evaluate assessment process
- thinking about applicant in relation to assessment requirements to:
 - use language appropriate to applicant and assessment environment
 - weigh up evidence and make a judgement
 - consider and recommend reasonable adjustments.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable flight test subject matter
- appropriate methods of analysis and training planning
- assessment of behaviour
- Civil Aviation Safety Authority (CASA) Flight Examiner Handbook (Civil aviation only)
- competency-based assessment, including:
 - vocational education and training (VET) as a competency-based system
 - criterion-referenced assessment as distinct from norm-referenced assessment
 - competency standards as the basis of qualifications
 - structure and application of competency standards
 - principles of assessment and how they are applied
 - rules of evidence and how they are applied
 - range of assessment purposes and assessment contexts, including skills recognition
 - different assessment methods, including suitability for gathering various types of evidence, suitability for content of units, and resource requirements and associated costs
 - reasonable adjustments and when they are applicable
 - types and forms of evidence, including assessment instruments relevant to gathering different types of evidence used in competency-based assessment, including skills recognition
 - potential barriers and processes relating to assessment tools and methods
 - assessment system, including policies and procedures established by industry, organisation or training authority
- cultural sensitivity and equity considerations
- human performance and limitations factors relevant to training tasks
- lesson planning and development
- organisational RPL and skills recognition policies and procedures
- preparation of training resources
- principles of adult teaching and learning
- principles of assessment
- principles of equity

- psychological factors affecting satisfaction of human needs, defence mechanisms and stress management
- questioning techniques
- relevant policy, legislation, codes of practice and national standards, including commonwealth and state/territory legislation that may affect training and assessment in the VET sector, such as:
 - copyright and privacy laws in terms of electronic technology
 - security of information
 - plagiarism
 - training packages and competency standards
 - licensing requirements
 - industry and workplace requirements
 - duty of care under common law
 - recording information and confidentiality requirements
 - anti-discrimination, including equal employment opportunity (EEO), racial vilification and disability discrimination
 - workplace relations
 - industrial awards and enterprise agreements
- relevant workplace policies and procedures
- self-assessment and evaluation
- training and assessment competency standards
- work health and safety (WHS) responsibilities associated with assessing competence, including:
 - requirements for reporting hazards and incidents
 - emergency procedures
 - procedures for using relevant personal protective equipment (PPE)
 - safe use and maintenance of relevant equipment
 - sources of WHS information.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIM0007 Plan and conduct multi-crew cooperation training

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to plan and conduct multi-crew cooperation (MCC) training in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes applying knowledge of competency-based MCC training, preparing to deliver training and preparing trainees for training sessions. It also includes conducting a multi-crew training session, conducting post-session assessment and conducting post-session administration.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to training and assessment duties that complement the technical skills of flight instructors and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a multi-crew environment. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

M – Training and Assessment

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Apply knowledge of competency-based MCC training

- 1.1** Core philosophy of competency-based training is explained
- 1.2** Aviation training and assessment that is characterised by an emphasis on performance measured against identified competencies is conducted
- 1.3** Trainee is assessed on the basis of meeting prescribed competency standards
- 1.4** Competencies required by crew to operate effectively in a MCC are stated

2 Prepare to deliver training

- 2.1** Administrative tasks are completed in accordance with training organisation's requirements
- 2.2** Training plan is prepared or provided that identifies each performance criteria required to achieve the standard specified for the issue of an endorsement
- 2.3** Trainee performance record is prepared or provided for recording trainee performance against all performance criteria and assessment requirements associated with the competency standard
- 2.4** Assessment requirements are prepared or provided to assist with assessing trainee performance
- 2.5** Achievement record is prepared or provided to record the date a trainee is signed off as competent in a competency
- 2.6** Personal preparation to deliver training session as scheduled is completed
- 2.7** All supplied training material is checked for completeness and currency, and availability and serviceability of all equipment/classroom/simulator used to deliver training session is confirmed
- 2.8** Incomplete and/or out-of-date supplied training material is replaced with complete and up-to-date training material
- 2.9** Unavailable or faulty training

- equipment/classroom/simulator is reported as required and replacements obtained or training is re-scheduled
- 2.10** Trainee records are reviewed prior to training session to understand their experience level and competency level
- 3 Prepare trainees for training session**
- 3.1** Trainee fatigue is assessed prior to commencing training session
- 3.2** Trainees are set tasks to prepare for training session
- 3.3** Session objectives, unit of competency and its associated assessment requirements to meet the required level of competency are clearly communicated
- 4 Conduct a multi-crew training session**
- 4.1** Learning process is confirmed as required and applied
- 4.2** Trainee performance is assessed against performance criteria and assessment requirements associated with the relevant competency standard/s
- 4.3** Role play by trainees is used to gain insight to cockpit crew roles
- 4.4** Training sessions are structured to have outcomes that emphasise the importance of working as a highly coordinated team and of applying problem solving to real-world scenarios
- 4.5** Trainee use of all information available from a range of sources to assist with problem solving is ensured
- 4.6** Non-technical skills rather than flight control skills are emphasised during exercises
- 4.7** Scenarios are used to discuss how a breakdown in crew coordination may lead to an undesired aircraft state
- 4.8** Correct use of checklists and the following of standard operating procedures (SOPs) is strictly applied at all times, and a high level of cockpit discipline is maintained through training scenarios
- 4.9** Situational awareness and the importance of applying the threat and error management (TEM) model is emphasised
- 4.10** Effects of automation induced complacency are highlighted

- 4.11** Trainee continual awareness of automation mode and its correct use and limitations is ensured
 - 4.12** Development of a compromised cockpit authority gradient is identified to trainee
 - 4.13** During periods of potential high trainee workload, task distraction and attention diversion, and priority towards aircraft flight path control is emphasised
 - 4.14** Trainees are monitored during session for signs of overload and breakdown in learning environment
 - 4.15** Session structure and pace is matched to trainee skill levels
- 5 Conduct post-session assessment**
 - 5.1** Trainee performance against performance criteria and assessment requirements in the session is analysed
 - 5.2** Trainees are debriefed as a crew and then individually as required
 - 5.3** Trainees are debriefed from a macro to micro perspective, giving a general overview of performance then focusing on specific areas requiring attention to improve competence
 - 5.4** Post-session plan of action for trainee to address areas requiring attention is provided
 - 5.5** Debriefs are completed on a positive note highlighting areas of good performance
- 6 Conduct post-session administration**
 - 6.1** Trainee performance record is completed in a comprehensive and legible manner as soon as practicable after session, and before commencement of subsequent training sessions
 - 6.2** Trainee competence in a particular competency is determined
 - 6.3** Achievement record is completed when competence in a particular competency has been achieved

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIM0002 Plan and conduct multi-crew cooperation training.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIM0007 Plan and conduct multi-crew cooperation training

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified multi-crew cooperation (MCC) hazards
- applying relevant aeronautical knowledge
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising workload
- maintaining compliance with regulatory requirements
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- selecting and using relevant equipment during MCC training
- selecting and using required personal protective equipment (PPE).

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Civil Aviation Safety Regulation (CASR) Part 61 Manual of Standards (MOS) Aeronautical

Knowledge relevant to multi-crew operations and MCC training

- cultural factors related to MCC
- principles and methods of instruction
- principles of competency-based training in aviation
- principles of effective interpersonal communication
- training administration and documentation
- training session planning
- training equipment and serviceability
- training facilitation skills
- problem solving
- threat and error management (TEM)
- situational awareness
- effects of automation
- principles and methods of feedback
- multi-crew coordination.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

AVIM0008 Operate a simulator

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to operate a simulator in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

Use of this unit for simulation activities outside of an aviation context is to be in accordance with relevant regulatory, organisational or enterprise procedures.

It includes applying simulation operations safety, conducting pre-operation planning, controlling a simulation activity and performing post-operation activities.

This unit addresses technical skill requirements (physical, mental and task-management abilities) related to training and assessment duties of simulator operators, instructors and assessors, and contributes to safe and effective performance in simple and/or complex operational or training environments.

Operations are conducted as part of recreational, commercial and military simulation activities across a variety of operational contexts within the Australian aviation industry, or other vocational operating environments when required.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

M – Training and Assessment

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Apply simulation operations safety

- 1.1 Access and egress to simulator is conducted in accordance with workplace procedures
- 1.2 Safety and emergency procedures are communicated and actioned as required
- 1.3 Simulator serviceability is monitored in accordance with workplace procedures
- 1.4 Effects of simulation sickness are communicated to participants and treated as required in accordance with workplace procedures
- 1.5 Workplace safety communications are followed in accordance with workplace procedures

2 Conduct pre-operation planning

- 2.1 Appropriate simulation equipment is selected
- 2.2 Simulation activity plan is developed in accordance with activity requirements
- 2.3 Operating manuals are used to support work practices
- 2.4 Simulation data is accessed to suit work practices in accordance with workplace procedures
- 2.5 Simulation data is manipulated to suit work requirements in accordance with workplace procedures
- 2.6 Simulation data is saved in accordance with workplace procedures
- 2.7 Simulation data is stored to suit work requirements in accordance with workplace procedures

3 Control a simulation activity

- 3.1 Liaison with relevant personnel is conducted to determine simulation activity requirements
- 3.2 Simulation activity is commenced
- 3.3 Simulation equipment is employed

- 3.4 Communication with simulation activity participants is maintained
 - 3.5 Abnormal/unusual conditions are monitored and addressed
 - 3.6 Variations to activity conditions are made as requested/required
 - 3.7 Activity is ceased in accordance with simulation activity plan
- 4 Perform post-operation activities**
- 4.1 Simulation results are saved in accordance with workplace procedures
 - 4.2 Activity participants are debriefed as required
 - 4.3 Simulator faults are recorded in accordance with workplace procedures
 - 4.4 Simulation equipment is refurbished/maintained in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIM5001 Operate a simulator.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIM0008 Operate a simulator

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- accessing simulation data, including:
 - downloading from database
 - inserting a digital storage device
 - opening applications, directories and files
- applying fine physical motor skills
- communicating safety and emergency procedures
- communicating simulation sickness effects
- completing administrative tasks and functions related to simulator operations, including:
 - simulation activity planning
 - participant performance records and reports
 - simulation safety briefs
 - participant briefings/debriefings
- coordinating activities that involve a range of simple and/or complex tasks
- conducting access and egress, including:
 - appropriate and safe entry to simulator in accordance with organisational work health and safety (WHS) and security policies
 - appropriate and safe exit methodologies from simulators
 - interpretation of signage, safety warnings and simulator status
 - monitoring access of visitors to simulator and providing safety/security briefs as required
- coordinating information communication technology related activities
- creating and storing documents using information communication technology
- identifying and rectifying abnormal/unusual simulator conditions, including:
 - participant simulation sickness
 - equipment malfunction/failure
 - smoke or overheat warnings
 - emergency communication
 - loading stops
 - motion stops

- hardware malfunction/failure
- software malfunction/failure
- poor/unusual participant performance
- personnel equipment malfunction/failure
- implementing WHS procedures and relevant regulations
- implementing simulation activity variations, including:
 - adapting scenarios/activities based on participant feedback and/or performance
 - modifying hardware configurations
- modifying software settings
- manipulating, saving and storing simulation data in accordance with workplace procedures
- monitoring and addressing abnormal/unusual conditions
- monitoring simulator serviceability, including:
 - ensuring simulator is maintained to a level satisfactory to comply with organisational requirements
 - recording hardware/software issues that may arise during the course of routine equipment operation
 - submission of routine maintenance documentation
- reading, comprehending and interpreting written technical English
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- recording simulator faults
- refurbishing/maintaining simulator equipment and operating systems in accordance with workplace procedures
- selecting and employing simulation equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- abnormal conditions, including hardware, software and equipment malfunction/failure and poor/unusual participant performance
- application of simulation and synthetic activities including live, virtual and constructive (LVC) simulations
- basic database management
- basic briefing and debriefing techniques, including:
 - simulator safety
 - simulation event review
- documentation production and safe storage
- effects of simulation sickness, including:
 - nausea subscale:
 - increased salivation

- sweating
- nausea
- stomach awareness
- burping
- oculomotor subscale:
 - fatigue
 - headache
 - eyestrain
 - difficulty focusing
- disorientation subscale:
 - vertigo
 - dizzy (eyes open)
 - dizzy (eyes closed)
 - blurred vision
- established procedures applicable to simulation operations
- functions of single-user, multi-user and distributed user operating systems
- identification of signs/symptoms and methods of rectifying abnormal/unusual simulator conditions, including:
 - participant simulation sickness
 - equipment malfunction/failure
 - smoke or overheat warnings
 - emergency communication
 - loading stops
 - motion stops
 - hardware malfunction/failure
 - software malfunction/failure
 - poor/unusual participant performance
 - personnel equipment malfunction/failure
 - relevant WHS and environmental procedures and regulations applicable to simulation operations and personnel safety/individual safety considerations
 - safety briefings
 - access and egress procedures
 - reporting and recording simulation WHS issues
- information communications technology in the simulation and synthetic learning environment
- simulation activity variations, including:
 - adapting scenarios/activities based on participant feedback and/or performance
 - modifying hardware configurations
 - modifying software settings.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- appropriate simulation equipment must include one or more of the following:
 - access database
 - compact discs
 - computer software subclass
 - digital insertion devices
 - gaming software
 - personnel equipment (e.g. hearing protection, eye protection, clothing and footwear)
 - software applications
 - storage strategy within organisational databases
 - synthetic environment software (e.g. SETHI)
 - universal serial bus devices
 - web-based database
- simulator must include one or more of the following:
 - associated simulator computer hardware and software
 - desktop simulator
 - full motion simulator
 - flight training device
 - operating system
 - part-task trainer
 - simulator
 - single, multiple or team operator simulator
 - synthetic training device

- virtual reality training system.

AVIM0009 Facilitate training in a synthetic environment

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to facilitate training in a synthetic environment in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

Use of the unit for simulation training activities outside of an aviation context is in accordance with relevant regulatory, organisational or enterprise procedures.

It includes planning a synthetic learning activity; preparing a trainee for these activities; and guiding, facilitating and monitoring learning. It also includes conducting post-training activities and reviewing facilitation processes.

This unit addresses vocational training technical skill requirements (physical, mental and task-management abilities) related to synthetic training and assessment duties of vocational instructors and assessors and contributes to safe and effective performance in simple and/or complex operational and training environments.

Operations are conducted as part of commercial and military vocational training activities across a variety of operational contexts within Australian industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

M – Training and Assessment

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Plan a synthetic learning activity

1.1 Learning strategy and/or learning program is accessed, read and interpreted to determine learning outcomes or objectives to be met and relevant delivery requirements

1.2 Potential risks, including those associated with human factor aspects of synthetic training devices, are identified

1.3 Limitations of synthetic training device are identified

1.4 Delivery plan is developed to plan, manage and sequence synthetic training activities and events to ensure logical progression of learning content, trainee safety and continuity of trainee progress

1.5 Technical and human factor requirements for synthetic environment, including safety and emergency procedures, are confirmed

2 Prepare trainee for synthetic training activities

2.1 Availability of suitable resources is confirmed

2.2 Mental and physical preparedness of trainee to undertake training in synthetic environment is confirmed

2.3 Introduction to synthetic environment is provided, including training objectives and relevant workplace procedures

2.4 Instructional relationships are established between trainer/facilitator and trainees using appropriate communication tools and skills

2.5 Trainee is briefed on how synthetic training activity will be conducted to meet training objectives

2.6 Risk management issues applicable to synthetic training activity are discussed with trainee and trainee responsibility for managing relevant risks is confirmed

2.7 Trainee ability to comprehend and/or recall training objectives, knowledge, handling techniques and planned

- synthetic training activity/scenario is confirmed
- 3 Guide and facilitate learning in a synthetic environment**
- 3.1** Liaison with relevant personnel is conducted to determine simulation activity requirements
- 3.2** Learning is facilitated in accordance with delivery plan using relevant synthetic devices and facilitation skills
- 3.3** Good practice in facilitating learning in a synthetic environment is applied to ensure an effective and safe transfer of learning to the real world
- 3.4** Technical issues are addressed as required using relevant technical support mechanisms and/or personnel
- 3.5** Opportunities for authentic learning, practice and formative assessment are built into the learning experience
- 3.6** Pre-loaded automatic demonstrations are employed as required
- 3.7** Abnormal/unusual conditions are monitored and addressed
- 3.8** Variations to activity conditions are implemented as required
- 3.9** Handover/takeover procedures for control of synthetic device are implemented in accordance with workplace procedures
- 4 Monitor learning in a synthetic environment**
- 4.1** Trainee progress is monitored and documented in accordance with workplace procedures
- 4.2** Trainee cognitive load is assessed, monitored and managed
- 4.3** Support and guidance are provided within synthetic environment as appropriate
- 4.4** Trainee is encouraged to develop self-assessment skills
- 4.5** Trainee interaction with others and participation in synthetic training activities is continuously monitored, and interventions are made as required
- 4.6** Opportunities are provided for trainees to reflect on their learning progress

- | | |
|--|---|
| 5 Conduct post-training activities | 5.1 Significant details of trainee performance are clearly and accurately debriefed |
| | 5.2 Playback devices are employed during debriefing to illustrate key learning points as required |
| | 5.3 Trainee is briefed on details of next training event as required |
| | 5.4 Trainee records are maintained in accordance with workplace procedures |
| | 5.5 Relevant stakeholders are kept informed about trainee progress |
| | 5.6 Synthetic device faults are recorded and/or rectified in accordance with workplace procedures |
| | 5.7 Support and guidance are provided post-synthetic environment activities as required |
| 6 Review synthetic environment facilitation processes | 6.1 Synthetic training session outcomes are evaluated against desired session outcomes |
| | 6.2 Review is undertaken post-completion of learning program, course or qualification |
| | 6.3 Time is taken to reflect on own performance as a trainer or facilitator, and ways to improve performance are explored |
| | 6.4 Recommendations for improvements in facilitating training and appropriateness of synthetic systems, tools and resources are identified and documented, and discussed with relevant personnel for future action |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIM5004 Facilitate training in a synthetic environment.

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIM0009 Facilitate training in a synthetic environment

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying flexibility in facilitation when using synthetic devices, including:
 - applying intervention techniques
 - assessing learning and performance
 - effectively using a variety of activities or providing directions for different trainee needs
- conducting briefings and debriefings
- confirming technical and human factor requirements for a synthetic environment
- following safety and emergency procedures, including established procedures and industry safe practice
- coordinating activities involving a range of complex tasks
- coordinating information communications technology related activities
- debriefing significant details of trainee performance
- developing a delivery plan that ensures logical progression of learning content, trainee safety and continuity of trainee progress, including:
 - determination of learning management tools, such as feedback systems and support mechanisms
 - individual/group learning objectives or outcomes for learning program or segment of learning program to be addressed
 - learning/activities/events to be addressed in e-learning sessions
 - number of trainees and their specific support requirements
 - resources and/or tools to be used
 - timing, sequence and number of pre-planned sessions
 - types of pre-planned sessions – synchronous (in real time using conferencing, chats and forums) or asynchronous (not in real time using email, offline forums and bulletin boards)
 - topics to be addressed in learning sessions
- evaluating instructional effectiveness
- identifying potential risks, including those associated with human factor aspects of synthetic

training devices

- identifying potential risks, including:
 - effects on what is learned and relationship with the real world
 - negative learning
- implementing handover/takeover procedures for control of synthetic device in accordance with workplace procedures
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting trainee needs and directing them to new learning opportunities
- maintaining trainee records in accordance with workplace procedures
- managing an environment that fosters learning and performance
- monitoring and addressing abnormal/unusual conditions
- monitoring and documenting trainee progress in accordance with workplace procedures
- reading, comprehending and interpreting written technical English
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- selecting and employing appropriate simulation equipment
- selecting and using required personal protective (PPE) equipment conforming to industry and WHS standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- abnormal conditions, including hardware, software and equipment malfunction/failure and poor/unusual trainee performance, including:
 - emergency communication
 - equipment malfunction/failure
 - hardware malfunction/failure
 - loading stops
 - motion stops
 - participant simulation sickness
 - personnel equipment malfunction/failure
 - poor/unusual participant performance
 - smoke or overheat warnings
 - software malfunction/failure
- advantages of synthetic training environments in facilitating learning
- limitations of synthetic training devices, including:

- fidelity
- instrumentation
- movement
- resolution
- good practice in facilitating learning in a synthetic environment, including:
 - assisting trainees in locating, using and evaluating online information
 - facilitating group work
 - guiding learning activities through setting up questions, issues, scenarios to be addressed
 - knowing when to intervene/when to let trainees direct themselves
 - maintaining momentum and motivation of trainees through ongoing individual contact and feedback
 - moderating disruptive, abusive or dominant trainees
 - observing trainee interaction and intervening as required to maintain focus/momentum/engagement
- application of simulation and synthetic activities including live, virtual and constructive (LVC) simulations
- common trainee errors and suggested suitable remedial instruction
- risk management issues, including:
 - emergency communication
 - equipment malfunction/failure
 - fidelity and resolution constraints/limitations smoke or overheat warnings
 - loading stops
 - motion stops
 - negative learning
 - simulator access/egress
 - simulation/motion sickness
 - threat and error management (TEM)
- debriefing and feedback techniques, including:
 - individual versus group debrief
 - basic techniques:
 - review simulation event
 - recall what happened
 - clarify facts
 - correct misconceptions
 - reinforce specific learning outcomes
 - intermediate techniques:
 - guided reflection of event
 - coaching methodology
 - transfer learning responsibility to participants
 - decision-making analysis

- cost versus benefit/trade-offs
- skill and knowledge technique enhancement
- advanced techniques:
 - less guidance
 - using media/checklists/video
 - oral and written evaluation
 - part of group talks/part listens
 - varied perspective (observers)
 - developing and evaluating new concepts
 - developing self-evaluative learning in participants
- debrief of stakeholders, including:
 - feedback to manufacturer, contracted suppliers and contracted maintainers
 - feedback to relevant organisational authorities
 - feedback to relevant personnel on conclusion of simulator activity
- documentation production and safe storage
- effective use of a course of training, curricula/syllabus and lesson plans
- effects of simulation sickness:
 - nausea subscale:
 - increased salivation
 - sweating
 - nausea
 - stomach awareness
 - burping
 - oculomotor subscale:
 - fatigue
 - headache
 - eyestrain
 - difficulty focusing
 - disorientation subscale:
 - vertigo
 - dizzy (eyes open)
 - dizzy (eyes closed)
 - blurred vision
 - established procedures applicable to simulation operations
- variations to training activity:
 - changes made in response to a strategic requirement
 - changes made in response to a training need
- functions of single-user, multi-user and distributed user operating systems
- fundamentals of instructing, questioning, engaging and motivating trainees
- handover/takeover procedures for controlling synthetic device/s

- how to distinguish between a technical problem and a content problem, and how to respond accordingly
- human factors implication and risks in a synthetic training environment
- information communications technology in a simulation and synthetic environment
- intervention strategies, principles and implications for a synthetic environment
- relevant learning management systems
- relevant WHS and environmental procedures and regulations applicable to simulation operations and personnel safety
- relevant sections of national and state/territory regulatory requirements and codes of practice
- sequencing and developing synthetic training activities and their relationship with real world training activities
- structure and content of relevant training resources
- techniques for introducing tasks in manageable segments to avoid overloading a trainee
- training and assessment competency standards
- cognitive load assessment, including:
 - anxiety
 - apathy
 - fatigue
 - impatience
 - inadequate demonstration
 - inadequate fault analysis
 - inadequate opportunity to practice
 - information overload
 - lack of preparation
 - outside pressures
 - physical discomfort
 - task complexity
 - unreasonable expectations
- when to intervene and when to let trainees direct themselves
- when interventions must be made to:
 - address safety
 - engage trainee
 - highlight a key learning point
 - initiate remedial actions
 - maintain momentum
- review of training, including:
 - effectiveness of learning protocols, their application and proposed changes
 - feedback from trainees, colleagues, learning designers via survey or discussion
 - identification of issues in managing/monitoring e-learners and the need for changes to contact/monitoring processes
 - identification of issues in using a delivery plan and the need for changes/modifications to

the plan

- technology effectiveness
- self-reflection, including:
 - asking critical questions about performance, problems, methods used and success of trainees
 - seeking, listening to and acting on feedback from trainees and others.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

Synthetic training devices must include one of the following:

- associated simulator computer hardware and software
- desktop simulator
- flight training device
- full motion simulator
- operating system
- part-task trainer
- simulator
- single, multiple or team operator simulator
- synthetic training device
- virtual reality training system.

AVIM0010 Conduct flight review

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to conduct flight reviews in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes conducting pre-flight discussions, conducting a flight review, and completing post-review briefing and administration.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to training and assessment duties of flight instructors and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

M – Training and Assessment

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

1 Conduct pre-flight discussion

1.1 Pre-flight discussion plan is prepared that covers topics required for rating being reviewed

1.2 Pre-flight discussion plan is delivered

1.3 Opportunities to actively participate in discussion are provided to applicant

1.4 Discussion is reviewed to determine whether aims of discussion were achieved

2 Conduct review

2.1 Flight review is conducted in accordance with flight review standards as specified in applicable regulations

2.2 Applicant performance against the standards specified in applicable regulations is identified

2.3 Remedial training for those elements performed below the specified standard is determined

2.4 Remedial training is conducted as required in accordance with established workplace procedures

3 Complete post-review briefing and administration

3.1 Post-review briefing is conducted that includes assessment of applicant competence against standards specified in applicable regulations

3.2 Post-review administration is completed in accordance with established workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIM5008 Conduct flight review.

Assessment Requirements for AVIM0010 Conduct flight review

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant aeronautical knowledge
- assessing applicant competence against required standards
- communicating effectively with others
- completing relevant documentation
- demonstrating flight instructor role modelling
- developing and delivering an appropriate pre-flight discussion plan
- ensuring aircraft is operated in accordance with aircraft operating parameters
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing crew resource management (CRM) principles
- implementing threat and error management principles
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others when conducting a flight review
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate methods of analysis and training planning
- assessment of behaviour
- common problems that may occur when conducting flight reviews and appropriate action that should be taken in each case
- common risks that exist when conducting flight reviews
- competency standards for pilots (civil or military)
- human performance and limitations factors relevant to the training tasks
- in an Australian Defence Force context, relevant Defence Orders and Instructions
- lesson planning and development
- preparation of training resources
- principles of adult teaching and learning
- principles of airborne instructional technique
- principles of competency-based assessment
- psychological factors affecting satisfaction of human needs, defence mechanisms and stress management
- questioning techniques
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders for flight reviews
- relevant sections of national and state/territory regulatory requirements and codes of practice
- relevant WHS and environmental procedures and regulations
- relevant workplace training and assessment policies and procedures
- requirements for completing relevant documentation
- self-assessment and evaluation
- training and assessment competency standards.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIM0011 Deliver operational flight management training

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to deliver operational flight management training in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes planning an operational flight management training scenario, preparing trainee for scenario-based flight training, and delivering training. It also includes conducting post-flight discussions and reviewing delivery of scenario-based flight training.

This unit addresses aviation non-technical skill requirements (physical, mental and task-management abilities) related to training and assessment duties of flight instructors and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

M – Training and Assessment

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Plan an operational flight management training scenario

- 1.1 Typical commercial or military flight operation conditions, including normal and abnormal operations, are identified
- 1.2 Training scenarios that require management of planned and unplanned in-flight situations are designed, including simulated abnormal and emergency operations
- 1.3 Training scenarios that involve knowledge-based solutions and flight management activities that assess and resolve less defined events are designed
- 1.4 Sufficient timeframes and realistic workloads are allocated in the scenario design to enable trainee/s to meet objectives without being overloaded
- 1.5 Realistic scenario plan is developed with sufficient detail to ensure learning outcomes can be achieved without improvisation when airborne
- 1.6 Hazards are identified, risks are assessed and hazard management implemented
- 1.7 Learning activities are designed that ensure components of competency are emphasised and reinforced

2 Prepare trainee/s for scenario-based flight training

- 2.1 Trainee/s existing level of operational knowledge is identified and gaps in knowledge are rectified as required
- 2.2 Scenario-based session plan is discussed with trainee/s
- 2.3 Objectives and outcomes of session plan are explained to trainee/s
- 2.4 Application and context of session is explained to and confirmed with trainee/s
- 2.5 Trainee/s role with regard to command status, decision implementation and trainer assumption of control, is confirmed
- 2.6 Scenario-based learning, including multiple solutions to

problems and the session not being formally assessed, is explained to and confirmed with trainee/s

3 Deliver training

- 3.1** Presentation and delivery methods are adjusted to cater for trainee/s characteristics and to meet learning outcomes
- 3.2** Trainee/s responsibility for planning and conducting a flight is explained
- 3.3** Environment that simulates a typical civil or military air task is established as required
- 3.4** Dimensions of aviation competency are emphasised and reinforced during presentation of training sessions
- 3.5** Flight scenarios are logically sequenced with clear transition and linking of events that provide variety, encourage participation and reinforce dimensions of aviation competency
- 3.6** Verbal feedback and motivation are provided to assist trainee/s in achieving session outcome
- 3.7** Intervention and assumption of control is applied as required to ensure flight safety
- 3.8** Situational awareness is maintained to ensure situations that might jeopardise safety are not allowed to develop
- 3.9** Detailed record of flight events is maintained
- 3.10** Training sessions are reviewed and modified as required to meet trainee needs

4 Conduct post-flight discussion

- 4.1** Process, rationale and benefits of post-flight discussion are explained to trainee/s
- 4.2** Trainee/s is encouraged to lead discussion, including evaluation of their own performance and quality of self-assessment
- 4.3** Assistance in recalling sequence of events is provided as required
- 4.4** Flight events, actions and results of decisions are identified, analysed and feedback is provided to trainee
- 4.5** Trainee/s is encouraged to examine whether alternative actions may have resulted in better outcomes

- 5 Review delivery of scenario-based flight training**
- 4.6** Constructive feedback and reinforcement are provided to trainee/s
 - 5.1** Training delivery is assessed against program goals, session plans and training outcomes
 - 5.2** Delivery and effectiveness of training session is discussed with appropriate personnel
 - 5.3** Adjustment of scenarios and delivery are incorporated as required to improve learning outcomes

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIM6006 Deliver operational flight management training.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIM0011 Deliver operational flight management training

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying trainer intervention and assumption of control as required to ensure flight safety
- assessing training delivery against program goals, session plans and training outcomes
- communicating effectively with others
- completing relevant documentation
- confirming trainee/s role with regard to command status, decision implementation and trainer assumption of control
- designing and delivering training scenarios that:
 - require management of planned and unplanned inflight situations
 - involve knowledge-based solutions
 - are flight management activities that assess and resolve less defined events and include simulated abnormal and emergency operations
- developing a realistic scenario plan with sufficient detail to ensure training outcomes can be achieved without improvisation when airborne
- discussing training session delivery with appropriate personnel to determine effectiveness
- emphasising and reinforcing components of competency during presentation of training sessions
- establishing an environment that simulates a typical civil or military air task/operation
- explaining scenario-based learning to trainee/s
- identifying and correctly using relevant equipment
- identifying typical commercial or military flight operation conditions, including normal and abnormal operations
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritise work
- maintaining situational awareness to ensure situations that might jeopardise safety are not allowed to develop

- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- providing constructive feedback to trainee/s on each event that occurred during a flight including analysis of actions and results of decisions
- providing leadership and working collaboratively with others when delivering operational flight management training
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- sequencing flight scenarios logically, including clear transition and linking of events that provide variety, encourage participation and reinforce competencies
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- appropriate methods of analysis and training planning
- assessment of behaviour
- common problems that may occur when delivering operational flight management training, and appropriate action that should be taken in each case
- common risks that exist when delivering operational flight management training
- human performance and limitations factors relevant to the training tasks
- in an Australian Defence Force context, relevant Defence Orders and Instructions
- lesson planning and development
- a realistic scenario plan must provide opportunities for trainees, to:
 - conduct a flight without assistance
 - independently complete all associated tasks
- preparation of training resources
- dimensions of aviation competency, including:
 - contingency management skills
 - job/role environment skills
 - task management skills
 - task skills
 - threat and error management skills

- transfer and application of skills and knowledge to new contexts
- principles of adult teaching and learning
- principles of assessment
- psychological factors affecting satisfaction of human needs, defence mechanisms and stress management
- questioning techniques
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders related to pilot competency standards
- relevant sections of national and state/territory regulatory requirements and codes of practice
- relevant WHS and environmental procedures and regulations applicable to operational flight management training
- relevant workplace policies and procedures
- self-assessment and evaluation
- training and assessment competency standards
- what trainee/s is required to do in abnormal and emergency operations, including:
 - assess situations and make decisions
 - maintain effective communication and interpersonal relationships
 - maintain situational awareness
 - manage threats and errors
 - set priorities and manage tasks.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIN0003 Command an aircraft in a multi-crew environment

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to command an aircraft in a multi-crew environment in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes establishing aircraft command, managing tasks and workload, and communicating organisational objectives and required standards. It also includes making effective decisions, and leading flight crews and individuals.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to leadership and supervision duties of a pilot in command (PIC) and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently and without supervision within a multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

N – Leadership and Supervision

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Establish aircraft command	<p>1.1 Command responsibilities are exercised in accordance with organisational authority and guidelines</p> <p>1.2 Command structure is established appropriate to aircraft</p> <p>1.3 Command structure is communicated to flight crew and external authorities</p> <p>1.4 Communication mechanisms and procedures are implemented between levels of command in accordance with organisational procedures</p> <p>1.5 Liaison is established and maintained between PIC, flight crew and other relevant stakeholders to meet control and command requirements</p>
2 Manage tasks and workload	<p>2.1 Workload of flight crew members is planned taking into account time and resource constraints</p> <p>2.2 Flight crew is assigned workload priorities and performance expectations are communicated clearly</p> <p>2.3 Workload of flight crew is coordinated in accordance with agreed operational objectives and task timelines</p> <p>2.4 Performance of flight crew and individuals is systematically monitored against defined measurable performance criteria to ensure satisfactory completion of assigned tasks and workloads</p> <p>2.5 Potential and current issues and problems arising in relation to task and workload management are identified and acted on in accordance with regulatory and organisational requirements</p>
3 Communicate organisational objectives and required standards	<p>3.1 Flight crew members are provided with up-to-date information concerning organisational objectives and standards</p> <p>3.2 Flight crew member understanding of objectives and standards is confirmed</p> <p>3.3 Organisational standards and values are modelled and promoted to flight crew members</p>
4 Make effective decisions	<p>4.1 Relevant, current and sufficient information is gathered</p>

- to assess and analyse situation for decision making
- 4.2 Problem-solving strategies and techniques are used to identify and generate options
 - 4.3 Decisions are made, communicated to flight crew and implemented in a timely manner in accordance with regulatory requirements and workplace procedures
 - 4.4 Decisions and actions are evaluated for their effectiveness and outcomes
 - 4.5 Decisions, their rationale and associated actions are documented and reported in accordance with regulatory requirements and workplace procedures
- 5 Lead flight crews and individuals**
- 5.1 Link between function of flight crew and organisational goals is clarified as required and is communicated to flight crew
 - 5.2 Participative decision making is used to develop, implement and review work of flight crew and to allocate responsibilities
 - 5.3 Opportunities are given to flight crew members and individuals to provide feedback about efficient work practices and processes
 - 5.4 Flight crew members and individuals are encouraged to provide feedback about efficient work practices
 - 5.5 Appropriate delegation is made to flight crew and individuals in accordance with relevant flight crew objectives and goals, and organisational policy and procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIN0001 Command an aircraft in a multi-crew environment.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIN0003 Command an aircraft in a multi-crew environment

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- allocating sufficient resources and time to complete workload
- applying relevant aeronautical knowledge
- breaking down tasks and establishing courses of action to accomplish specified goals
- collecting information and identifying key issues and relationships relative to achieving determined roles
- conducting briefings to share common plan and to set priorities
- correcting flight crew member deviations from standards
- encouraging monitoring of performance by other flight crew members
- ensuring flight crew members are aware of their role and responsibilities throughout a flight
- ensuring responsibility for flight path management is always assigned
- establishing an atmosphere to encourage open communications
- identifying and managing threats and errors
- identifying and managing undesired aircraft states
- identifying when flight crew members become ineffective or incapacitated
- implementing work health and safety (WHS) procedures and relevant regulations
- maintaining flight crew member motivation and commitment to task
- maintaining patience and focus when processing large amounts of data or multiple tasks
- managing flight deck gradient relative to task
- managing time and resources to ensure work is completed safely and effectively
- monitoring outcomes and evaluating own performance
- monitoring effectiveness of flight crew performance
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- setting realistic performance standards
- taking action to resolve flight crew member confusion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of

the requirements of the elements and performance criteria and include knowledge of:

- aircraft instrument requirements
- aircraft loading system
- aircraft performance and landing calculations
- aircraft speed limitations
- aircraft systems
- applicability of drug and alcohol regulations
- classification of operations
- cockpit management, including:
 - flight crew coordination:
 - distribution of responsibilities
 - working with a flight crew concept
 - flight crew cooperation:
 - small group dynamics (norms, atmosphere, pressure, communication and structure)
 - conflict management
 - leadership style of management:
 - concern for performance
 - concern for people
 - democratic versus autocratic style
 - encouraging inputs and feedback
 - optimising flight crew performance in flight
 - correcting flight crew coordination deficiencies
 - communication:
 - verbal and non-verbal communication
 - one- and two-way communication
 - effects of different communication styles
 - miscommunication (including cultural misunderstandings)
- effective decision-making processes, including:
 - identifying problems and causal factors
 - assessing component parts systematically and logically
 - employing analytical techniques to identify solutions and to consider the value and implications of each
 - generating solutions and/or alternative courses of action
 - assessing alternative solutions and risks with other flight crew members
 - determining course of action
 - communicating decision and delegate tasks to flight crew
 - monitoring progress against agreed plan
 - evaluating decisions in line with changing circumstances
 - ensuring decision making is improvement-focused and directed towards achieving optimum outcomes

- emergency equipment requirements
- flight and duty time limits
- flight rules (specific to aircraft type), including:
 - documentation
 - aircraft nationality and registration
 - airworthiness of aircraft
 - personnel licensing
 - rules of the air
 - procedures for air navigation
 - air traffic services
 - aeronautical information service
 - aerodromes
 - facilitation
 - search and rescue
 - security
 - aircraft accidents and incidents – pilot in command (PIC) responsibilities
 - air service operations
- fuel planning and oil requirements for the flight
- judgement and decision making, including:
 - pilot judgement concepts:
 - types of judgement
 - motor skills and human factors
 - aeronautical decision making:
 - decision-making concepts
 - pilot responsibilities
 - behavioural aspects
 - identification of hazardous attitudes:
 - physical factors
 - psychological factors
 - social influences and interface between people
 - pilot judgement awareness:
 - risk assessment
 - cockpit stress management
 - applying decision-making concepts:
 - practical application
 - managing resources
 - safety awareness
- maintenance authorisations
- managing cargo and passengers
- privileges and limitations of the multi-crew or air transport pilot licence with

aeroplane/helicopter category rating

- requirements for an Air Operator Certificate (AOC)
- requirements for aerodromes
- type of information contained in an operations manual.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIN0004 Supervise and manage safe flight operations as pilot in command

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to supervise and manage safe flight operations as pilot in command (PIC) in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes supervising flight crew and flight operations, managing routine flight operations, and managing contingency flight operations

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to leadership and supervision duties of a PIC and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently without supervision within a multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

N – Leadership and Supervision

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

- | | |
|--|---|
| 1 Supervise flight crew and flight operations | 1.1 Cargo loading requirements are implemented in accordance with regulatory requirements and workplace procedures |
| | 1.2 Flight operations and flight crew are continuously monitored throughout the flight in accordance with regulatory requirements and workplace procedures |
| | 1.3 Flight crew are assisted with prioritisation of workload |
| | 1.4 Flight crew members are provided mentorship and leadership during routine flight operations |
| 2 Manage routine flight operations | 2.1 Environmental factors are constantly assessed for effects on flight performance |
| | 2.2 Flight operations support services are advised of changes to flight operational requirements in accordance with regulatory requirements and workplace procedures |
| | 2.3 Current, relevant and sufficient information to support effective decision making is gathered and provided to flight crew during routine flight operations |
| | 2.4 Passenger safety and comfort is monitored and managed in accordance with regulatory requirements and workplace procedures |
| | 2.5 Aircraft in-flight performance is continuously monitored and assessed in accordance with regulatory requirements and workplace procedures |
| | 2.6 Control of aircraft flight path is maintained at all times during routine flight operations |
| 3 Manage contingency flight operations | 3.1 Environmental factors are constantly assessed for effects on contingency flight operations |
| | 3.2 Safe flight profile is established during contingency flight operations and within scope of aircraft performance limitations |
| | 3.3 Flight crew members are allocated tasks and performance is supervised during contingency flight operations |
| | 3.4 Information to support decision making is gathered and provided to flight crew during contingency flight |

operations

- 3.5** Aircraft in-flight performance is continuously monitored, assessed and acted on in accordance with regulatory requirements, workplace procedures and/or equipment procedures during contingency flight operations
- 3.6** Control of aircraft flight path is maintained at all times during contingency flight operations, including abnormal and emergency situations
- 3.7** Aircraft is configured for safe flight to effect approach and landing as far as practicable

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIN0002 Supervise and manage safe flight operations as pilot in command.

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIN0004 Supervise and manage safe flight operations as pilot in command

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accepting responsibility for flight outcomes
- accepting responsibility for own performance
- advising pilot flying of deviations from planned operations
- applying relevant aeronautical knowledge
- assessing situations and making decisions
- controlling aircraft flight path during:
 - routine flight operations
 - contingency flight operations
- implementing work health and safety (WHS) procedures and relevant regulations
- maintaining an effective lookout
- maintaining and managing situational awareness
- maintaining effective communications and interpersonal relationships
- maintaining effective leadership and authority
- making effective decisions
- managing and monitoring flight crew conditions
- managing, controlling or mitigating risk
- monitoring flight path, aircraft configuration and systems to achieve desired performance using a systematic scan technique
- operating effectively as a flight crew member
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- selecting and using appropriate instruments, displays, communications equipment and aids
- setting flight crew priorities and managing flight crew tasks
- taking initiatives and responding to changing conditions
- using appropriate normal, abnormal and emergency aviation terminology.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of

the requirements of the elements and performance criteria and include knowledge of:

- basic concepts of aviation medicine
- Civil Aviation Safety Regulation (CASR) Part 61 Manual of Standards (MOS) Schedule 3 Aeronautical Knowledge relevant to human factors within air transport and multi-crew operations
- cockpit management, including:
 - flight crew coordination
 - distribution of responsibilities
 - working with a flight crew concept
 - flight crew cooperation:
 - small group dynamics (norms, atmosphere, pressure, communication, structure)
 - conflict management
- leadership style of management
 - concern for performance
 - concern for people
 - democratic versus autocratic style
 - encouraging inputs and feedback
 - optimising flight crew performance in flight
 - correcting flight crew coordination deficiencies
- communication
 - verbal and non-verbal communication
 - one and two-way communication
 - effects of different communication styles
 - miscommunication (including cultural misunderstandings)
- effective decision-making processes, including
 - identifying problems and causal factors
 - assessing component parts systematically and logically
 - employing analytical techniques to identify solutions and consider the value and implications of each
 - generating solutions and/or alternative courses of action
 - assessing alternative solutions and risks with other flight crew members
 - determining course of action
 - communicating decision and delegate tasks to flight crew
 - monitoring progress against agreed plan
 - evaluating decisions in line with changing circumstances
 - ensuring decision making is improvement-focused and directed towards achieving optimum outcomes
- fatigue risk management processes, including:
 - proactive
 - predictive

- reactive
- hazard identification, risk analysis and control
- flight operations and health, including:
 - body rhythm disturbances
 - high-altitude environments
 - incapacitation
 - intoxication
 - physiological fitness and degradation
 - psychological fitness and degradation
- general health aspects that may adversely influence individual or collective physiological/psychological condition
- how to manage causes and effects of stress and anxiety on individual or collective performance
- how to manage human factors that may influence individual or collective performance during flight operations
- human behaviour, including:
 - general concepts
 - cockpit management
 - judgement and decision making
- human information processing, including:
 - general system
 - senses
 - integration of sensory inputs: spatial disorientation and illusions
 - memory
- judgement and decision making, including:
 - pilot judgement concepts
 - types of judgement
 - motor skills and human factors
 - aeronautical decision making
 - decision-making concepts
 - pilot responsibilities
 - behavioural aspects
 - identification of hazardous attitudes
 - physical factors
 - psychological factors
 - social influences and interface between people
 - pilot judgement awareness
 - risk assessment
 - cockpit stress management
 - applying decision-making concepts

- practical application
- managing resources
- safety awareness
- pressure cabin
- relevant WHS procedures and regulations
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders
- respiratory system and circulation of the blood
- rapid decompression, effects and counter measures
- threat and error management (TEM) principles in multi-crew operations.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIN0005 Manage flight training

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to manage flight training in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes complying with applicable flight operations regulatory requirements, recording and monitoring flight training, programming and supervising flight training operations, and participating in interviews with regulatory authorities.

This unit addresses aviation non-technical skill requirements (physical, mental and task-management abilities) related to leadership and supervision duties of flight instructors and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

N – Leadership and Supervision

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Comply with applicable flight operations regulatory requirements	<p>1.1 Regulatory requirements for obtaining an aviation operator's certificate (or military equivalent) allowing flight training are explained</p> <p>1.2 Operations manual, training plan and other flight training operations documentation are explained, including how they apply to conducting operations</p> <p>1.3 Training plan and all relevant lesson plans that integrate ground and flight training are developed for issuing a licence or rating or military equivalent</p> <p>1.4 Application of training plan by a flight training operator is explained</p> <p>1.5 Requirements of flight training operator facilities, including aircraft, are explained</p> <p>1.6 Role and responsibilities of the person/s accountable for flight training in a typical flight training operation are explained</p>
2 Record and monitor flight training	<p>2.1 Current and complete flight exercise and trainee progress records are maintained using a suitable record keeping system</p> <p>2.2 Recording of training information and monitoring of trainee progress is explained</p> <p>2.3 Links between recording system, training and assessment against appropriate specified standards is explained</p> <p>2.4 Instructor analysis of trainee progress records is explained to plan training exercises</p>
3 Program and supervise flight training operations	<p>3.1 Methods of programming, supervision and ensuring the safe conduct of flight training operations are explained</p> <p>3.2 Fatigue management of trainees and instructors is outlined</p> <p>3.3 Instructor activities, performance and flight instruction are directed, controlled and standardised against published competency standards</p>

- 3.4** Safety and effectiveness of the aviation safety management system (SMS) and fatigue risk management system (FRMS) are explained, including how they enhance flight training operations
- 4 Participate in interview with regulator**
- 4.1** Requirements for issuing a flight training approval, or military equivalent, are met, including having an operational or compliance record that does not indicate a history of continuing breaches
- 4.2** Exemplars of flight training documentation consistent with regulatory requirements are provided for review
- 4.3** Flight training management standards are met and appropriate governance documentation maintained
- 4.4** Safe, effective and compliant flight operations are explained for particular operational aspects as nominated by interviewer

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIN6003 Manage flight training.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIN0005 Manage flight training

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified safety and fatigue risk hazards
- applying relevant aeronautical knowledge
- applying relevant legislation and workplace procedures for obtaining an aviation operator's certificate, or military equivalent
- communicating effectively with others
- completing relevant documentation
- developing a training plan and lesson plans that integrate ground and flight training relevant to issuing a licence or rating, or military equivalent
- directing, controlling and standardising instructor activities, performance and flight instruction against published competency standards
- explaining an operations manual, training plan and other flight training operations documentation and how they apply to conducting operations
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- issuing a flight training approval or military equivalent ,including an operational compliance record that does not indicate a history of continuing breaches maintaining current and complete flight exercise and trainee progress records, and explaining the link between the record system, training and assessment against the appropriate specified standards
- making decisions related to prioritising tasks and planning of flight training
- managing an aviation safety management system (SMS) and fatigue risk management system (FRMS)
- meeting and explaining flight training management standards using appropriate documentation, including safe, effective and compliant flight operations
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action

- monitoring work activities in terms of planned schedule
- providing leadership and working collaboratively with others when managing flight training
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- appropriate methods of analysis and training planning
- assessment of behaviour
- Australian national competency standards for pilots or military equivalent
- aviation FRMS
- aviation SMS
- common problems that may occur when managing flight training, and appropriate action that should be taken in each case
- common risks that exist when managing flight training
- human performance and limitations factors relevant to training tasks
- in an Australian Defence Force context, relevant Defence Orders and Instructions
- lesson planning and development
- preparation of training resources
- principles of adult teaching and learning
- principles of assessment
- psychological factors affecting satisfaction of human needs, defence mechanisms and stress management
- questioning techniques
- regulatory requirements for obtaining an aviation operator's certificate or military equivalent
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders related to flight training
- relevant sections of national and state/territory regulatory requirements and codes of practice
- relevant WHS and environmental protection procedures and regulations
- relevant workplace policies and procedures
- requirements for completing relevant documentation
- role and responsibilities of a person/s accountable for flight training, including:
 - dealing with problems common to a typical flight training operation

- maintenance of appropriate training standards
- maintenance of regulatory compliance flight training management documentation, including:
 - FRMS
 - lesson plans
 - operations manual
 - record keeping system
 - SMS
 - training plans
- self-assessment and evaluation
- training and assessment competency standards.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIO0003 Apply electronic metal detection

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to screen articles and cargo using electronic metal detection equipment procedures in a security screening environment.

It includes knowledge and understanding of: procedures to prepare and operate electronic metal detection equipment; appropriate screening methods; the range of potential security risks; and appropriate response procedures.

This unit addresses technical skill requirements (physical, mental and task-management abilities) related to security duties of screening officers, and contributes to safe and effective performance in complex transport security operational environments.

Operations are conducted as part of transport security across a variety of operational aviation, maritime and air cargo contexts within the Australian industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

O – Security

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.	demonstrate achievement of the element.
1 Identify legislative and organisational requirements	1.1 Basic legislative and organisational requirements relevant to the use of electronic metal detectors are identified and explained
	1.2 Organisational security procedures are identified and explained
	1.3 Duty of care requirements are identified and explained
	1.4 Own level of authority, role and responsibilities are identified and explained
	1.5 Role of designated personnel for security response is identified and explained
	1.6 Work Health and Safety (WHS)/Occupational Health and Safety (OHS)/Occupational Safety and Health (OSH) requirements are identified and explained
2 Conduct electronic metal detection procedures	2.1 Preparation and testing procedures for electronic metal detection equipment are identified and explained
	2.2 Standard operating procedures for electronic metal detection equipment are identified and utilised
	2.3 Screening methods and procedures are identified and explained
	2.4 Special screening requirements and appropriate screening methods are identified and explained
	2.5 Positive alarm response procedures are identified, and action taken as per operational procedures
3 Identify security risks	3.1 Potential security risks relevant to security screening operations are identified and explained
	3.2 General procedures for monitoring security of a screening environment are identified and explained
	3.3 Factors which increase security risk are identified and action is taken in accordance with workplace procedures
	3.4 Types and purpose of security equipment are identified and explained
	3.5 Emergency and evacuation procedures are identified and explained

- 4 Identify and report Security risks**
- 3.6** Procedures for first aid response are identified and explained
 - 4.1** Organisational procedures for reporting security risks in a security screening environment are identified and action is taken in accordance with operational procedures
 - 4.2** Chain of command of designated personnel is identified and explained
 - 4.3** Communication channels and modes are identified and utilised in accordance with operational procedures
 - 4.4** Communication equipment appropriate to the purpose is identified and explained
 - 4.5** Organisational documentation requirements are identified and utilised in accordance with operational procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This is a new unit.

Links

Assessment Requirements for AVIO0003 Apply electronic metal detection

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- accurately describing in verbal and written format security risks and incidents
- conducting general procedures for monitoring security in a securing screening environment
- conducting response procedures for the detection of prohibited items
- following basic security legislative requirements applicable to the security screening environment
- interpreting selected pictorial, graphical and written signs and instructions using electronic metal detection equipment
- preparing, testing and using electronic metal detectors
- relaying information to others
- reporting identified security risks or incidents in a security screening environment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- communication, interpersonal and literacy skills to ask effective questions and clarify security procedures
- the range of potential security risks or incidents relevant to a security screening environment
- general methods for observing potential security risks or suspicious behaviour
- chain of command and communication channels
- organisational policy on security equipment operation, systems and procedures
- applicable commonwealth, state or territory legislation relevant to own work environment and role
- methods, techniques and equipment involved when screening cargo using an electronic metal detector including special requirements
- applicable Work Health and Safety (WHS)/Occupational Health and Safety (OHS)/Occupational Safety and Health (OSH) requirements

- communication modes and security equipment and systems relevant to own work environment
- customer service principles and standards
- duty of care requirements of self and others
- general methods for observing incidents and monitoring risks within a security screening environment
- general procedures for emergency, evacuation and first aid response
- general procedures for reporting identified security risks or suspicious behaviour
- general procedures for reporting the detection of prohibited items
- organisational procedures for responding to positive alarms
- own responsibilities to comply with safe working practices
- role of designated personnel for security response.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- acceptable means of simulation assessment
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

AVIO0004 Conduct frisk search of persons

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to conduct frisk searches of persons, in compliance with relevant transport security regulatory requirements.

It includes: preparing for a frisk search; conducting a frisk search of a person; applying special frisk search methods; responding to detection of weapons or prohibited items during a frisk search; and maintaining required frisk search records.

This unit addresses transport security technical skill requirements (physical, mental and task-management abilities) related to transport security duties of aviation, maritime and air cargo security personnel, and contributes to safe and effective performance in operational transport security environments.

Operations are conducted as part of transport security across a variety of operational aviation, maritime and air cargo contexts within the Australian industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

O – Security

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare for a frisk search

- 1.1** Legal powers to frisk search persons and associated workplace procedures are clarified as required and applied
- 1.2** Frisk search is only conducted on persons of the same gender and with another appropriate person of the same gender present
- 1.3** Person to be searched is informed that frisk searches can be intrusive and may cover any part of the body, including the chest and groin
- 1.4** Express consent of person to be searched is obtained prior to conducting a frisk search and a private area where the frisk search is to be conducted, is offered and identified in accordance with legislative requirements and workplace procedures
- 1.5** Consent is recorded in accordance with regulatory requirements and workplace procedures
- 1.6** Workplace procedures are followed when a person refuses to be frisk searched
- 1.7** Person being searched is asked to remove bulky over garments and other items in their possession capable of being divested and these garments are separately checked by primary screening processes

2 Conduct a frisk search of a person

- 2.1** Frisk search of a person is carried out using methods and techniques detailed in workplace procedures and social or cultural issues are taken into account
- 2.2** Frisk search is conducted by gently running open hands over outer garments covering the relevant part of the person, to an extent sufficient to be satisfied that no prohibited items are located on the relevant part of the person
- 2.3** Handheld metal detector is used to assist in identifying area to be searched, which may include sensitive areas of a person's body
- 2.4** When alarm source cannot be resolved, access into the sterile area is denied and a more thorough and private search is conducted in accordance with legislative

requirements and workplace procedures, and person is escorted to a private area to identify and remove alarm source

- 2.5 Correct work health and safety (WHS)/occupational health and safety (OHS), Occupational Safety and Health (OSH) principles are followed during a frisk search of persons, in accordance with workplace procedures
 - 2.6 Customer service principles and standards are applied throughout a frisk search of a person, in accordance with workplace procedures
 - 2.7 Cleared person is allowed to proceed to sterile area
 - 2.8 Uncleared person is denied sterile area and detained in accordance with legislative requirements and workplace procedures
- 3 Apply special frisk search methods**
- 3.1 Special screening methods and requirements are applied when conducting a frisk search of infants and children in accordance with workplace procedures
 - 3.2 Special screening methods and requirements are applied when conducting a frisk search of people who have a disability or specific needs, in accordance with workplace procedures
- 4 Respond to detection of weapons or prohibited items during a frisk search**
- 4.1 Person detected carrying weapons and/or prohibited items is detained in accordance with workplace procedures
 - 4.2 Detected prohibited item or weapon is handled and stored in accordance with procedures
- 5 Maintain records of a frisk search**
- 5.1 Frisk search records requirements and processes are confirmed
 - 5.2 Frisk search records including written consents, are maintained in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIO2004 Conduct frisk search of persons.

Assessment Requirements for AVIO0004 Conduct frisk search of persons

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- communicating effectively with others
- completing relevant documentation
- identifying, selecting, using and routinely checking relevant equipment, processes and procedures
- implementing work health and safety (WHS)/occupational health and safety (OHS)/Occupational Safety and Health (OSH) procedures and relevant regulations
- implementing workplace contingency procedures
- implementing workplace transport security program and associated standard operating procedures
- modifying activities depending on workplace contingencies, risk situations and environments
- preparing a person for a frisk search, including obtaining permission from person being searched and informing person about frisk search processes and procedures
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly, in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- responding appropriately to detection of weapons or prohibited items during frisk search
- using appropriate customer service skills when conducting frisk searches of persons in an aviation environment
- working collaboratively with others when conducting frisk searches of persons in an aviation environment.
- applying special frisk search methods to infants or children
- applying special frisk search methods to people with specific needs who may be frisk searched including three or more of the following:
 - person in a wheelchair who may or may not be able to stand unassisted
 - person who uses a walking aid
 - person who is hearing impaired
 - person with a prosthetic device, body brace or other medical device

- person who is vision impaired
- person who requires the assistance of a carer
- person who is accompanied by an assistance or companion animal (such as a guide dog)
- person who is vision impaired who needs to carry unusual electronic devices in their personal effects (for example Braille note taker).

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- components, operating principles and characteristics of typical weapons (especially potential explosive devices) that may be potentially carried on a person
- contact processes for relevant security area dependant on role as per below:
 - applicable to Aviation transport security protection only
 - airline
 - airport staff
 - relevant law enforcement agencies
 - applicable to Maritime transport security protection only
 - terminal staff
 - relevant law enforcement agencies
 - Australian Maritime Safety Authority (AMSA)
- customer service standards and techniques to be applied when carrying out frisk searches of persons in a transport security environment
- law enforcement officers and other government officers, their roles and responsibilities within a transport security workplace
- workplace transport security program, screening standard operating procedures and contingency procedures as they relate to detecting weapons and/or prohibited items in a frisk search
- site layout, including applicable security zones and standard operating procedures for transport security screening process concerned and private rooms or a search room that can be used to frisk search people
- types of weapons and prohibited items that may be detected during a frisk search and distinguishing characteristics of such weapons and prohibited items as outlined in the Regulations
- typical issues that may occur when conducting frisk searches of persons in a transport security environment and appropriate action that can be taken to resolve and avoid these issues
- workplace transport security standard operating procedures and policies applicable to conducting frisk searches of persons
- relevant workplace procedures and legislative requirements
- social and cultural issues including:
 - dress and personal presentation

- gender and gender identity
- food
- language
- religion
- social conventions
- traditional practices
- values and beliefs.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

AVIO0005 Conduct screening using explosive trace detection

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to conduct screening using explosive trace detection (ETD) at a security-controlled airport with screened air services, in compliance with relevant regulatory requirements.

It includes: setting up, checking and operating ETD equipment; conducting ETD sampling process and responding to results of sample; and recording ETD analysis information for evidential purposes.

This unit addresses transport security technical skill requirements (physical, mental and task-management abilities) related to transport security duties of transport, maritime and air cargo security personnel, and contributes to safe and effective performance in operational transport security environments.

Operations are conducted as part of transport security across a variety of operational aviation, maritime and air cargo contexts within the Australian industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

O – Security

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Set up, check and operate ETD equipment

- 1.1 Correct procedures for setting up ETD equipment in a transport workplace are followed in accordance with legislative requirements and workplace procedures
- 1.2 Required ETD equipment checks are carried out and appropriate action is taken in accordance with legislative requirements and workplace procedures
- 1.3 ETD equipment calibration is performed at set up and during operations in accordance with legislative requirements and workplace procedures
- 1.4 ETD equipment is operated in accordance with legislative requirements and workplace procedures
- 1.5 Work health and safety (WHS)/occupational health and safety (OHS)/Occupational Safety and Health (OSH) procedures are followed when setting up and operating ETD equipment in accordance with legislative requirements and workplace procedures

2 Conduct ETD sampling process

- 2.1 Selected persons or articles are screened using an ETD wand, in accordance with legislative requirements and workplace procedures
- 2.2 Sample is tested using ETD equipment in accordance with legislative requirements and workplace procedures

3 Respond to results of sample

- 3.1 Positive and negative results are recognised in accordance with legislative requirements and workplace procedures
- 3.2 Action is taken in response to a positive result in accordance with legislative requirements and workplace procedures

4 Record ETD analysis information for evidential purposes

- 4.1 Equipment checks and calibration results are recorded and reported in accordance with legislative requirements and workplace procedures
- 4.2 Calibrations and alarms are saved in accordance with legislative requirements and workplace procedures
- 4.3 Records of sampling processes, positive and negative results and consequent actions are completed in accordance with legislative requirements and workplace

procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIO2005 Conduct screening using explosive trace detection (ETD).

Assessment Requirements for AVIO0005 Conduct screening using explosive trace detection

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- applying appropriate customer service skills when using explosive trace detection (ETD) equipment
- communicating effectively with others
- completing relevant documentation
- identifying, selecting, using and routinely checking ETD equipment, processes and procedures
- modifying activities in response to workplace contingencies, risk situations and environments
- preparing persons or articles for ETD sampling
- reading, clarifying and applying the Act, notices made under the Act and workplace procedures relevant to using ETD equipment
- responding to and reporting security incidents and/or suspected explosive substances detected using ETD equipment
- taking appropriate action in response to security incidents identified using ETD equipment
- using the correct documents to accurately record and report information. in accordance with workplace procedures
- working collaboratively with others when using ETD equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- airside security zones on an airport:
 - enhanced inspection area
 - security restricted area
- contact processes for airline and airport staff, and relevant law enforcement agencies
- contingency procedures for a double positive result when carrying out screening using ETD equipment

- customer service standards and techniques to be applied when carrying out ETD screening of persons or articles
- ETD equipment – equipment that can detect and indicate by an alarm, the presence of a target amount of explosive material as outlined in the relevant screening regulations
- ETD equipment alarm – where equipment produces an audible and/or visual alarm to indicate the presence of a target amount of explosive material within the equipment range, in accordance with equipment operating program and as outlined in the relevant screening regulations
- ETD system – where technologies have the ability to detect and indicate by means of an alarm, the presence of a target amount of explosive material contained in baggage or on a person or other articles subjected for analysis, as outlined in the relevant screening regulations
- landside security zones on an airport:
 - air traffic control facilities zone
 - fuel storage zone
 - navigational aids zone
 - sterile area
- methods, techniques and equipment involved when using ETD equipment to screen passengers and/or articles in a transport security environment in accordance with relevant Transport Security Regulations
- prohibited items and weapons as outlined in the Act
- reporting requirements for security incidents relevant to ETD images and/or alarms generated by ETD equipment indicating the possible presence of weapons or explosive substances that might pose a threat to transport security
- roles and responsibilities of law enforcement officers and/or other government officers within a transport security workplace
- sections of the legislation relevant to using ETD equipment to screen passengers, bags and articles in a transport security environment
- site layout, including applicable security zones and workplace procedures for transport security screening
- trace sampling process – where part of an object is wiped and the particles are collected in a trap that can be handheld or included as part of a wand, as outlined in the Transport Screening regulations
- typical issues that may occur when using ETD equipment and appropriate action that can be taken to resolve and/or avoid these issue
- workplace procedures applicable for using ETD equipment to screen passengers or articles
- articles must include at least three of the following:
 - bags
 - cabin baggage
 - checked baggage
 - display/promotional items
 - goods
 - hold baggage

- packages
- personal effects
- tools of trade
- vehicles/machinery
- work equipment
- workplace procedures for carrying out checks and calibrations of ETD equipment.
- workplace procedures including:
 - applicable legislative requirements and transport screening notices
 - access and equity policies, principles and practices
 - client service standards
 - code of conduct or ethics
 - communication and reporting procedures
 - complaint and dispute resolution procedures
 - emergency and evacuation procedures
 - employer and employee rights and responsibilities
 - equipment use and maintenance
 - WHS/OHS/OSH policies and procedures
 - own role, responsibility and authority
 - privacy and confidentiality
 - standard operating procedures for screening.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

AVIO0006 Conduct vehicle search for access to security sensitive areas

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to conduct vehicle searches, in compliance with relevant regulatory requirements and national operating standards.

It includes: planning and prepare for vehicle search; implementing a search; recognising and acting on abnormal situations; and completing post search activities.

This unit addresses technical skill requirements (physical, mental and task-management abilities) related to security duties of screening officers, and contributes to safe and effective performance in complex transport security operational environments.

Operations are conducted as part of recreational and commercial across a variety of operational contexts within the Australian aviation industry and maritime environment.

Screening is performed independently or under limited supervision until accredited as a screener then as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.	demonstrate achievement of the element.
1 Prepare for vehicle search	1.1 Hazard identification and risk assessment strategies are developed and implemented to ensure search can be conducted safely in accordance with regulatory requirements and workplace procedures
	1.2 Authority to search is verified, obtained and intention to search is advised to relevant people in accordance with regulatory requirements and workplace procedures
2 Undertake vehicle search	2.1 Conduct search of vehicle systematically in accordance with regulatory requirements and standard operating procedures
	2.2 Relevant equipment and associated technology is utilised effectively in accordance with workplace procedures
	2.3 Documentation and search records are updated in accordance with regulatory requirements and workplace procedures
3 Respond to detection of prohibited or unauthorised items	3.1 Prohibited and unauthorised items are identified and assessed, and response is prioritised in accordance with regulatory requirements and workplace procedures
	3.2 Implications of the prohibited and unauthorised items are evaluated in accordance with WHS/OHS/OSH processes and workplace procedures
	3.3 Prohibited and unauthorised items are seized within limits of own responsibility and duty of care in accordance with regulatory requirements and workplace procedures
	3.4 Relevant regulatory authorities are notified of result in accordance with regulatory requirements
	3.5 Communications are maintained with relevant personnel to determine appropriate course of action
4 Complete post search activities	4.1 Records of security search checks and precautions are documented in accordance with workplace procedures
	4.2 Property damaged during vehicle search is reported in accordance with workplace procedures
	4.3 Clear, accurate and comprehensive information is provided to relevant people in accordance with

workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for AVIO0006 Conduct vehicle search for access to security sensitive areas

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- applying hazard and risk mitigation processes and requirements for identifying and responding to them
- applying regulatory requirements, including work health and safety and environmental procedures, in the context of searching and vehicle and seizure of prohibited items
- using search methods specified in operating procedures
- using equipment for the purpose and in the manner intended and authorised
- using information systems to report items found and record incidents
- identifying weapons, explosives, prohibited items accurately
- applying relevant regulatory requirements and workplace procedures in handling and storage of Weapons, explosives and prohibited items
- using correct techniques and procedures in accordance with work health and safety (WHS)/occupational health and safety (OHS)/Occupational Safety and Health (OSH) procedures, legislative requirements and workplace procedures
- applying relevant procedures in the process of seizing prohibited and unauthorised items to limit of authority
- presenting clear, concise and accurate information in relation to post search activities
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- using safe, thorough and systematic search techniques
- working collaboratively with others.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- OHS/WHS/OSH requirements and regulatory requirements for vehicle security checks and precautions within limits of own role and workplace procedures
- relevant legislation and workplace procedures

- relevant authority to vehicle search procedures, in the context of search and seizure of prohibited and unauthorised items
- selecting and using relevant search and other equipment
- documenting and reporting outcomes of search procedures
- unauthorised and illegal items and substances in accordance with organisation's policies, procedures and legal requirements
- analysis and observation techniques in vehicle searches for prohibited and unauthorised items
- relevant procedures in the process of seizing prohibited and unauthorised items to limit of authority
- notification processes of results in accordance with regulatory requirements and workplace procedures
- effective communication techniques with others when following vehicle search security procedures
- documentation and recording processes for vehicle search details
- response plan and procedures for damaged property associated with vehicle search
- systematic search techniques.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

AVIO0007 Control access to and exit from a security sensitive area

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to control access to and exit from, a security sensitive area, in compliance with relevant regulatory requirements and national operating standards.

It includes: managing persons; inspecting articles; and managing access control systems in a security sensitive area operating environment.

This unit addresses technical skill requirements (physical, mental and task-management abilities) related to security duties of screening officers, and contributes to safe and effective performance in complex transport security operational environments.

Operations are conducted as part of recreational and commercial activities across a variety of operational contexts within the Australian aviation industry and maritime environment.

Screening is performed independently or under limited supervision until accredited as a screener then as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Manage persons to enter a security sensitive area

- 1.1** Appropriate personal protective equipment is selected and used in accordance with workplace procedures
- 1.2** Identification details of persons entering security sensitive areas are verified in accordance with legislative requirements and workplace procedures
- 1.3** Entry validations are issued and collected in accordance with workplace procedures
- 1.4** Incidents that infringe or breach workplace procedures are acted on, reported and recorded in accordance with legislative requirements and workplace procedures
- 1.5** Persons are received in a professional and courteous manner and processed in accordance with workplace procedures
- 1.6** Relevant documentation is maintained in accordance with the organisation's transport security program
- 1.7** Persons whose identification details cannot be verified are processed in accordance with legislative requirements and workplace procedures

2 Inspect articles to enter a security sensitive area

- 2.1** Requests to inspect baggage are made in accordance with legislative requirements and workplace procedures
- 2.2** Inspections are carried out in accordance with legislative requirements and workplace procedures
- 2.3** Prohibited items or weapons found during inspections are dealt with in accordance with legislative requirements and workplace procedures
- 2.4** Notification of the detection of prohibited items or weapons found during inspection is carried out in accordance with legislative requirements and workplace procedures
- 2.5** Persons refusing inspection requests are reported and processed in accordance with legislative requirements and workplace procedures

3 Manage access control systems in a security

- 3.1** Keys and access control devices for security sensitive areas are controlled, recorded, monitored and reconciled

sensitive area

in accordance with workplace procedures

- 3.2 Barriers are operated and controlled in accordance with workplace procedures
- 3.3 Control systems to secure security sensitive areas are operated in accordance with manufacturer instructions and workplace procedures
- 3.4 Keypad and alarm entry systems for security sensitive areas are activated and deactivated in accordance with workplace procedures
- 3.5 Relevant documentation is maintained in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIO2006 Control access to and exit from an airside security zone or landside security zone at an airport.

Assessment Requirements for AVIO0007 Control access to and exit from a security sensitive area

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- applying customer service standards
- communicating effectively with others
- completing relevant documentation
- conducting an inspection of articles carried
- identifying and correctly using relevant equipment
- identifying and verifying ID cards of persons wishing to enter a security zone within a security sensitive area
- identifying irregularities in security-related documentation and identification checks, and taking appropriate action
- identifying, selecting and following the organisation's transport security program
- identifying, selecting, using and routinely checking relevant equipment and systems, and recording required information
- implementing contingency procedures in a security issue or a breach of the legislation
- managing incoming and outgoing persons in accordance with workplace procedures
- modifying activities depending on workplace contingencies, risk situations and environments
- monitoring and anticipating security issues and risks that may arise from controlling access to and exit from security sensitive areas at an airport and taking appropriate action
- observing and monitoring the behaviour of persons in and around security controlled areas in a transport security environment
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly, in accordance with workplace procedures
- selecting and using appropriate communications and computing equipment
- taking correct action during an infringement or breach of workplace procedures
- taking appropriate initiative concerning security issues and breaches, within limits of own role and responsibility
- using security systems and barriers correctly, to maintain security of transport security sensitive areas

- using documentation correctly, in accordance with workplace procedures
- working collaboratively and liaising with others on matters relevant to the control of access to and exit from security sensitive areas security sensitive areas.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- alarm systems and locations for security sensitive areas security sensitive areas
- communication codes for security sensitive areas security sensitive areas
- procedures and protocols for operating communications and computing equipment in security sensitive areas
- appropriate actions to resolve and/or avoid issues when controlling access to and exit from security sensitive areas
- features, operating principles and processes for security systems used in an airside security zone or landside security zone at an airport
- features, operating principles and processes for security systems used in a landside security zone at a port
- information contained on personal ID cards
- organisation's transport security program and associated security policies and procedures
- relevant legislative requirements
- entry validation including:
 - temporary pass
 - voucher for access or parking
- process for verifying and reporting on ID checks including:
 - aviation security identification cards (ASIC)
 - maritime security identification cards (MSIC)
 - visitor identification cards (VIC)
 - temporary aircrew cards (TAC)
- identification must include:
 - aviation security identification card (ASIC)
 - maritime security identification card (MSIC)
 - identification (ID) card
 - industry specific card
 - visitor identification card (VIC)
 - temporary aircrew card (TAC)
- processes and procedures for controlling access to security sensitive areas as detailed in the organisation's transport security program
- reporting requirements for security issues and breaches of transport security
- risk factors and risk management strategies that may exist when controlling access to and exit from security sensitive areas

- sections of the Act, the regulations and any notices made under the Act and the regulations, relevant to controlling access to and exit from security sensitive areas
- site layout and workplace procedures for relevant security zones
- typical issues that may occur when controlling access to and exit from security sensitive areas
- workplace procedures and policies.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools and communications equipment currently used in industry.
- personal protective equipment including:
 - earmuffs
 - headwear
 - safety vest
 - sun protection
- barriers include:
 - airlock systems
 - computerised entry systems
 - keypads and card entry systems
 - remotely operated doors
 - security turnstiles
 - shutters and gates
 - tensa barriers within a terminal building
 - traffic barriers.

Assessment Requirements for AVIO0008 Establish and maintain a sterile sensitive area

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- communicating effectively with others
- identifying and correctly using relevant equipment
- identifying and establishing a sterile sensitive area at an airport in accordance with workplace procedures
- modifying activities depending on workplace contingencies, risk situations and environments
- planning, organising and monitoring work activities providing leadership and working collaboratively with others
- reading, clarifying and applying the relevant regulations and workplace procedures as they relate to the establishment of a sterile sensitive area at an airport and its re-establishing following either an intentional or unintentional breach, evacuation or equipment failure
- reporting and/or rectifying problems, faults or malfunctions promptly, in accordance with workplace procedures
- taking appropriate initiative with the organisation's standard operating procedures
- using appropriate communications equipment
- using appropriate customer service skills
- using correct recording system, accurately report on a breach, evacuation or equipment failure and when establishing and maintaining a sterile sensitive area at an airport.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- action to be taken in a breach, evacuation or equipment failure in a sterile sensitive area and its subsequent re-establishment
- transport security program procedures and policies applicable to establishing a sterile sensitive area and its re-establishment following an intentional or unintentional breach, evacuation or equipment failure
- breach of a sterile sensitive area – unauthorised entry of persons or articles into a sterile

sensitive area

- breaches of a sterile sensitive area include:
 - breach at a screening point where there is immediate detection of the unauthorised person/s concerned
 - breach at an access point (other than a screening point) where there is immediate detection of the unauthorised person/s concerned
 - breach at an access point where the unauthorised person/s concerned is under constant observation
 - breach at an access point (other than a screening point) where the unauthorised person/s concerned is under constant observation
 - where the unauthorised person/s concerned is not under constant supervision and the area of the breach can be isolated
 - where the unauthorised person/s concerned is not under constant supervision and the area of the breach cannot be isolated
- information about breaches or potential breaches include:
 - details and description of the person/s breaching security
 - details of the affected area
 - estimated number of persons in the affected area
 - breach particulars including where it occurred
 - time of breach
- customer service standards and techniques to be applied when establishing and maintaining a sterile sensitive area in a transport security protection environment
- intentional breach of a sterile sensitive area – where person/s causing a breach intended to avoid screening or where there is doubt as to the intention of person/s causing a breach
- notification requirements in a breach of a sterile sensitive area, evacuation or equipment failure and subsequent re-establishment of a sterile sensitive area
- regulations relevant to establishing a sterile sensitive area in an aviation environment and its re-establishment following either an intentional or unintentional breach, evacuation or equipment failure
- reporting requirements as detailed in the organisation's transport security program
- roles, functions and responsibilities of transport security protection screening personnel for establishing a sterile sensitive area in an aviation environment
- site layout, organisational structure and workplace procedures for a transport sterile sensitive area and related access, exit and security screening points
- sterile sensitive area – a zone established to prevent cleared persons in the zone coming into contact with persons who have not been cleared, and to prevent cleared persons getting access to anything from outside the zone that has not been cleared
- sterile sensitive areas to be searched:
 - areas accessible to the public such as toilets, concession stands and areas, eating areas, open aerobridges, parenting rooms, gate lounges, passenger lounges
 - planter boxes
 - rubbish bins
 - under seating and tables

- applicable legislation, regulations and codes must include:
 - current Aviation Transport Security Act and
 - current Aviation Transport Security Regulations
 - notices made under the Act and the Regulations
 - organisation's transport security program
 - Maritime Security Act and Regulations
- typical issues that may occur when establishing a sterile sensitive area at an airport and re-establishing it following either an intentional or unintentional breach, evacuation or equipment failure, and appropriate action that can be taken to resolve and avoid these issues.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

AVIO0009 Identify and handle weapons, explosives and prohibited items

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to identify and handle weapons, explosives and prohibited items in compliance with relevant regulatory requirements and national operating standards.

It includes: taking custody of weapons, explosives and prohibited items, securing and or disposing of prohibited items, securing and maintaining weapons and reporting and recording documentation.

This unit addresses technical skill requirements (physical, mental and task-management abilities) related to security duties of screening officers, and contributes to safe and effective performance in complex transport security operational environments.

Operations are conducted as part of recreational and commercial activities across a variety of operational contexts within the Australian aviation industry and maritime environment.

Screening is performed independently or under limited supervision until accredited as a screener then as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

O – Security

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Take custody of weapons, explosives and prohibited items

- 1.1 Identify and apply safe handling, storage and security requirements for weapons, explosives and prohibited items
- 1.2 Identify and apply procedures for making firearms and other weapons safe for processing, transportation or storage.
- 1.3 Maintain personal safety in relation to handling weapons, explosives and prohibited items
- 1.4 Identify and follow workplace procedures relating to accidental discharge of firearms and incidents involving other weapons as required.
- 1.5 Maintain up-to-date knowledge of procedures for reporting and dealing with injury and apply in accordance with regulatory requirements and workplace processes
- 1.6 Identify situations requiring assistance and request support promptly

2 Secure and maintain weapons

- 2.1 Identify and follow care and storage requirements for weapons, explosives and prohibited items
- 2.2 Maintain or dispose of weapons, explosives and prohibited items in accordance with regulatory requirements and workplace procedures

3 Reporting and recording documentation

- 3.1 Follow reporting and recordkeeping procedures for the confiscation of weapons, explosives and prohibited items
- 3.2 Identify and follow procedures for reporting loss, damage or theft of weapons, explosives and prohibited items from storage facility

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This is a new unit.

Assessment Requirements for AVIO0009 Identify and handle weapons, explosives and prohibited items

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- applying safe handling techniques of weapons, explosives and prohibited items in accordance with regulatory requirements, and workplace procedures
- rendering safe a variety of weapons and firearm types
- applying safety and environmental procedures relating to firearms, ammunition and other weapons
- reading and applying complex information from legislation and procedures
- using communication to confirm information and requirements and seek assistance
- identifying hazards and applying appropriate WHS/OHS/OSH procedures and relevant regulatory requirements
- applying relevant housekeeping standards and procedures in the storage and care of weapons, explosives and prohibited items
- communicating effectively with others
- recording and reporting weapon, explosives and prohibited items movement to relevant authorities.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- a variety of weapons, firearm types, munitions and prohibited items
- requirements for handling firearms and other weapons
- responsibility as first on the scene for seeking assistance and rendering first aid in the event of incidents causing injury
- state/territory and Commonwealth legislation relating to firearms, weapons, explosives and prohibited items
- hierarchy of control
- procedures for handling and storage of identified weapons, explosives, prohibited items

- disposal and storage processes in accordance with regulatory requirements
- completing relevant documentation
- law enforcement officers and other government officers, their roles and responsibilities within a transport security workplace.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

AVIO0010 Identify powders, liquids, aerosols and gels (PLAGs)

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to identify powders, liquids, aerosols and gels (PLAGs) in compliance with relevant regulatory requirements and national operating standards.

It includes assessing PLAGs and completing disposal requirements for PLAGs.

This unit addresses transport security technical skill requirements (physical, mental and task-management abilities) related to transport security search duties, and contributes to safe and effective performance in complex transport security operational environments.

Operations are conducted as part of recreational, aviation, maritime and transport activities across a variety of operational contexts within the Australian transport security industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

O – Security

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Assess PLAGs**
 - 1.1** Relevant passengers are checked for PLAGs in accordance with regulatory requirements and workplace procedures
 - 1.2** Courteous, professional manner is maintained when checking passengers for PLAGs in accordance with workplace procedures
 - 1.3** Types of PLAGs are identified from labels, declarations and observation, in accordance with regulatory requirements and workplace procedures
 - 1.4** Types of exempt PLAGs are identified from labels, declarations and observation, in accordance with regulatory requirements and workplace procedures
- 2 Complete disposal requirements for PLAGs**
 - 2.1** Surrendered PLAGs products are handled with due care and placed in appropriate receptacle in accordance with regulatory requirements and workplace procedures
 - 2.2** Surrendered PLAGs products are disposed of in accordance with regulatory requirements and workplace procedures
 - 2.3** Documentation for disposed surrendered PLAGs products is completed in accordance with regulatory requirements and workplace procedures
 - 2.4** Relevant regulatory authorities are notified of result in accordance with regulatory requirements and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for AVIO0010 Identify powders, liquids, aerosols and gels (PLAGs)

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- applying appropriate methods for checking of PLAGs passengers including to infants or children and people with specific needs
- communicating effectively with people
- presenting a professional image to members of the public and colleagues during searches for PLAGs
- identifying and interpreting relevant documentation and labelling, containers and goods coding, markings and other information describing PLAGs, in accordance with regulatory requirements and practices
- identifying and interpreting relevant documentation and labelling, containers and goods coding, markings and other information describing exempt PLAGs
- handling PLAGs in accordance with regulatory requirements, codes and workplace procedures as required
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- modifying activities depending on workplace contingencies, risk situations and environments
- handling and storage of PLAGs in accordance with regulatory requirements, and workplace procedures
- disposing of PLAGs in accordance with regulatory requirements, and workplace procedures
- complying with regulatory requirements and completing documentation processes regarding disposal of PLAGs
- reporting to relevant authorities promptly, in accordance with workplace procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- customer service standards and techniques to be applied when identifying PLAGs from persons in a transport security environment

- risks and hazards when handling PLAGs, and related precautions to control the risk
- Work Health and Safety (WHS)/Occupational Health and Safety (OHS)/Occupational Safety and Health (OSH) procedures and guidelines
- workplace transport security standard operating procedures and policies applicable to obtaining PLAGs from persons in a Transport security environment
- disposal and storage processes of PLAGs in accordance with regulatory requirements
- preparation of relevant documentation and maintenance of records
- law enforcement officers and other government officers, their roles and responsibilities within a transport security workplace.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

AVIO0011 Manage disruptive behaviour and unlawful interference within a transport security environment

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to manage disruptive behaviour and unlawful interference with transport security protection workplaces, in compliance with relevant regulatory requirements and national operating standards.

It includes: monitoring passenger behaviour; identifying and resolving disruptive or unlawful interference; taking action to manage unlawful interference; and reporting and documenting unlawful interference within transport security protection environments.

This unit addresses transport security technical skill requirements (physical, mental and task-management abilities) related to transport security duties of aviation, maritime and air cargo security personnel, and contributes to safe and effective performance in operational transport security environments.

Operations are conducted as part of transport security across a variety of operational aviation, maritime and air cargo contexts within the Australian industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

O – Security

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Monitor passenger behaviour

- 1.1** Facilities and transportation units under individual surveillance are regularly monitored to identify and/or record inappropriate behaviour
- 1.2** Potential problem situations are quickly identified and steps are taken to resolve the situation in accordance with regulatory requirements
- 1.3** Incidents that breach transport security requirements are identified and appropriate action is taken
- 1.4** Surveillance equipment is operated within legal and workplace parameters
- 1.5** Hazards are identified, risks are assessed and hazard management is implemented

2 Identify and resolve disruptive or unlawful interference

- 2.1** Nature of disruptive behaviour or unlawful interference is accurately assessed and incident is resolved using appropriate resolution strategies or referred to appropriate personnel for resolution
- 2.2** Procedures are followed to isolate offender/s and to minimise disruption to other passengers
- 2.3** Assistance is sought from other staff and external support services as required
- 2.4** Follow-up action is implemented in accordance with workplace rules, regulations and guidelines

3 Take action to manage unlawful interference

- 3.1** Assistance is sought from other staff and external support services as required
- 3.2** Nature of offence and consequences of behaviour are clearly communicated to offender in accordance with workplace policies and procedures
- 3.3** Offenders are apprehended in accordance with legal and workplace parameters

4 Report and document unlawful interference

- 4.1** Unlawful interference incidents are reported using the appropriate document format in accordance with

workplace policies and procedures

- 4.2 Documentation is completed and processed in accordance with regulatory and organisational requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This is a new unit of competency.

Assessment Requirements for AVIO0011 Manage disruptive behaviour and unlawful interference within a transport security environment

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment in accordance with standard operating procedures
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS)/occupational health and safety (OHS) /Occupational Safety and Health (OSH) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly, in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment conforming to industry and WHS/OHS/OSH standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include

knowledge of:

- by-laws and service rules as they apply to disruptive behaviour and unlawful interference with aviation
- common law as it applies to disruptive behaviour and unlawful interference with aviation
- legal and workplace parameters regarding unlawful interference within transport security protection environments
- methods to identify and resolve disruptive behaviours:
 - aggression
 - arguments
 - confusion or other cognitive impairment
 - drunken behaviour
 - fare evasion
 - graffiti
 - hostilities
 - intoxication
 - intrusive behaviour
 - manipulation
 - noisiness
 - not complying with aviation transport security regulations
 - not complying with no smoking signs
 - physical abuse
 - self-destructive behaviour
 - verbal abuse
 - wandering
- strategies for dealing with behaviours of concern
- issues needing to be referred to an appropriate professional
- legal and ethical consideration relevant to recognising and responding to behaviours of concern including:
 - duty of care
 - human rights
 - work health and safety
- organisation reporting processes
- methods to identify and resolve unlawful interference within transport security environment workplaces including:
 - applicable to aviation transport security protection only
 - causing damage to an aircraft that is in service that puts the safety of the aircraft, or any person on board or outside the aircraft, at risk
 - committing an act at an airport, or causing any interference or damage, that puts the safe operation of the airport, or the safety of any person at the airport, at risk
 - destroying an aircraft that is in service
 - doing anything on board an aircraft that is in service that puts the safety of the aircraft,

- or any person on board or outside the aircraft, at risk
- placing, or causing to be placed, on board an aircraft that is in service anything that puts the safety of the aircraft, or any person on board or outside the aircraft, at risk
- putting the safety of an aircraft at risk by communicating false or misleading information
- putting the safety of aircraft at risk by interfering with, damaging or destroying air navigation facilities
- taking control of an aircraft by force, or threat of force, or any other form of intimidation or by any trick or false pretence
- applicable to maritime security protection only
 - causing damage to a vessel that is in service that puts the safety of the vessel, or any person on board or outside the vessel, at risk
 - committing an act at a port, or causing any interference or damage, that puts the safe operation of the port, or the safety of any person at the port, at risk
 - destroying a vessel that is in service
 - doing anything on board a vessel that is in service that puts the safety of the vessel, or any person on board or outside the vessel, at risk
 - placing, or causing to be placed, on board a vessel that is in service anything that puts the safety of the vessel, or any person on board or outside the vessel, at risk
 - putting the safety of a vessel at risk by communicating false or misleading information
 - putting the safety of a vessel at risk by interfering with, damaging or destroying navigation facilities
 - taking control of a vessel by force, or threat of force, or any other form of intimidation or by any trick or false pretence
- procedures for managing disruptive behaviour and unlawful interference with aviation
- relevant WHS/OHS/OSH and environmental protection procedures and guidelines
- relevant state/territory regulations and requirements for managing disruptive and unlawful behaviour on transport systems
- risks and hazards when managing disruptive behaviour and unlawful interference with aviation and related actions to control the risk.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace

conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

AVIO0012 Manage the flow of items for screening by X-ray screening equipment

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to manage the flow of items for screening by X-ray screening equipment, in compliance with relevant regulatory requirements and national operating standards.

It includes: monitoring item flow; controlling loading of X-ray equipment; providing assistance to persons with specific needs; and processing a diplomatic bag.

This unit addresses transport security technical skill requirements (physical, mental and task-management abilities) related to transport security duties of aviation, maritime and air cargo security personnel, and contributes to safe and effective performance in operational transport security environments.

Operations are conducted as part of transport security across a variety of operational aviation, maritime and air cargo contexts within the Australian industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

O – Security

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Monitor item flow

1.1 Flow of items is monitored and appropriate action is taken to maintain a steady flow through X-ray screening equipment

1.2 Customer service standards and procedures are applied when controlling flow of items through X-ray screening equipment

1.3 Issues interfering with flow of items through X-ray screening equipment are identified and appropriate action is taken to resolve issues concerned

2 Control loading of X-ray equipment

2.1 Loading of items onto X-ray belt is controlled in accordance with legislative requirements and workplace procedures

2.2 Appropriate advice is provided about items likely to be identified by screening equipment, in accordance legislative requirements with workplace procedures

2.3 Appropriate assistance is provided to help persons place their carry-on bags and personal effects on X-ray belt, in accordance with workplace procedures

2.4 Physical position of items is controlled in accordance with workplace procedures

3 Provide assistance to persons with specific needs

3.1 Persons with specific needs are identified and assisted in accordance with workplace procedures

3.2 Persons with specific requirements are appropriately assisted to enter screening point in accordance with workplace procedures

4 Process a diplomatic bag

4.1 Items with diplomatic status are identified and verified

4.2 Items with diplomatic status are processed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to AVIO2008 Manage the flow of items for screening by X-ray screening equipment.

Links

Companion Volume Implementation Guides are found in VETNet -

Assessment Requirements for AVIO0012 Manage the flow of items for screening by X-ray screening equipment

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- communicating effectively with others
- completing relevant documentation
- controlling loading of X-ray equipment
- identifying, selecting, using and routinely checking relevant equipment, processes and procedures when managing the flow of items through X-ray screening equipment and controlling how persons place items on the X-ray belt in an aviation environment
- implementing work health and safety (WHS)/occupational health and safety (OHS) procedures /Occupational Safety and Health (OSH) and relevant regulations
- modifying activities in response to workplace contingencies, risk situations and environments
- monitoring item flow correctly through X-ray screening equipment
- processing a diplomatic bag
- providing accurate advice to persons moving through a screening point on metallic items likely to be picked up by the screening equipment
- providing appropriate assistance to persons with specific needs including:
 - attendant needs such as travelling with a carer
 - medical needs such as requiring oxygen equipment
 - physical mobility needs such as using walking aids or a wheelchair
 - vision or hearing impairment needs such as using a service animal or assistive technologies
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly, in accordance with workplace procedures
- using appropriate customer service skills
- working collaboratively with others.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of

the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- Screening Notices, such as those outlining the methods and techniques for controlling how persons place personal items on the X-ray belt
- legislative requirements including:
 - applicable to aviation transport security protection only
 - current Aviation Transport Security Act (and amendments)
 - current Aviation Transport Security Regulations
 - notices made under the Aviation Transport Security Act and the Regulations
 - organisation's transport security program as approved under the Aviation Transport Security Act
 - other regulations relating to security screening at an airport
 - applicable to maritime transport security protection only
 - current Maritime Transport and Offshore Facilities Security Regulations 2003
 - notices made under the Regulations
 - organisation's transport security program as approved
- methods, techniques and equipment involved in managing the flow of items through a screening point in a transport security environment
- organisation's transport security program procedures and policies applicable to managing the flow of items through X-ray screening equipment
- policies and procedures for processing diplomatic bags through a screening point
- policies and procedures for screening persons with specific needs
- procedures for screening of special items such as medical equipment or organ tissue samples
- sections of the regulations relevant to screening passengers and baggage in an aviation environment including notices made under regulations
- site layout, organisational structure and workplace procedures for aviation transport security screening
- social and cultural issues that may impact on X-ray screening processes such as:
 - dress and personal presentation
 - food preferences
 - gender and gender identity
 - language
 - religion
 - social conventions
 - traditional practices
 - values and beliefs
- typical issues that may occur when managing the flow of items through X-ray screening equipment and appropriate action that can be taken to resolve and/or avoid these issues
- X-ray screening equipment with threat image projection system capability, which is capable of differentiation between organic and inorganic material.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

AVIO0013 Operate body scanner

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to operate a body scanner, in compliance with relevant regulatory requirements and national operating standards.

It includes: planning and preparing to operate scanner; scanning people; responding to detection of prohibited or unauthorised items; and applying body scanner maintenance and reporting processes.

This unit addresses technical skill requirements (physical, mental and task-management abilities) related to security duties of screening officers and contributes to safe and effective performance in complex transport security operational environments.

Operations are conducted as part of recreational and commercial activities across a variety of operational contexts within the Australian aviation industry and maritime environment.

Screening is performed independently or under limited supervision until accredited as a screener then as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

demonstrate achievement of the element.

- | | |
|---|--|
| 1 Plan and prepare to operate scanner | 1.1 Regulatory requirements relevant to scanning people at security sensitive areas are identified and complied with |
| | 1.2 Body scanner is tested and calibrated in accordance with manufacturer instructions and workplace procedures |
| | 1.3 Body scanner safety risks are identified and controlled during set up and testing, in accordance with workplace procedures |
| 2 Scan people | 2.1 Orderly flow of people is maintained through scanning point in accordance with workplace procedures |
| | 2.2 Courteous, professional and sensitive communications are used to assist persons through scanning process |
| | 2.3 Infants and people with specific needs are identified and accommodated in accordance with workplace procedures |
| | 2.4 Potential causes of delays are identified, communicated to relevant personnel and acted on to minimise their impact |
| | 2.5 Action is taken in response to persons not consenting to be scanned in accordance with workplace procedures |
| 3 Respond to detection of prohibited or unauthorised items | 3.1 Workplace procedures are followed in response to the detection of suspected weapons, explosives, prohibited items |
| | 3.2 Prohibited items are handled and stored in accordance with legislative requirements and workplace procedures |
| 4 Apply body scanner maintenance and reporting processes | 4.1 Security risks in security scanning environment are identified and reported in accordance with regulatory requirements and workplace procedures |
| | 4.2 Relevant documentation is completed accurately and succinctly in accordance with regulatory requirements and workplace procedures |
| | 4.3 Faulty equipment is identified and reported to relevant personnel in accordance with workplace procedures |
| | 4.4 Body scanner maintenance requirements are identified and implemented in accordance with workplace procedures |

- 4.5** Body scanner is shut down in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This is a new unit of competency.

Assessment Requirements for AVIO0013 Operate body scanner

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- applying relevant regulatory requirements and workplace procedures in handling and storage of weapons, explosives and prohibited items
- checking, setting up body scanner and testing to ensure detection process is calibrated
- communicating effectively with people from different social, cultural and ethnic backgrounds and of varying physical and mental abilities
- complying with applicable legislative requirements applicable to own work environment and role when setting up and operating body scanner
- complying with applicable regulatory requirements and workplace procedures
- conducting and applying routine maintenance techniques
- conducting and applying shut down procedure
- conducting pre-operational checks
- ensuring correct position and process of persons undergoing body scanner process
- identifying and controlling workplace hazards and risks
- identifying body scanner failure during testing
- identifying faults and determining appropriate repair or replacement action
- identifying potential security risks or incidents relevant to using body scanners
- identifying weapons, explosives, prohibited items accurately
- maintaining goodwill and professionalism when dealing with people at scanning point
- modifying approaches in accordance with legislative requirements and workplace procedures when screening infants, children and persons with specific needs
- monitoring and anticipating operational problems and hazards that could cause delays for passengers at screening point and taking appropriate action in implementing contingency plans
- preparing documentation and maintaining records
- presenting a professional image to members of the public and colleagues
- recognising suspicious behaviour and responding in accordance with regulatory requirements
- selecting and using required personal protective equipment conforming to industry and WHS/OHS/OSH standards
- using correct techniques and procedures in accordance with work health and safety (WHS)/occupational health and safety (OHS)/Occupational, Safety and Health (OSH)

procedures, legislative requirements and workplace procedures

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- operational principles of body scanner
- workplace procedures to be followed when body scanner does not meet the required standard during testing
- WHS/OHS/OSH procedures relevant to setting up and operating body scanner
- emergency and evacuation procedures
- duty of care, code of conduct and code of ethics requirements
- principles of effective communication including interpersonal techniques
- procedures for scanning infants, children and persons with specific needs
- principles of customer service and contributions for minimising delays of passengers
- procedures in response to person/s not consenting to body scan
- procedures for reporting the detection of suspected weapons, explosives, prohibited items
- positive alarm response procedures
- procedures for handling and storage of identified weapons, explosives, prohibited items
- manufacturer instructions and workplace procedures
- maintenance procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in

industry.

AVIO0014 Screen articles by interpreting X-ray images

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to screen articles by interpreting X-ray images at a transport security protection workplace, in compliance with relevant regulatory requirements and national operating standards.

It includes: setting up and testing X-ray screening equipment; operating X-ray screening equipment; interpreting X-ray images; and taking appropriate action when weapons, explosives and prohibited items are detected.

This unit addresses transport security technical skill requirements (physical, mental and task-management abilities) related to transport security duties of aviation, maritime and air cargo security personnel, and contributes to safe and effective performance in operational transport security environments.

Operations are conducted as part of transport security across a variety of operational aviation, maritime and air cargo contexts within the Australian industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

O – Security

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Set up and test X-ray screening equipment	1.1 X-ray screening equipment is set up in accordance with workplace procedures
	1.2 Required daily X-ray screening equipment tests are carried out in accordance with workplace procedures
	1.3 X-ray screening equipment safety risks are identified and controlled during set up and testing, in accordance with workplace procedures
2 Operate X-ray screening equipment	2.1 X-ray equipment is operated in accordance with workplace procedures
	2.2 X-ray screening equipment safety risks are identified and controlled during operation, in accordance with workplace procedures
3 Interpret X-ray images of screened articles	3.1 X-ray images of screened articles are interpreted in accordance with workplace procedures
	3.2 Image enhancement functions are used effectively in accordance with workplace procedures
	3.3 Colours on X-ray image are correctly interpreted in accordance with workplace procedures
	3.4 Article shapes and sizes on X-ray image are correctly interpreted in accordance with workplace procedures
	3.5 Prohibited items, weapons and explosives on X-ray image are correctly detected in accordance with workplace procedures
4 Take appropriate action when weapons, explosives and prohibited items are detected	4.1 Suspected explosives are reported to screening point supervisor and appropriate action is taken, in accordance with legislative requirements and workplace procedures
	4.2 Suspected weapons or prohibited items are reported to screening point supervisor and appropriate action is taken, in accordance with legislative requirements and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIO2009 Screen articles by interpreting X-ray images.

Links

Companion Volume Implementation Guides are found in VETNet -

Assessment Requirements for AVIO0014 Screen articles by interpreting X-ray images

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- communicating effectively with others
- completing relevant documentation
- identifying, selecting, using and routinely checking relevant equipment, processes and procedures when using X-ray screening equipment in a transport security protection screening environment
- identifying and responding to screening equipment failure during testing
- identifying and responding to screening equipment failures during screening of articles at an airport
- implementing work health and safety (WHS)/occupational health and safety (OHS) procedures /Occupational Safety and Health (OSH) and relevant regulations
- manipulating X-ray images using enhancement functions to identify weapons and prohibited items correctly
- modifying activities in response to different workplace contingencies, risk situations and environments
- operating X-ray screening equipment correctly in accordance with workplace procedures
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- responding to and reporting security incidents and/or suspected presence of weapons, explosives and prohibited items detected using X-ray screening equipment at an airport
- taking appropriate action when X-ray screening equipment identifies a weapon, explosive or prohibited item
- using correct procedures, set up and test X-ray screening equipment while meeting WHS/OHS/OSH requirements
- using X-ray screening equipment accurately to detect and identify prohibited weapons, explosives or prohibited items in articles being screened
- working collaboratively and liaising with others when interpreting X-ray images at an airport.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- components, operating principles and characteristics of typical weapons, explosives and prohibited items that may be contained in articles being screened
- features of X-ray images that indicate the possible presence of weapons, explosives or prohibited items in articles, including the meaning of colour (metals, organics and inorganics), shape and size
- Legislative requirements including:
 - applicable to aviation transport security protection only
 - current Aviation Transport Security Act (and amendments)
 - current Aviation Transport Security Regulations
 - notices made under the Aviation Transport Security Act and the Regulations
 - organisation's transport security program as approved under the Aviation Transport Security Act
 - other regulations relating to security screening at an airport
 - applicable to maritime transport security protection only
 - current Maritime Transport and Offshore Facilities Security Regulations 2003
 - notices made under the Regulations
 - organisation's transport security program as approved
- methods, techniques and equipment involved when using X-ray screening equipment to screen articles
- organisation's transport security procedures and policies applicable for using X-ray screening equipment to screen articles
- peculiarities and limitations of the X-ray imaging process and how to overcome these using workplace procedures when interpreting X-ray images of articles
- prohibited items and weapons as outlined in legislation
- relevant law enforcement agency contacts details
- reporting requirements as detailed in the organisation's transport security program and workplace procedures for security incidents
- reporting requirements for detecting the presence of weapons, explosives or prohibited items using X-ray equipment
- roles and responsibilities of airline and airport staff, law enforcement officers and/or other government officers in a transport security protection environment
- sections of the legislation relevant for using X-ray screening equipment to screen personal effects and checked baggage in a transport security protection environment
- site layout, organisational structures, organisation's transport security program and associated workplace procedures in a transport security protection screening environment
- threat image projection system capability – a software program capable of projecting virtual images of threat articles such as a gun, knife, or improvised explosive device within the X-ray image of a bag under examination and of providing immediate feedback to observer

- transport security procedures to be followed when an item cannot be cleared using X-ray screening equipment
- typical issues that may occur when using X-ray equipment to screen articles at an airport and appropriate action to take to resolve and avoid these issues
- WHS/OHS/OSH requirements relevant to setting up and operating X-ray screening equipment
- workplace procedures for carrying out daily, weekly or monthly tests of X-ray screening equipment
- workplace procedures to be followed when screening equipment does not meet the required standard during testing
- workplace procedures to be followed when screening equipment fails during screening of articles to enter a security zone.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry
- X-ray screening equipment includes:
 - X-ray screening equipment that has threat image projection system capability and is capable of differentiation between organic and inorganic material
 - single or multi view X-ray equipment.

AVIO0015 Undertake physical search of cargo and articles

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to conduct cargo and article searches, in compliance with relevant regulatory requirements and national operating standards.

It includes: planning and prepare for cargo or article search; implementing a search; recognising and acting on abnormal situations; and completing post search activities.

This unit addresses technical skill requirements (physical, mental and task-management abilities) related to security duties of screening officers, and contributes to safe and effective performance in complex transport security operational environments.

Operations are conducted as part of recreational and commercial screening activities across a variety of operational contexts within the Australian aviation industry and maritime environment.

Screening is performed independently or under limited supervision until accredited as a screener then as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

O – Security

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Prepare for search of cargo**
 - 1.1** Search purpose is identified, and powers confirmed in accordance with regulatory requirements and workplace procedures
 - 1.2** Potential areas where prohibited items might be hidden are assessed in accordance with workplace procedures
 - 1.3** Authority to search and seize prohibited items is verified and obtained in accordance with regulatory requirements and workplace procedures
 - 1.4** Operational plan is developed to address the range of requirements for a search in accordance with regulatory requirements and workplace procedures
 - 1.5** Hazards are identified, and risk control measures are implemented to ensure the search can be conducted safely in accordance with regulatory requirements and workplace procedures
 - 1.6** Requirements for assistance with the search are identified and organised in accordance with regulatory requirements and workplace procedures
- 2 Implement search of cargo**
 - 2.1** Search of designated cargo is conducted systematically in accordance with regulatory requirements and workplace procedures
 - 2.2** Relevant search equipment and resources are used in accordance with workplace procedures and manufacturer requirements
 - 2.3** Search is undertaken in accordance with lead agency requirements, where assistance is obtained
 - 2.4** Records of the search process, items and/or evidence uncovered in the search, and subsequent action are made in accordance with regulatory requirements and workplace procedures.
- 3 Conduct seizure of prohibited items**
 - 3.1** Seizure of prohibited items is considered, justified and undertaken in accordance with regulatory requirements and workplace procedures
 - 3.2** Evidence associated with prohibited items and relevant information is seized and dealt with in accordance with regulatory requirements and workplace procedures
 - 3.3** Prohibited items are removed, secured and disposed of if

- required in accordance with regulatory requirements and workplace procedures
- 3.4** Safety of self and other personnel associated with search is maintained in accordance with regulatory requirements and workplace procedures
- 4 Complete post search activities**
- 4.1** Records associated with the search and seizure of prohibited items are completed and reported to relevant personnel in accordance with regulatory requirements and workplace procedures
- 4.2** Follow up actions are identified, recorded and acted upon as required in accordance with regulatory requirements and workplace procedures
- 4.3** Third party claims relating to seized items and property damage are undertaken in accordance with regulatory requirements and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This is a new unit of competence

Assessment Requirements for AVIO0015 Undertake physical search of cargo and articles

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- applying relevant legislation and workplace procedures
- identifying potential areas to hide prohibited items within search parameters in accordance with security procedures
- applying relevant authority to physical search of premises procedures, in the context of search and seizure of prohibited and unauthorised items
- determining range of requirements relating to search parameters and ensuring inclusion in operational plan
- identifying and applying risk mitigation strategies in line with the physical search of premises
- identifying and using communication to confirm information and requirements for further assistance
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- using safe, thorough and systematic search techniques
- selecting and using relevant search and other equipment
- following directions of lead agency in accordance with regulatory requirements and workplace procedures
- documenting and reporting process and outcomes of search procedures
- applying relevant procedures in the process of seizing prohibited and unauthorised items to limit of authority
- undertaking analysis and observation during search for prohibited and unauthorised items
- following relevant regulatory requirements and workplace procedures for the removal and storage of prohibited items
- conforming to industry and WHS/OHS/OSH standards
- identifying and controlling workplace hazards and risks
- documenting and recording search details in accordance with regulatory requirements
- reporting notification of results promptly, in accordance with regulatory requirements and workplace procedures
- following established response plan and procedures to damaged property associated with search.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- applicable transport security legislation including relevant international, national, state/territory acts, regulations codes and/or guidelines
- operational plans
- work health and safety policies related to hazards associated with searches
- hierarchy of control
- workplace transport security standard operating procedures and policies applicable to seizure of prohibited items in a transport security environment
- recording procedures
- property damage reporting procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

AVIO0016 Manage security procedures as pilot in command

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to manage security procedures as pilot in command (PIC) in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes assessing security and safety risks, carrying out surveillance of flight safety and security, and managing unlawful interference with aviation as PIC.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to aviation security duties of a PIC and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently and without supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIO0016 Manage security procedures as pilot in command

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures while managing security procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- identifying and resolving at least one incidence of unlawful interference with aviation as pilot in command (PIC):
 - taking control of an aircraft by force, or threat of force, or any other form of intimidation or by any trick or false pretence
 - destroying an aircraft that is in service
 - causing damage to an aircraft that is in service that puts the safety of the aircraft, or any person on board or outside the aircraft, at risk
 - doing anything on board an aircraft that is in service that puts the safety of the aircraft, or any person on board or outside the aircraft, at risk
 - placing, or causing to be placed, on board an aircraft that is in service anything that puts the safety of the aircraft, or any person on board or outside the aircraft, at risk
 - putting the safety of aircraft at risk by interfering with, damaging or destroying air navigation facilities
 - putting the safety of an aircraft at risk by communicating false or misleading information
 - committing an act at an airport, or causing any interference or damage, that puts the safe operation of the airport, or the safety of any person at the airport, at risk
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments

- monitoring passenger behaviour consistent with individual work role
- operating electronic communications equipment to required protocol while managing security procedures
- reporting and documenting unlawful interference with aviation
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying any problems, fault or malfunctions promptly in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others when managing security procedures and unlawful interference with aviation
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- aviation transport security regulations, policies and procedures as they apply to managing security procedures as PIC
- behaviour of terrorists in aviation environments
- flight deck and cabin procedures to protect the aircraft
- identification of potential and actual security breaches and/or threats to flight safety
- importance of security and safety in domestic and international aviation transport
- individual defensive techniques and personal defence strategies
- least risk bomb locations for aircraft
- legal and workplace parameters as they apply to managing security procedures as PIC
- disruptive passenger behaviours, including:
 - arguments
 - hostilities
 - fare evasion
 - verbal abuse
 - physical abuse
 - graffiti
 - lack of compliance with no smoking signs
 - lack of compliance with aviation transport security regulations
 - drunken behaviour
- unlawful interference with aviation, including:
 - taking control of an aircraft by force, or threat of force, or any other form of intimidation

- or by any trick or false pretence
- destroying an aircraft that is in service
- causing damage to an aircraft that is in service that puts the safety of the aircraft, or any person on board or outside the aircraft, at risk
- doing anything on board an aircraft that is in service that puts the safety of the aircraft, or any person on board or outside the aircraft, at risk
- placing, or causing to be placed, on board an aircraft that is in service anything that puts the safety of the aircraft, or any person on board or outside the aircraft, at risk
- putting the safety of aircraft at risk by interfering with, damaging or destroying air navigation facilities
- putting the safety of an aircraft at risk by communicating false or misleading information
- committing an act at an airport, or causing any interference or damage, that puts the safe operation of the airport, or the safety of any person at the airport, at risk
- nature and types of safety and security risks, including:
 - bomb threats
 - breaches of physical/electronic security
 - commercial security
 - domestic security issues
 - enterprise security
 - international security situation
 - political environment
 - terrorism threats
- procedures for deliberate or impromptu search of an aircraft
- procedures for managing security and safety procedures as PIC
- processes and methods for reporting security breaches
- relevant WHS/OHS procedures and guidelines
- relevant Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders for PIC authority and responsibilities
- risks and hazards when managing security procedures and related actions to control or mitigate security risk
- security identification methods, techniques and policies
- use of non-lethal protective devices to the extent permitted by law
- workplace procedures for surveillance by PIC.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate,

assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIO0017 Manage disruptive behaviour and unlawful interference with aviation

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to manage disruptive behaviour and unlawful interference with aviation in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes monitoring passenger behaviour, identifying and resolving disruptive or unlawful interference, taking action to manage unlawful interference, and reporting and documenting unlawful interference with aviation.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to aviation security duties of aviation personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

O – Security

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Monitor passenger behaviour

- 1.1** Facilities and transportation units under individual surveillance are regularly monitored to identify and/or record inappropriate behaviour
- 1.2** Potential problem situations are quickly identified and steps taken to resolve the situation in accordance with regulatory requirements
- 1.3** Incidents that breach aviation transport security requirements are identified and appropriate action taken
- 1.4** Surveillance equipment is operated within legal and workplace parameters
- 1.5** Hazards are identified, risks are assessed and hazard management implemented

2 Identify and resolve disruptive or unlawful interference

- 2.1** Nature of disruptive behaviour or unlawful interference is accurately assessed and incident resolved using appropriate resolution strategies or referred to appropriate personnel for resolution
- 2.2** Procedures are followed to isolate offender/s and to minimise disruption to other passengers
- 2.3** Assistance is sought from other staff and external support services as required
- 2.4** Follow-up action is implemented in accordance with workplace rules, regulations and guidelines

3 Take action to manage unlawful interference

- 3.1** Assistance is sought from other staff and external support services as required
- 3.2** Nature of offence and consequences of behaviour are clearly communicated to offender in accordance with workplace policies and procedures
- 3.3** Offenders are apprehended in accordance with legal and workplace parameters

4 Report and document unlawful interference

- 4.1** Unlawful interference incidents are reported using the appropriate document format in accordance with

workplace policies and procedures

- 4.2 Documentation is completed and processed in accordance with regulatory and organisational requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIO0002 Manage disruptive behaviour and unlawful interference with aviation.

Assessment Requirements for AVIO0017 Manage disruptive behaviour and unlawful interference with aviation

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- by-laws and service rules as they apply to disruptive behaviour and unlawful interference with aviation
- common law as it applies to disruptive behaviour and unlawful interference with aviation
- legal and workplace parameters with regard to unlawful interference with aviation
- disruptive behaviours, including:
 - arguments
 - hostilities
 - fare evasion
 - verbal abuse
 - physical abuse
 - graffiti
 - not complying with no smoking signs
 - not complying with aviation transport security regulations
 - drunken behaviour
- unlawful interference with aviation, including:
 - causing damage to an aircraft that is in service that puts the safety of the aircraft, or any person on board or outside the aircraft, at risk
 - committing an act at an airport, or causing any interference or damage, that puts the safe operation of the airport, or the safety of any person at the airport, at risk
 - destroying an aircraft that is in service
 - doing anything on board an aircraft that is in service that puts the safety of the aircraft, or any person on board or outside the aircraft, at risk
 - placing, or causing to be placed, on board an aircraft that is in service anything that puts the safety of the aircraft, or any person on board or outside the aircraft, at risk
 - putting the safety of an aircraft at risk by communicating false or misleading information
 - putting the safety of aircraft at risk by interfering with, damaging or destroying air navigation facilities
 - taking control of an aircraft by force, or threat of force, or any other form of intimidation or by any trick or false pretence
- procedures for managing disruptive behaviour and unlawful interference with aviation
- relevant WHS and environmental protection procedures and guidelines
- relevant state/territory regulations and requirements for managing disruptive and unlawful behaviour on transport systems
- risks and hazards when managing disruptive behaviour and unlawful interference with aviation and related actions to control the risk.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the

time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIO0018 Use firearms on an aerodrome to control wildlife hazards

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to use firearms on an aerodrome to control wildlife hazards in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes applying safety precautions in the use of firearms, and using appropriate firearms and ammunition to control wildlife hazards.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to aerodrome security duties of ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

O – Security

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Apply safety precautions in the use of firearms | <p>1.1 Locations on an aerodrome where firearms may be discharged are identified</p> <p>1.2 Hazards associated with the use of firearms on an aerodrome are identified and managed</p> <p>1.3 Firearm is carried, loaded and discharged in the correct manner</p> <p>1.4 Firearm is cleaned effectively and safely</p> <p>1.5 Firearm faults are reported in accordance with standard operating procedures (SOPs)</p> <p>1.6 Firearm is stored in accordance with regulatory requirements</p> |
| 2 Use appropriate firearms and ammunition to control wildlife hazards | <p>2.1 Appropriate wildlife hazard control measures are selected in accordance with wildlife hazard management plan and SOPs</p> <p>2.2 Cracker shells are used correctly to disperse a flock of birds in accordance with operating procedures</p> <p>2.3 Live shot is used in a safe manner to control wildlife hazards</p> |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIO2001 Use firearms on an aerodrome to control wildlife hazards.

Assessment Requirements for AVIO0018 Use firearms on an aerodrome to control wildlife hazards

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- performing wildlife control measures in a humane fashion
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- using cracker shells and live shot safe, when using firearms on an aerodrome to control wildlife hazards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- aerodrome manual guidance material

- aerodrome wildlife control zones, including:
 - airside areas
 - landside areas
- emergency procedures
- firearms, including:
 - rifles
 - shotguns
- firearm faults, including:
 - misfires
 - mechanical failure
 - misuse
- procedures for managing and controlling hazardous situations when carrying out work activities
- procedures for safely operating firearms
- procedures for servicing and minor maintenance
- relevant sections of national and state/territory regulatory requirements
- relevant WHS and environmental procedures and regulations
- requirements for completing relevant documentation
- SOPs and control methods for wildlife hazards
- steps involved in planning work activities
- wildlife hazard control equipment, including:
 - ammunition types and storage
 - storage facilities applicable to weapon types
 - applicable classes of firearms
- wildlife hazard management plan.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment

- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIO0019 Apply and monitor aviation workplace security procedures

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to apply and monitor aviation workplace security procedures in compliance with relevant regulatory requirements and national operating standards.

This includes checking and monitoring personnel and goods entering a workplace, carrying out surveillance of work areas, dealing with and writing reports on security incidents/emergencies, and completing required documentation.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to aviation security duties of aviation personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

O – Security

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Check and monitor personnel and goods entering a workplace

1.1 Entry and/or exit of personnel and vehicles are checked to prevent improper entry or unlawful removal of goods and cargo in accordance with workplace operational procedures and statutory authority regulations

1.2 Potential breaches of security that may cause goods to be at risk are observed and reported promptly to designated personnel in accordance with workplace procedures

1.3 Security measures are applied in the workplace in accordance with legislative requirements and the organisation's aviation transport security program

2 Carry out surveillance of work areas

2.1 Surveillance of work areas is undertaken in accordance with workplace procedures and regulatory requirements

2.2 Breaches of security are identified, action is initiated and/or incident is reported in accordance with workplace procedures and regulatory requirements

3 Deal with and write reports on security incidents/emergencies

3.1 Security incidents/emergencies are dealt with in accordance with regulations and site operational procedures

3.2 Appropriate police/security/emergency services are contacted as required in accordance with workplace procedures

3.3 Intended message is effectively communicated in written reports of incidents/emergencies in accordance with workplace requirements

4 Complete required documentation

4.1 Surveillance documentation and report requirements are confirmed

4.2 Surveillance documentation and reports are completed and files dispatched in accordance with workplace procedures and regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIO2015 Apply and monitor aviation workplace security procedures.

Assessment Requirements for AVIO0019 Apply and monitor aviation workplace security procedures

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- conducting surveillance, including:
 - authorisation of personnel and property to be in a secured area
 - safety and security of buildings, gates and perimeter fence
 - safety of customers, visitors and contractors
 - security of monies, premises and equipment
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant Civil Aviation Safety Authority (CASA) Manual of Standards (MOS) regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- planning own work, predicting consequences and identifying improvements
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- receiving, acknowledging and sending messages with available communications equipment
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others

- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- Australian and international codes and regulations relevant to security arrangements when transferring aviation cargo, freight and mail
- focus of operation of work systems, equipment, management and site operating systems for securely transferring cargo, freight and mail
- marking and numbering systems for aviation cargo, freight and mail
- relevant bond, quarantine or other legislative requirements
- relevant WHS and environmental protection procedures and guidelines
- security problems that may occur when transferring aviation cargo, freight and mail and appropriate action that can be taken to resolve or avoid these problems
- site layout and operating procedures
- types of hazardous aviation cargo and special handling procedures
- relevant transport and CASA security requirements with respect to person/s and vehicle/s access to the aerodrome
- workplace security procedures and policies for transferring aviation cargo, freight and mail.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIO0020 Monitor airside access and airside driving

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to monitor airside access and airside driving in compliance with relevant regulatory requirements and national operating standards.

It includes supervising airside access by persons and vehicles, dealing with breaches of airside access requirements, and maintaining safety of airside driving environment. It also includes dealing with breaches of airside driving rules/principles and providing airside escorts.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to aviation security duties of flight or ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

demonstrate achievement of the element.

- | | |
|--|--|
| 1 Supervise airside access by persons and vehicles | 1.1 Access requirements for persons and vehicles airside are identified in accordance with workplace procedures |
| | 1.2 Vehicles entering airside or on airside are checked to ensure they are appropriately authorised, marked and lit in accordance with workplace procedures and regulatory requirements |
| | 1.3 Appropriate supervision of personnel and vehicle activities is maintained throughout periods airside |
| | 1.4 Relevant personnel are notified about airside access or monitoring of airside access |
| 2 Deal with breaches of airside access requirements | 2.1 Breaches of airside access requirements are identified |
| | 2.2 Personnel breaching airside access requirements are dealt with in accordance with workplace procedures |
| | 2.3 Breaches of airside access requirements are reported to relevant authorities in accordance with workplace procedures |
| 3 Maintain safety of airside driving environment | 3.1 Checks of airside driver requirements and vehicle authorisations are carried out as required |
| | 3.2 Checks of vehicle clearances from aircraft and aircraft refuelling operations are carried out |
| | 3.3 Vehicles secured in airside environments are confirmed as compliant with parking requirements |
| | 3.4 Unattended vehicles are dealt with in accordance with workplace procedures |
| | 3.5 Hazards are identified, risks are assessed and hazard management implemented |
| | 3.6 Checks are made to ensure signs and notices are complied with |
| | 3.7 Appropriate monitoring of airside driving is maintained throughout periods when airside |
| 4 Deal with breaches of airside driving | 4.1 Breaches of airside driving rules or safe driving principles are identified |

rules/principles

- 4.2 Unsafe airside driving practices are identified and pointed out to vehicle drivers in accordance with workplace procedures
 - 4.3 Breaches of airside driving rules or safe driving principles are reported to relevant authorities according to workplace procedures
 - 4.4 Airside driving incidents are reported as required
- 5 Provide airside escorts**
- 5.1 Requests for vehicle or aircraft escort are assessed and requirements are determined
 - 5.2 Vehicle or aircraft escort is planned to minimise conflict with airside operations
 - 5.3 Drivers are briefed about escort in accordance with workplace procedures
 - 5.4 Escort is monitored to make sure it is conducted and completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for AVIO0020 Monitor airside access and airside driving

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with workplace procedures
- applying relevant legislation and workplace procedures
- applying relevant aerodrome safety management system (SMS) and procedures to assess and/or mitigate risk
- communicating effectively with others
- completing relevant documentation
- checking vehicles, including:
 - appropriate markings and lights
 - fuel and oil leakage
 - roadworthiness
- identifying and correctly using relevant equipment
- identifying workplace hazards, including:
 - aircraft movements
 - aircraft propellers and rotors
 - foreign object debris (FOD)
 - other vehicles in the vicinity of the aircraft
 - personnel in the vicinity of the aircraft
 - slippery surfaces
- implementing work health and safety (WHS) procedures and relevant regulations
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocols
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- selecting and using required personal protective equipment (PPE)
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or

damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- aerodrome layout, including access routes
- airside escort briefings, including:
 - airside movement restrictions
 - escort lights, signals and control methods
 - escort movement speed restrictions
- airside breach reporting procedures
- airside escort procedures, including:
 - aircraft
 - vehicle
- equipment needed to check vehicles, including:
 - computer
 - radio/s
 - telephone
 - vehicle with flashing light
 - vehicle with siren/loud speaker
- factors that may adversely affect the safety and/or security of an aviation workplace, including:
 - breaches of security regulations and procedures
 - changes in wind and weather conditions
 - equipment or facility breakdown, malfunction or failure
 - workplace hazards
- operation of airband radio equipment as used to communicate with air traffic control (ATC) and/or operating aircraft
- physical characteristics of aircraft, including:
 - fixed and/or rotary wing aircraft characteristics
 - pavement concession calculations
 - sizes, dimensions and weights
- problems, safety hazards and risks and related assessment/management measures that may need to be taken
- problems and irregularities that occur when supervising airside access and monitoring driving, including:
 - control and loss of keys
 - FOD
 - persons airside without appropriate identification or authorisation

- persons airside without lawful reason
- vehicles used airside without appropriate authorisation
- purpose and application of aerodrome markers, markings and temporary lighting
- relevant Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders for airside access and airside driving
 - relevant personnel to be notified about airside access or monitoring of airside access, including:
 - aerodrome tenants/users
 - air traffic control
 - airline personnel and managers
 - contractors
 - emergency services personnel
 - relevant technical staff
 - safety personnel
 - security personnel
 - other aerodrome/workplace personnel and managers
- requirements for completing relevant documentation and/or incident reporting
- safety distances required from an aircraft wingtip to objects, including other aircraft
- signs and notices, including:
 - hazard warnings
 - limited access
 - movement area guidance signs
 - no smoking
 - speed restrictions
 - unauthorised entry
 - underground electrical reticulation
- weather information and its implications for workplace operations
- workplace procedures for monitoring airside access and airside driving.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIO2013 Undertake emergency response action to a security threat

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to undertake emergency response action to a security threat, in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes selecting emergency actions to be applied, maintaining communications and reporting the incident in accordance with established procedures.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to security duties of aviation personnel, and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Use for Defence Aviation is to be in accordance with relevant Defence Orders, Instructions, Publications and Regulations.

Pre-requisite Unit

Not applicable.

Competency Field

O – Security

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Select emergency actions to be applied

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Threats or potential threats are recognised
 - 1.2 Agency/branch/base and/or police are alerted to potential aviation security threat/s and all relevant details and requests for supportive action are detailed
 - 1.3 Range of emergency actions are identified and analysed
 - 1.4 Security threat and appropriate emergency plans are matched
 - 1.5 Personal protective equipment is selected and worn in accordance with enterprise and emergency procedures
 - 1.6 Emergency actions are invoked in accordance with emergency procedures and in consideration of own safety, members of the public and the consignment
 - 1.7 Emergency actions are modified consistent with changes within the emergency environment in accordance with enterprise and emergency procedures
- 2.1 Communications are maintained with agency/branch/base and relevant agencies/personnel in accordance with enterprise and emergency procedures
- 2.2 Information is conveyed in a clear, concise and accurate manner
- 3.1 Reporting arrangements are completed in accordance with workplace policy and procedures
- 3.2 Police or other emergency services are provided with reports as required

2 Maintain communications

3 Report incident

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Threats must include one or more of the following:
- aviation transport security threats
 - dust and vapours
 - firearm handling
 - hazardous or dangerous materials
 - humidity, air temperature
 - persons with felonious intent
 - unlawful interference with aviation
 - vehicular, pedestrian and aircraft traffic
- Personal protective equipment must include one or more of the following:
- gloves
 - safety headwear and footwear
 - firearms
 - two-way radios
- Communication must include one or more of the following:
- mobile and fixed phones
 - radio
 - oral, aural or signed communications
- Incidents must include:
- actual or potential breaches of aviation security arrangements

Unit Mapping Information

This unit replaces and is equivalent to AVIO2013A Undertake emergency response action to a security threat.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIO2013 Undertake emergency response action to a security threat

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment in accordance with standard operating procedures
- applying precautions and required action to minimise, control or eliminate identified security threats
- applying relevant agreements, codes of practice, legislative requirements and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS)/occupational health and safety (OHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- planning own work, predicting consequences and identifying improvements
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly, in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment conforming to industry and WHS/OHS standards
- using correct manual handling techniques
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- contingency planning relating to managing and controlling aviation security threats
- housekeeping standards and procedures
- operational procedures for identifying aviation security threats and undertaking emergency response
- relevant state/territory permit and licence regulations and requirements
- relevant WHS/OHS procedures and guidelines
- requirements for approved work procedures and relevant equipment
- risks, hazards and precautions to control security threats
- typical problems that can occur when undertaking emergency response action to an aviation security threat and appropriate action that can be taken to prevent or solve these problems.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

AVIO4003 Implement airside access

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to implement airside access, in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes implementing airside access procedures and reporting on airside access.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) related to aviation security duties of aviation personnel, and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Use for Defence Aviation is to be in accordance with relevant Defence Orders, Instructions, Publications and Regulations.

Pre-requisite Unit

Not applicable.

Competency Field

O – Security

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Implement airside access procedures

2 Report on airside access

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Eligibility for access is determined in accordance with standard operating procedures
- 1.2 Access is permitted or denied
- 1.3 Vehicle or airside escorts are provided as required
- 1.4 Problems and irregularities that may occur when implementing airside access procedures are dealt with in accordance with workplace procedures
- 1.5 Appropriate records are maintained
- 2.1 Reported access breaches are addressed in accordance with standard operating procedures
- 2.2 Recommendations and reports on access incidents are made to aerodrome management in accordance with standard operating procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Problems and irregularities that may occur must include:

- control and loss of keys
- supply of materials

Unit Mapping Information

This unit replaces and is equivalent to AVIO4003A Implement airside access.

Assessment Requirements for AVIO4003 Implement airside access

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of elements, performance criteria and range of conditions on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- implementing contingency plans
- implementing work health and safety (WHS)/occupational health and safety (OHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly, in accordance with workplace procedures
- working collaboratively with others.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- emergency procedures
- equipment required for airside access:
 - access locks and keys
 - computer
 - identity card/s
 - vehicle

- procedures for reporting airside access breaches
- procedures for implementing airside and landside access
- procedures for operating electronic communications equipment
- relevant documents:
 - aerodrome manual
 - aviation security identification card (ASIC) program
 - legislation
 - passes and permits
 - transport security program
- relevant sections of national and state/territory regulatory requirements and codes of practice
- relevant WHS/OHS and environmental procedures and regulations
- requirements for completing relevant documentation
- standard operating procedures relating to implementing airside access procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

AVIP2001 Capture records into a records keeping system

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to capture records into a records keeping system, in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes identifying records to be captured, and registering a record. The record capturing process is conducted as part of records management activities with the operator using discretion and judgement within established procedures.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to administration and finance duties of flight or ground operations personnel, and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Legislative and regulatory requirements apply to this unit.

Use for Defence Aviation is to be in accordance with relevant Defence Orders, Instructions, Publications and Regulations.

Pre-requisite Unit

Not applicable.

Competency Field

P – Administration and Finance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Identify records to be captured

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Material identified and classified for registration is sorted in accordance with records keeping system procedures
 - 1.2 Activity documented by a record is identified from elements of the record in accordance with organisational procedures
 - 1.3 Area or action officer to whom the record needs to go is identified from elements of the record and staff list, in accordance with organisational procedures
 - 1.4 Material that cannot be readily identified is referred to appropriate authority in accordance with organisational procedures
-
- 2.1 Unique identifier is selected for record in accordance with organisational procedures and records keeping system rules
 - 2.2 Record is registered into records keeping system with title, description, details of record creator, immediate location and any other control information to fulfil the system requirements, in accordance with organisational procedures
 - 2.3 Access and security status are recorded in accordance with organisational procedures and records keeping system rules
 - 2.4 Disposal status of record is recorded in accordance with records keeping system rules and organisational procedures
 - 2.5 Record is forwarded to its appropriate location, which is recorded, in accordance with system rules and organisational procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Records must include:
- action that is either complete or includes sentencing that may be part of the capture process
 - media that is paper-based, electronic or other format
 - number of simple series, form-based records (e.g. financial or personnel transactions with limited range of activities in the records)
 - simple records series (single disposal class in disposal authority)

Unit Mapping Information

This unit replaces and is equivalent to AVIP2001A Capture records into a records keeping system.

Links

Assessment Requirements for AVIP2001 Capture records into a records keeping system

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment in accordance with standard operating procedures
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing work health and safety (WHS)/occupational health and safety (OHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- maintaining security and confidentiality of material
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly, in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment conforming to industry and WHS/OHS standards
- using a range of information technology devices including computers, radio frequency devices, electronic data exchange systems
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- focus of operation of work systems, equipment, management and site operating systems for capturing records into a records management system
- housekeeping standards and procedures
- operational workflow within a records management system
- problems that may occur when capturing records and appropriate action that can be taken to resolve these problems
- regulations relevant to capturing records as part of a records management process
- relevant WHS/OHS and environmental protection procedures and guidelines
- site layout and obstacles
- types of equipment used in capturing records into a records management system and the precautions and procedures that should be followed in their use
- workplace procedures and policies for capturing records into a records management system including policies on confidentiality and security of information and records.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

AVIR0001 Service customer airline contracts

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to service customer airline contracts in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes interpreting customer airline contract requirements, coordinating the provision of contracted airline services, handling problems and issues, and completing all required documentation.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) of aviation personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit at time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

R – Contract and Procurement

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Interpret customer airline contract requirements

1.1 Details of customer airline contract services and provisions are obtained and accurately interpreted

1.2 Appropriate action is taken to prepare for and organise the provision of contracted services to a customer airline

1.3 Team work is used to maximise efficiency and effectiveness

2 Coordinate the provision of customer airline contract services

2.1 Provision of customer airline contract services is coordinated in accordance with contract specifications and standards, precision timing schedules, regulatory requirements and workplace procedures

2.2 Appropriate liaison is maintained with customer airline representatives concerning pertinent issues of service delivery in accordance with workplace procedures and contract arrangements

2.3 Safe use of required equipment and materials is monitored in accordance with regulatory requirements and workplace procedures

2.4 Appropriate action is taken to ensure correct manual handling techniques used are in accordance with work health and safety (WHS)/occupational health and safety (OHS) requirements

2.5 Compliance with safety and security requirements is implemented and monitored throughout service period

2.6 Hazards are identified and appropriate risk management actions are implemented in accordance with workplace procedures

2.7 Identified problems and irregularities in service delivery are resolved in consultation with customer airline representatives in accordance with workplace procedures and contract arrangements

2.8 Available opportunities are identified to enhance service delivery and appropriate action is taken to suggest and/or implement identified opportunities in accordance with workplace procedures

- | | | | |
|----------|-----------------------------------|------------|---|
| 3 | Handle problems and issues | 3.1 | Problems and issues with customer airline contracts are identified and processed or reported in accordance with customer airline contract provisions |
| | | 3.2 | Identified problems and irregularities in service delivery are resolved in consultation with customer airline representatives in accordance with workplace procedures and contract arrangements |
| 4 | Complete documentation | 4.1 | Documentation requirements for servicing customer airline contracts are confirmed |
| | | 4.2 | Documentation for servicing customer airline contracts is completed and processed in accordance with workplace procedures, contract specifications and relevant regulatory requirements |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIR3001 Service customer airline contracts.

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIR0001 Service customer airline contracts

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- identifying and correctly using relevant equipment
- implementing and following work health and safety (WHS) procedures and relevant regulations
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following instructions, regulations, procedures, information and signs
- reporting and/or rectifying identified problems promptly in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- customer airline terminal layout, and operations area and facilities
- customer contract specifications, standards and instructions
- different airline types and the variations in their requirements
- people to consult about servicing customer airline contracts, including:
 - members of contract support teams
 - representatives of customer airline contracting the services
 - supervisors, team leaders and managers
 - technical staff
- problems and issues that may occur when servicing customer airline contracts, and appropriate action that should be taken in each case, including:
 - aircraft configurations
 - aircraft mechanisms
 - security issues
 - supply of materiel
 - weather phenomena and severe weather events
- relevant operating and safety procedures for safely handling and using equipment/materials
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders for airline service provisions
- relevant WHS and environmental procedures and regulations, including manual handling procedures
- risks that exist when servicing customer airline contracts, and related risk control procedures and precautions
- safety and security requirements of the customer airline
- workplace procedures and standards for contracted services involved.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation, including workplace procedures, regulations, codes of practice and

operation manuals

- acceptable means of simulation assessment

AVIW0001 Operate and manage advanced remote pilot aircraft systems

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to operate and manage advanced unmanned aircraft systems (RPAS) beyond visual line of sight (BVLOS) in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes operating and managing aircraft systems during normal flight and managing aircraft systems during abnormal and emergency procedures.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to equipment and system operations of flight or ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

W – Equipment and Systems Operations

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Operate and manage advanced aircraft systems during normal flight

- 1.1** Aircraft systems, sub-systems (equipment) and devices are operated and managed
- 1.2** Aircraft systems, sub-systems (equipment) and devices are monitored using a systematic scan technique
- 1.3** Aircraft systems and flight environment information is analysed to identify actual and potential threats or errors
- 1.4** Automated aircraft systems are utilised to manage workload
- 1.5** Hazards are identified, risks are assessed and hazard management implemented
- 1.6** Checklist procedures are completed as appropriate to aircraft system

2 Manage advanced aircraft systems during abnormal and emergency procedures

- 2.1** Non-normal or emergency situations are recognised
- 2.2** Control of aircraft flight path is maintained during abnormal and emergency response procedures
- 2.3** Affected aircraft system or sub-system is identified and confirmed
- 2.4** Checklist procedures are implemented during abnormal and emergency situations using appropriate techniques
- 2.5** Appropriate non-normal or emergency procedures are performed in accordance with relevant workplace and emergency procedures, and regulatory requirements
- 2.6** Course of action is decided, implemented, evaluated and revised to achieve safest outcomes
- 2.7** Location and operation of emergency systems applicable to aircraft type are identified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AVIW0001 Operate and manage advanced remote pilot aircraft systems

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant aeronautical and aircraft systems knowledge
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting aircraft system displays
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- operating manual and automated aircraft systems
- performing systematic scan technique for monitoring aircraft systems, sub-systems (equipment) and devices
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly in accordance with workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- undertaking fault finding in aircraft systems
- using automated systems to manage workload
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aircraft systems as applicable to aircraft rating/endorsement requirements
- aircraft system checklists, including:
 - explanation of normal system operating procedures of aircraft systems, sub-systems and devices used to operate specific aircraft type, including use of published scans and checklists, immediate action items, warnings and limitations
- automated systems, including:
 - limitations of automated systems
 - operating procedures for systems, such as flight management system, auto throttle/engine control, flight director system, automated aircraft navigation systems, automated engine condition and monitoring system
 - workload management procedures for utilising automated systems
 - warning systems/indicators to identify automated systems failure
- autopilot, including:
 - principles of operation of autopilot system
 - likely faults that may affect autopilot system
 - emergency operating procedures for autopilot system
 - identification of power sources, voltage or pressure
 - procedure to determine gyros are operating normally
 - procedure to engage autopilot
 - normal and emergency procedure to disengage autopilot
 - limits of gyro units
- electrical system, including:
 - use of a schematic diagram of the electrical system to explain type/s of electrical system (alternating current (AC)/direct current (DC))
 - likely faults that may affect electrical system
 - emergency operating procedures for electrical system
 - voltage and amperage of battery
 - number and output of generators
 - methods of circuit protection
 - location of fuses and circuit breakers
 - precautions to be taken when operating electrical service
 - instruments operated by electrics
- enhanced ground proximity warning system (EGPWS)/terrain awareness and warning system (TAWS), including:
 - identification and demonstration or explanation of function of all cockpit EGPWS/TAWS controls

- information terrain awareness display shows
- warnings given by fitted EGPWS/TAWS, including what each warning indicates is happening to aircraft in flight
- fuel system, including:
 - use of a schematic diagram of fuel system to explain layout and normal operating procedures
 - likely faults that may affect fuel system
 - emergency operating procedures for fuel system
 - operation of fuel selector panel
 - use of cross-feed
 - full fuel capacity and fuel grade
 - normal, minimum and maximum fuel pressures
- traffic and collision avoidance systems (TCAS), including:
 - surveillance and collision avoidance functions of TCAS II
 - system limitations, selectivity and inhibits
 - basic components of TCAS II
 - identification and demonstration or explanation of function of cockpit controls
 - TCAS II visual displays and symbology
 - functions of audio alerts and annunciations
 - appropriate crew response to multiple TCAS II events, and parallel runway approach conflicts
 - recall of radiotelephone procedures following a TCAS II alert
 - requirements for a written report of a TCAS II alert and to whom it must be submitted.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations for advanced operation
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

- relevant materials, tools, equipment and PPE currently used in industry.

AVIW0002 Manage multi-crew operation in beyond visual line of sight (BVLOS) operations

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to operate and manage remote pilot aircraft systems (RPAS) in a multi-crew operation in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes operating and managing RPAS during normal flight and managing RPAS during abnormal and emergency procedures.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to equipment and system operations of flight or ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew RPAS environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

W – Equipment and Systems Operations

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Establish remote pilot aircraft command	1.1 Command responsibilities are exercised in accordance with organisational authority and guidelines 1.2 Command structure is established appropriate to aircraft 1.3 Command structure is communicated to flight team and external authorities 1.4 Communication mechanisms and procedures are implemented between levels of command in accordance with organisational procedures 1.5 Liaison is established and maintained between remote pilot in command (RPIC), flight team and other relevant stakeholders to meet control and command requirements
2 Manage tasks and workload	2.1 Workload of flight team members is planned taking into account time and resource constraints 2.2 Flight team is assigned workload priorities and performance expectations are communicated clearly 2.3 Workload of flight team is coordinated in accordance with agreed operational objectives and task timelines 2.4 Performance of flight team and individuals is systematically monitored against defined measurable performance criteria to ensure satisfactory completion of assigned tasks and workloads 2.5 Potential and current issues and problems arising in relation to task and workload management are identified and acted on in accordance with regulatory and organisational requirements
3 Communicate organisational objectives and required standards	3.1 Flight team members are provided with up-to-date information concerning organisational objectives and standards 3.2 Flight team member understanding of objectives and standards is confirmed 3.3 Organisational standards and values are modelled and promoted to flight team members
4 Make effective decisions	4.1 Relevant, current and sufficient information is gathered

- to assess and analyse situation for decision making
- 4.2 Problem-solving strategies and techniques are used to identify and generate options
 - 4.3 Decisions are made, communicated to flight team and implemented in a timely manner in accordance with regulatory requirements and workplace procedures
 - 4.4 Decisions and actions are evaluated for their effectiveness and outcomes
 - 4.5 Decisions, their rationale and associated actions are documented and reported in accordance with regulatory requirements and workplace procedures
- 5 Lead flight teams and individuals**
- 5.1 Link between function of flight team and organisational goals is clarified as required and is communicated to flight team
 - 5.2 Participative decision making is used to develop, implement and review work of flight team and to allocate responsibilities
 - 5.3 Opportunities are given to flight team members and individuals to provide feedback about efficient work practices and processes
 - 5.4 Flight team members and individuals are encouraged to provide feedback about efficient work practices
 - 5.5 Appropriate delegation is made to flight team and individuals in accordance with relevant flight team objectives and goals, and organisational policy and procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

No equivalent unit

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIW0002 Manage multi-crew operation in beyond visual line of sight (BVLOS) operations

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- allocating sufficient resources and time to complete workload
- applying relevant aeronautical knowledge
- breaking down tasks and establishing courses of action to accomplish specified goals
- collecting information and identifying key issues and relationships relative to achieving determined roles
- conducting briefings to share common plan and to set priorities
- correcting flight team member deviations from standards
- encouraging monitoring of performance by other flight team members
- ensuring flight team members are aware of their role and responsibilities throughout a flight
- ensuring responsibility for flight path management is always assigned
- establishing an atmosphere to encourage open communications
- identifying and managing threats and errors
- identifying and managing undesired aircraft states
- identifying when flight team members become ineffective or incapacitated
- implementing work health and safety (WHS) procedures and relevant regulations
- maintaining flight team member motivation and commitment to task
- maintaining patience and focus when processing large amounts of data or multiple tasks
- managing flight deck gradient relative to task
- managing time and resources to ensure work is completed safely and effectively
- monitoring outcomes and evaluating own performance
- monitoring effectiveness of flight team performance
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- setting realistic performance standards
- taking action to resolve flight team member confusion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aircraft instrument requirements
- aircraft load limitations
- aircraft performance and landing calculations
- aircraft speed limitations
- aircraft systems
- applicability of drug and alcohol regulations
- classification of operations
- RPAS flight team management, including:
 - flight team coordination:
 - distribution of responsibilities
 - working with a flight team concept
 - flight team cooperation:
 - small group dynamics (norms, atmosphere, pressure, communication and structure)
 - conflict management
 - leadership style of management:
 - concern for performance
 - concern for people
 - democratic versus autocratic style
 - encouraging inputs and feedback
 - optimising flight team performance in flight
 - correcting flight team coordination deficiencies
 - communication, including:
 - verbal and non-verbal communication
 - one and two-way communication
 - effects of different communication styles
 - miscommunication (including cultural misunderstandings)
- effective decision-making processes, including:
 - identifying problems and causal factors
 - assessing component parts systematically and logically
 - employing analytical techniques to identify solutions and to consider the value and implications of each
 - generating solutions and/or alternative courses of action
 - assessing alternative solutions and risks with other flight team members
 - determining course of action
 - communicating decision and delegate tasks to flight team
 - monitoring progress against agreed plan

- evaluating decisions in line with changing circumstances
- ensuring decision making is improvement-focused and directed towards achieving optimum outcomes
- emergency equipment requirements
- flight and duty time limits
- flight rules (specific to aircraft), including:
 - documentation
 - aircraft nationality and registration
 - airworthiness of aircraft
 - personnel licensing
 - rules of the air
 - procedures for air navigation
 - air traffic services
 - aeronautical information service
 - aerodromes
 - facilitation
 - search and rescue (SAR)
 - security
 - aircraft accidents and incidents – pilot in command (PIC) responsibilities
 - air service operations
- fuel/power planning requirements for the flight
- judgement and decision making, including:
 - pilot judgement concepts:
 - types of judgement
 - motor skills and human factors
 - aeronautical decision making:
 - decision-making concepts
 - pilot responsibilities
 - behavioural aspects
 - identification of hazardous attitudes:
 - physical factors
 - psychological factors
 - social influences and interface between people
 - pilot judgement awareness:
 - risk assessment
 - cockpit stress management
 - applying decision-making concepts:
 - practical application
 - managing resources
 - safety awareness

- maintenance authorisations
- privileges and limitations of the multi-crew
- requirements for an Air Operator Certificate (AOC)
- requirements for aerodromes, including:
 - type of information contained in an operation manual.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIW0003 Undertake helicopter aquatic rescue and recovery

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to undertake helicopter aquatic rescue and recovery in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA), the Australian Maritime Safety Authority (AMSA) and national operating standards.

It includes preparing and responding to aquatic rescue incidents from a helicopter, assessing the rescue scene, in offshore or inland waterways and developing rescue plans. It also includes gaining access to and performing a rescue on a patient, recovering the patient, and concluding the rescue.

This unit addresses technical skill requirements (physical, mental and task-management abilities) related to equipment and system operations of flight or maritime operations personnel and contributes to safe and effective performance in complex operational offshore rescue environments.

Operations are conducted as part of commercial and military aircraft or marine activities across a variety of operational contexts within Australian industry.

Work is performed independently or under limited supervision within a multi-crew environment. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

W – Equipment and Systems Operations

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare and respond to rescue

- 1.1** Operation and task information is obtained from communications centre, briefing from supervisor or other sources
- 1.2** Rescue equipment and/or resources are identified and selected based on task information received
- 1.3** Personal protective equipment (PPE) and clothing is selected based on the nature of the rescue operation
- 1.4** Any further details on the nature of the rescue received en route is discussed with rescue team members
- 1.5** Anticipated situational and environmental hazards are discussed with rescue team members while en route and are for the development of a rescue plan

2 Assess rescue scene

- 2.1** Observations are made to determine the location, number, condition and position of patients
- 2.2** Risk assessment on situational and environmental hazards is conducted and control measures applied to ensure safety of self and others are developed
- 2.3** Requests for additional personnel and/or specialist equipment based on risk assessment is communicated via the communications centre in accordance with organisational procedures
- 2.4** Personal capabilities and limitations of self and other team members are considered in the development of the rescue plan

3 Develop aquatic rescue plans

- 3.1** Rescue and recovery techniques suitable to the patient condition, location and offshore environment are identified
- 3.2** Primary and alternate rescue plans are developed based on situational risk assessment, identification of appropriate rescue and recovery techniques and consultation with other rescue team members

- 3.3** Appropriate equipment and resources are selected to perform offshore rescue and recovery as identified by the rescue plan
 - 3.4** Alternate rescue plans are implemented when required
- 4 Gain access and perform offshore rescue of patient**
 - 4.1** Communication with team members is maintained during rescue
 - 4.2** Positioning of the patient to assist in extrication and management of a conscious patient
 - 4.3** Offshore rescue asset is appropriately positioned to perform a rescue or recovery where required by the rescue plan
 - 4.4** Offshore rescue techniques and equipment are deployed to gain access to patient as identified in the rescue plan
- 5 Recover patient**
 - 5.1** Offshore rescue plan is implemented, where the patient is extricated and secured by using appropriate rescue and recovery techniques and equipment
 - 5.2** Patient is recovered using techniques in accordance with organisational policies and procedures
 - 5.3** Patient is secured in accordance with organisational emergency care procedures or as directed by first aid or medical personnel
- 6 Conclude offshore rescue**
 - 6.1** Equipment is recovered, cleaned and maintained in accordance with manufacturer guidelines and organisational procedures
 - 6.2** Offshore rescue equipment and PPE is inspected and refurbished at conclusion of incident
 - 6.3** Operational debrief is participated in or conducted in accordance with own role during the offshore rescue
 - 6.4** Post-incident documentation is completed to organisational standards and in accordance with own role requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

No equivalent unit.

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIW0003 Undertake helicopter aquatic rescue and recovery

Modification History

Release 1. This is the first release of this unit of competency in the PUA Public Safety Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and range of conditions on at least one occasion and includes:

- anticipating, identifying and mitigating offshore rescue hazards and risks
- applying aggressive, manoeuvring and defensive swimming techniques to escape hazards
- applying aquatic rescue techniques
- applying first aid in an aquatic rescue environment
- determining appropriate rescue and recovery methods to use according to the incident
- handling and packaging patient
- identifying changes in patient condition and position
- identifying changes in the aquatic environment, including:
 - swell conditions
 - rips and currents
 - eddies
 - other hydrological features
- informing relevant personnel of incident progress
- interacting with other members of the rescue team, patient and others
- managing spinal injuries in the context of an offshore rescue incident
- selecting aquatic rescue equipment and resources appropriate to incident type
- patient working as part of a team and supporting others in an aquatic rescue operation.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of:

- behaviour of patients in aquatic environments
- composition of offshore rescue teams, and roles and responsibilities of rescue team members
- first aid hazards and risks associated with offshore rescues and recoveries, including:
 - circum-rescue collapse
 - hypothermia

- offshore environmental considerations, including:
 - swell conditions
 - rips and currents
 - eddies
 - other offshore hydrological features
- aquatic rescue and recovery equipment characteristics, including:
 - advantages and disadvantages for deployment
 - care and maintenance to enable appropriate selection and use
- organisational communication techniques used during aquatic rescue operations
- potential contaminants in water and their potential impact on the rescuer and patient
- principles of risk assessment, including hierarchy of control and control methods
- psychological considerations of offshore rescue for the rescuer, patient (normal survivor behaviour, panic, counter-panic patient, instinctive drowning response), and the potential need for support resources
- signs and symptoms of operational stress in self and others and reporting to appropriate support personnel
- relevant legislation, and organisational policies and procedures to enable safe conduct of aquatic rescue and recovery activities.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in organisationally approved simulated operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- acceptable means of simulated assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIW0004 Perform operational inspections on remote operated systems

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to perform operational inspections on remote operated systems in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes completing operational inspection administration, operational inspections, and performing and recording operational inspections.

This unit addresses technical skill requirements (physical, mental and task-management abilities) related to equipment and system operations of remote system operations personnel and contributes to safe and effective performance in complex operational environments.

Remote system operations are conducted as part of recreational, commercial and military activities across a variety of operational contexts within Australian industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew remote operated system environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

W – Equipment and Systems Operations

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare charts and operational plan	1.1 Suitable maps, charts and weather briefings for intended remote operation are selected and operations plan and geofencing set if required is prepared
	1.2 Pre-operational information and Notice to Airmen (NOTAM), or industry equivalent, is accessed, analysed and applied to operational plan
	1.3 Hazards are clearly indicated on charts and risk controls are implemented
	1.4 Effects of wind velocity, adverse environmental conditions and contingency actions are planned for
	1.5 Lost link profile and routing is prepared and validated
	1.6 Awareness of current and forecast weather conditions is maintained
2 Complete operational inspection administration	2.1 Information about remote operated system is obtained, read and used to guide work as required
	2.2 Pre- and post-operational planning and documentation is completed
	2.3 Remote system operating weight and configuration is confirmed
	2.4 Pre- and post-operation technical release and remote system operation administration documentation is completed
	2.5 System serviceability is determined by approved technical inspection
	2.6 Certification of inspection for technical release is completed
3 Perform operational actions/ inspection	3.1 Equipment and documentation are identified and accessible in accordance with regulatory requirements
	3.2 Internal and external checks are completed in accordance with approved system checklist
	3.3 Deployment administration tasks and communications

- are conducted
- 3.4** Remote operated system is secured in accordance with manufacturer specifications and organisational procedures
- 4 Perform and record operational inspection**
- 4.1** Pre-operating inspection of remote operated system and ancillary equipment is performed in accordance with original equipment manufacturer (OEM) documentation and operations manual
- 4.2** Appropriate actions are undertaken to rectify discrepancies and are recorded
- 4.3** Pre-operating inspection is recorded in accordance with operations manual

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is not equivalent to AVIW3037 - Manage remote pilot aircraft systems pre- and post-flight actions

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIW0004 Perform operational inspections on remote operated systems

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- accessing and applying relevant regulations, orders and information to the performance of the required planning and operational inspection administrative functions
- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying industry safety practices and regulations
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- applying relevant remote operated system knowledge to industry application
- communicating effectively with others
- completing relevant documentation
- complying with operational task authorisations
- identifying and correctly using equipment required when performing inspections
- implementing technical contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipate operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- performing input and downloading of data from flight planning systems
- planning pre-operational plan, including:
 - availability of consumables enroute and at destination
 - consumables required for flight
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- understanding and meeting the obligations placed on a remote system operator with regard to

operational inspections

- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- decision-making processes relevant to remote system operations
- system technical release requirements and procedures for intended operations
- checklist use and procedures
- effective communication
- error management, including error types, causes and consequences
- fatigue management
- flight-specific reports, including incident reporting
- human factors applicable to remote system operations
- human performance and its limitations, including the senses, memory and situational awareness
- inspection procedures, including rectification actions
- minimum equipment list for applicable remote operated system
- information, including one or more of the following:
 - aeronautical charts
 - aircraft flight manual (AFM)
 - approved checklists
 - conditions of service, legislation and industrial agreements, including workplace agreements and awards
 - En Route Supplement Australia (ERSA)
 - flight and technical log
 - induction and training materials
 - maintenance release
 - meteorological forecasts
 - Notice to Airmen (NOTAM)
 - operations manuals
 - workplace procedures and instructions, and job specification
- pre- and post-operation planning administration procedures, including operational task authorisations
- production methods for operational plans, including:
 - automated operational planning systems
 - manual planning methods

- relevant Australian Standards
- relevant legislation, regulations and orders applicable to industrial sector
- relevant WHS and environmental procedures and regulations
- risk identification, analysis and control
- stress, workload and time pressure management.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIW0005 Determine meteorological factors for remote pilot aircraft operations

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to determine meteorological factors for remote pilot aircraft systems (RPAS) beyond visual line of sight (BVLOS) in compliance with the relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards

It includes determining aircraft meets requirements for BVLOS flight, obtaining and using current operational documents, preparing aircraft systems and monitoring during operations. It also includes determining operational requirements and programming navigation systems.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to route planning and navigation duties of flight crew and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

H – Route Planning and Navigation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Obtain and use current operational meteorological documents

1.1 Operational meteorological documents applicable to flight are obtained and checked for currency

1.2 Applicable information contained in documents for flight planning and management is interpreted and applied

2 Determine aircraft meets requirements for BVLOS operations

2.1 Aircraft requirements for BVLOS operations are determined and meet identified conditions

2.2 Flight and navigation instruments, minimum electrical lighting, navigation equipment and any other requirements fitted to aircraft are checked to ensure they are suitable and acceptable for BVLOS operations

2.3 Duration of flight is determined

2.4 Total fuel/power requirements are calculated to ensure sufficient flight duration for the task

3 Monitor operations

3.1 Operationally useful weather observations are gathered accurately

3.2 Issues with weather observations are identified and reported accurately to relevant personnel

3.3 Meteorological environment is monitored during operations

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work

environment.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AVIW0005 Determine meteorological factors for remote pilot aircraft operations

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying altimetry procedures to all stages of an instrument flight
- applying published instrument flight rules (IFR) procedures
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant aeronautical knowledge
- applying relevant legislation and workplace procedures
- calculating fuel/power requirements
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting instrument meteorological conditions (IMC) forecasts
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- selecting suitable navigation aids/systems
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aerodrome and en route holding procedures
- aircraft fuel planning, including holding, alternate, fixed reserve and usage rates
- aircraft transponder operation
- airspace requirements and procedures under BVLOS conditions
- Civil Aviation Safety Regulation (CASR) Part 101 Manual of Standards (MOS) Aeronautical Knowledge relevant to BVLOS flight operations
- continuous descent final approach (CDFA) techniques
- critical point (CP) and point of no return (PNR)
- how to determine currency of operational documents
- factors affecting en route performance, range and endurance
- general operational information relevant to BVLOS remote pilots, including:
 - privileges and limitations
 - documentation
 - procedures, radio telephony and charts
 - meteorology
 - operational planning requirements
- ground and space navigation systems and infrastructure, including:
 - principles of operation, indications and limitations of ground-based navigation aids
 - altitude and time of day
 - pilot navigation tolerances
 - global navigation satellite system (GNSS), including:
 - operating procedure errors
 - mode selection
 - data entry
 - data validation and checking, including independent cross-checking procedures
 - automation induced complacency
 - non-standardisation of GNSS receiver units
 - human information processing
 - situational awareness
- human factors relevant to BVLOS remote pilots, including physiological factors
- icing conditions and hazards
- IFR cruising levels, selection and hazards
- BVLOS route planning requirements
- instrument flight documentation requirements
- BVLOS flight procedures, including:
 - flight instrument operations, errors and limitations
 - radio communication phraseology

- lost communications procedures
- air traffic service requirements
- instrument chart symbology and information
- reporting requirements
- 2D/3D instrument approach operations
- pilot responsibilities
- altimeter accuracy and variations due temperature
- flight plan validity
- pilot obligations
- missed approach requirements
- alternate aerodrome weather minima
- aircraft separation standards
- lowest safe altitude (LSALT), including:
 - calculate route LSALT not specified in aeronautical information publications (AIP)
 - missed approach minimum obstacle clearance
 - minimum obstacle clearance provided by minimum circling altitude
 - track establishment after launch
 - establish aircraft above LSALT requirements
 - descent below LSALT or minimum safety altitude requirements by day/night/night visual flight rules (NVFR)
- meteorological considerations for an BVLOS flight, including:
 - weather phenomena:
 - frontal weather
 - tropical cyclones
 - dust devils
 - thunderstorms
 - jet streams
 - fog
 - meteorological information requirements
 - interpreting forecasts to determine operational requirements
 - air temperature lapse rates
 - predicting probability of meteorological conditions:
 - airframe icing
 - hail
 - micro-bursts and wind shear
 - turbulence, including clear air turbulence (CAT)
 - weather information services
 - pilot reporting obligations
 - altimeter query nautical height (QNH) sources required for BVLOS operations
 - meteorological minimas

- navigation requirements, including:
 - position fixing requirements
 - aircraft performance categories and operational implications
 - waypoints, symbology and pilot requirements:
 - initial approach fix
 - final approach fix
 - visual circling by day or night
 - pressure error correction (PEC)
 - aerodrome operating minima (AOM)
 - decision altitude (DA)
 - normal segment gradient
 - tracking tolerances:
 - controlled area (CTA) avoidance
 - ground-based navigation aids
 - navigation aids not available
 - notification requirements
 - order of precision of navigation aids/systems
 - speed limitations and restrictions:
 - operations below 10,000 feet above mean sea level (AMSL)
 - during holding procedures
 - during approach procedures
 - issued by air traffic services and when cancelled
- NVFR operational requirements
- operational planning requirements, including:
 - flight planning:
 - route limitations
 - aircraft performance
 - forecast freezing levels
 - cruising altitude/level performance tables
 - alternate aerodrome requirements:
 - weather
 - navigation aids
 - approach procedures
 - lighting
 - availability of weather reports
 - divert time
 - holding fuel requirements
 - GNSS receiver requirements for BVLOS APCH operations
 - GNSS receiver mode conditions and actions for BVLOS APCH
 - augmented and non-augmented approaches

- IAP charts for minima information and operational restrictions
- space-based augmentation systems (SBAS)
- APV Baro-VNAV instrument approach charts
- vertical guidance information and operational considerations
- Baro-VNAV vertical guidance principles
- pilot responsibilities, including:
 - standard instrument departure (SID)
 - standard terminal arrival route (STAR)
 - noise abatement
 - missed approach
 - holding pattern and entry
- planned/alternate destination weather conditions below minima
- privileges and limitations conferred by an instrument rating
- receiver autonomous integrity monitoring (RAIM) prediction implications
- reduced vertical separation minima (RVSM) operations, including:
 - range of flight levels within Australian airspace
 - operational requirements
 - aircraft altimeter accuracy requirements
 - vertical height tolerances
 - procedures and standard communication phraseology
 - altimetry system failures
- relevant WHS and environmental procedures and regulations
- relevant sections of Civil Aviation Safety Regulations (CASRs) for BVLOS planning requirements
- requirements for an alternate aerodrome
- use of a navigational computer.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIW0006 Perform infrastructure inspections using remote operated systems

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to operate and manage remote pilot aircraft systems (RPAS) when inspecting infrastructure in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

Infrastructure includes but is not limited to electricity pylons, gas pipelines, cables, roads and rail infrastructure.

It includes operating and managing RPAS during normal flight, and managing RPAS during abnormal and emergency procedures.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to equipment and system operations of flight or ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew RPAS environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

W – Equipment and Systems Operations

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Conduct pre-flight actions

- 1.1** Own fitness for flight and planned operations is self-assessed
- 1.2** Operational aircraft type is determined for suitability for type of aerial infrastructure inspection operation
- 1.3** Aircraft and role equipment are checked and assessed for serviceability prior to commencing flight operations
- 1.4** Required applicable maintenance documentation is compiled and checked for accuracy and completeness
- 1.5** Role equipment calibration is checked and adjusted as required
- 1.6** Planned aerial infrastructure inspection operations are assessed for potential or actual hazards
- 1.7** Fuel/power requirements are determined and established within aerial operational plans
- 1.8** Issues relating to aircraft weight, performance, dimensions, load and meteorological conditions are identified and managed

2 Conduct planning and risk management

- 2.1** Suitability of current and forecast weather is determined
- 2.2** Infrastructure inspection plan is developed and used as the basis for aerial application operations
- 2.3** Potential and actual hazards and operational requirements are identified, risks to aerial infrastructure inspection operations are assessed and appropriate risk controls implemented in accordance with the application management plan
- 2.4** Area map is correctly interpreted
- 2.5** Acceptable aircraft performance for aerial infrastructure inspection operational conditions is confirmed through performance planning

- 2.6** Normal and abnormal operational communications and signals are confirmed
- 3 Conduct aerial mapping and modelling**
- 3.1** Appropriate aerial survey plans are developed for conducting safe aerial mapping and modelling operations
- 3.2** Operating area boundaries are established and environmentally sensitive areas identified, including areas that are noise sensitive, biologically susceptible, populated and urban, and restricted or dangerous
- 3.3** Potential emergency or alternate landing areas are identified and/or established for contingency operations
- 3.4** Environmental hazard factors affecting aerial mapping and modelling operations are considered
- 3.5** Wind velocity and direction are assessed for effect on operations
- 3.6** Infrastructure inspection operations is conducted safely in accordance with the application management plan
- 3.7** Infrastructure inspection equipment is operated within scope of the plan
- 3.8** Decisions to suspend or continue safe aerial infrastructure inspection are taken based on planned or actual operating conditions
- 3.9** Power lines within and outside the treatment area during an aerial survey are identified and accurately assessed to support safe operations in vicinity of power lines, including safe flying parallel to wires
- 4 Perform infrastructure inspections**
- 4.1** Infrastructure and condition assessment criteria are verified and understood prior to the inspection
- 4.2** Data capture process is selected based on the type of infrastructure
- 4.3** Various types of structural failures are recognised and recorded
- 4.4** Infrastructure data and records are provided in accordance with client requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AVIW0006 Perform infrastructure inspections using remote operated systems

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- interpreting remote pilot aircraft systems (RPAS) displays
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- performing systematic scan technique for monitoring RPAS, sub-systems (equipment) and devices
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- undertaking fault finding in RPAS
- using automated systems to manage workload
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- aeronautical decision-making processes relevant to RPAS operations
- effective communication
- error management, including error types, causes and consequences
- fatigue risk management
- human factors relevant to RPAS operations
- human performance and its limitations, including the senses, memory and situational awareness
- normal, minimum and maximum fuel pressures or battery/power levels and power draw
- risk identification, analysis and control
- RPAS as applicable to rating/endorsement requirements, including:
 - battery/fuel/power system:
 - use of a schematic diagram of battery/fuel/power system to explain layout and normal operating procedures
 - likely faults that may affect battery/fuel/power system
 - emergency operating procedures for battery/fuel/power system
 - operation of /battery/fuel/power selector panel or display
 - use of cross-feed or power distribution
 - full battery/fuel capacity and fuel grade
 - flight environment information, including :
 - head-up display (HUD) suitable for flight
 - RPAS control systems suitable for flight indications, including height, speed, direction and location
 - electrical system, including:
 - use of a schematic diagram of electrical system to explain type/s of electrical system
 - structural failures
 - likely faults that may affect electrical system
 - emergency operating procedures for electrical system
 - voltage and amperage of battery or power cell
 - number and output of generators
 - methods of circuit protection
 - location of fuses and circuit breakers
 - precautions to be taken when operating electrical devices
 - instruments and displays operated by electrics
 - detection and avoidance systems, including:
 - surveillance and collision avoidance functions of detection and avoidance systems
 - system limitations, selectivity and inhibits

- basic components of detection and avoidance systems
- identification and demonstration of controls or explanation of function of RPAS control station
- detection and avoidance systems visual displays and symbology
- functions of audio alerts and annunciations
- appropriate crew response to multiple detection and avoidance systems events
- recall of radiotelephone procedures following a detection and avoidance system alert
- requirements for a written report of a detection and avoidance systems alert and to whom it must be submitted
- automated systems, including:
 - limitations of automated systems
 - operating procedures for systems, such as flight management system, auto throttle/engine/thrust control, flight director system, automated aircraft navigation systems, and automated engine condition and monitoring system
 - workload management procedures for utilising automated systems
 - warning systems/indicators to identify automated systems failure
- RPAS checklists, including:
 - explanation of the normal system operating procedures of RPAS, sub-systems and devices used to operate specific RPAS, including use of published scans and checklists, immediate action items, warnings and limitations
- stress, workload and time pressure management.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIW0007 Perform aerial mapping and modelling using remote piloted aircraft systems

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the application of skills and knowledge required to conduct aerial mapping and modelling using remote piloted aircraft systems (RPAS), in compliance with the relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes conducting pre-flight operations, performing operational area evaluations, and conducting aerial surveys.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to aircraft operational duties of flight crew and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

Y – Aircraft Operation and Traffic Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Conduct pre-flight actions

- 1.1 Own fitness for flight and planned operations is self-assessed
- 1.2 Operational aircraft type is determined for suitability for type of aerial mapping and modelling operation
- 1.3 Aircraft and role equipment are checked and assessed for serviceability prior to commencing flight operations
- 1.4 Required applicable maintenance documentation is compiled and checked for accuracy and completeness
- 1.5 Role equipment calibration is checked and adjusted as required
- 1.6 Planned aerial mapping and modelling operations are assessed for potential or actual hazards
- 1.7 Fuel/power requirements are determined and established within aerial operational plans
- 1.8 Issues relating to aircraft weight, performance, dimensions, load and meteorological conditions are identified and managed

2 Conduct planning and risk management

- 2.1 Suitability of current and forecast weather is determined
- 2.2 Mapping and modelling plan is developed and used as the basis for aerial operations
- 2.3 Potential and actual hazards and operational requirements are identified, risks to aerial mapping and modelling operations are assessed and appropriate risk controls implemented in accordance with the application management plan
- 2.4 Area map is correctly interpreted
- 2.5 Acceptable aircraft performance for aerial mapping and modelling operational conditions is confirmed through performance planning

- 2.6 Normal and abnormal operational communications and signals are confirmed
- 3 Conduct aerial mapping and modelling**
 - 3.1 Appropriate aerial survey plans are developed for conducting safe aerial mapping and modelling operations
 - 3.2 Operating area boundaries are established and environmentally sensitive areas identified, including areas that are noise sensitive, biologically susceptible, populated and urban, and restricted or dangerous
 - 3.3 Potential emergency or alternate landing areas are identified and/or established for contingency operations
 - 3.4 Environmental hazard factors affecting aerial mapping and modelling operations are considered
 - 3.5 Wind velocity and direction are assessed for effect on operations
 - 3.6 Mapping/modelling operations are conducted safely in accordance with the flight plan
 - 3.7 Aerial mapping/modelling equipment is operated within scope of the plan
 - 3.8 Decisions to suspend or continue safe aerial mapping/modelling are taken based on planned or actual operating conditions
 - 3.9 Power lines within and outside the treatment area during an aerial survey are identified and accurately assessed to support safe operations in vicinity of power lines, including safe flying parallel to wires
- 4 Provide aerial mapping and modelling imagery**
 - 4.1 Selected data is imported into data analysis software according to manufacturer procedures
 - 4.2 Data is evaluated for preliminary indication of non-conformity and trends or patterns
 - 4.3 Findings from data are collated and reported to appropriate persons according to team procedures
 - 4.4 Data is stored for later retrieval according to procedures
 - 4.5 Final inspection is made to ensure work is to workplace expectations and data is presented ready for use

- 4.6 Data recording equipment is checked and stored according to workplace procedures
- 4.7 Workplace documentation is processed according to workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

No equivalent unit.

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIW0007 Perform aerial mapping and modelling using remote piloted aircraft systems

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant aeronautical knowledge
- assessing and checking aircraft and role equipment for flight serviceability
- assessing identified environmental hazard factors
- assessing own fitness for flight and planned operations
- assessing relevant wind velocity and direction
- compiling applicable maintenance documentation
- conducting pre-flight operational planning
- determining relevant aircraft type suitability
- developing, amending and modifying mapping and modelling plans
- establishing and implementing safe operating condition margins during aerial mapping and modelling operations
- establishing operational power requirements for normal and contingency operations
- identifying aerial mapping and modelling hazards
- identifying logistical considerations for management plan
- identifying potential contingency and alternate landing areas
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aerial human factors, including:
 - heat stress and dehydration
 - in-flight distractions
 - maintaining situational awareness
 - mental and physical fatigue
- aerial mapping and modelling role equipment
- applicable regulations that relate to conducting a safe aerial mapping and modelling operation

- aviation risk and fatigue risk management processes
- Civil Aviation Safety Regulation (CASR) Part 61 Manual of Standards (MOS) Schedule 3 Aeronautical Knowledge relevant to aerial application operations
- factors to be considered when determining payload weights for aerial application
- global navigation satellite system (GNSS) equipment and operator procedures
- low-level flight safety hazards and risks
- meteorological factors affecting aircraft flight performance during low-level flight
- relevant aerodynamics and aircraft performance
- terrain following techniques.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIW0008 Conduct aerial search using remote piloted aircraft

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to conduct aerial search using remote piloted aircraft systems (RPAS) in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority and national operating standards.

This unit addresses aviation technical skill requirements (physical, mental and task management abilities) related to air traffic control (ATC) duties that complement the non-technical skills of air traffic controllers and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military air traffic services across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Prepare for search**
 - 1.1** Search information is gained from search leader
 - 1.2** Routes to and from the search area are determined
 - 1.3** Search patterns are confirmed and search zones are entered accurately in unmanned aircraft systems
 - 1.4** Scanning and camera equipment are checked for faults and addressed before search operation
- 2 Conduct search operation**
 - 2.1** Search times are monitored and actioned
 - 2.2** Appropriate search phase is amended when required
 - 2.3** Search information is coordinated and/or relayed to appropriate personnel
 - 2.4** Search areas are systematically scanned and updates communicated to relevant personnel
 - 2.5** Critical search objective information is communicated efficiently to search team
- 3 Review search operation**
 - 3.1** Search operation is de-briefed with relevant personnel
 - 3.2** Search information is reviewed with search team
 - 3.3** Relevant documentation is completed and provided to relevant personnel

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AVIW0008 Conduct aerial search using remote piloted aircraft

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating clearly and concisely to relevant stakeholders using standard and non-standard phrases
- communicating effectively when providing search and rescue (SAR) alerting and emergency response
- comprehending incoming information and responding effectively
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring critical search event times
- operating equipment in accordance with standard operating procedures (SOPs)
- regulating own workload in abnormal or emergency situations
- responding and updating checklists
- responding to search alerting
- responding to stressful situations with a considered and measured approach
- using emergency messages, phrases and signals
- working systematically with required attention to detail.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- documentation for providing SAR alerting and emergency response, including recording emergency and/or abnormal flight related information
- search patterns
- in-flight emergency response (IFER) documentation
- IFER management process
- jurisdictions related to SAR for different aircraft operations
- relevant and environmental procedures and regulations
- SAR time (SARTIME) criteria and emergency phase declaration
- SAR watch (SARWATCH) criteria and emergency phase declaration
- SAR organisations and authorities

- types of in-flight emergencies
- use of checklists and other documentation.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIW0009 Conduct aerial delivery/retrieval operations using remote piloted aircraft systems

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to conduct aerial delivery/retrieval operations using remote piloted aircraft systems (RPAS) in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

This unit addresses aviation technical skill requirements (physical, mental and task management abilities) related to air traffic control (ATC) duties that complement the non-technical skills of air traffic controllers and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military air traffic services across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

1 Prepare for delivery and retrieval

- 1.1 External load characteristics and dimensions are determined and calculated
- 1.2 Aerial delivery equipment is prepared and checked as required in accordance with equipment manuals and publications
- 1.3 Remote pilot aircraft connection system is prepared and checked
- 1.4 Safety hazards are identified and addressed using established procedures
- 1.5 Remote pilot aircraft power availability is calculated to transport load effectively
- 1.6 Wind speed and direction are determined which may affect operation
- 1.7 Load-lifting location and surrounds are checked for suitability
- 1.8 Plan for delivery/retrieval is followed

2 Perform load delivery/retrieval operation

- 2.1 Remote piloted aircraft operational checks are conducted
- 2.2 Load is connected/released to/from remote pilot aircraft using appropriate operational method
- 2.3 Situational awareness of RPAS load stability and aircraft flight performance is maintained
- 2.4 External load is delivered/retrieved at nominated delivery point
- 2.5 Operation documentation is completed to organisational standards

3 Respond to external load operational emergencies and abnormal situations

- 3.1 External load operational emergencies are identified, diagnosed and communicated
- 3.2 External load operational emergency or remedial actions are undertaken to maintain safety of flight

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for AVIW0009 Conduct aerial delivery/retrieval operations using remote piloted aircraft systems

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant remote pilot aircraft systems (RPAS) aeronautical knowledge
- applying relevant legislation and workplace procedures
- completing aerial delivery equipment assembly
- completing relevant documentation
- determining wind speed and direction
- identifying and using required communications technology
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating aerial delivery equipment
- operating and adapting to differences in communications equipment in accordance with standard operating procedures (SOPs)
- performing weight calculations
- planning own work, predicting consequences and identifying improvements
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly in accordance with workplace procedures
- using communication skills for RPAS control
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- approach and overshoot considerations
- approved operational procedures and processes for different external load-lifting operations
- cargo hook system and aerial delivery equipment capabilities and limitations
- Civil Aviation Safety Regulation (CASR) Part 61 Manual of Standards (MOS) Schedule 3 Aeronautical Knowledge relevant to external load operations
- correct aerial delivery equipment configuration
- external load safety and configuration
- external load-lifting emergency procedures
- external load-lifting risk assessment principles
- external load-lifting verbal/non-verbal communication procedures
- organisational policies and procedures for load-lifting operations
- practices concerning external load-lifting operations
- procedures and protocols for using communications systems during an emergency
- typical problems that may occur when conducting external load-lifting operations and appropriate action and solutions
- work health and safety (WHS) issues applicable to operations, aircraft and personnel safety.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIW0010 Operate an aerobridge

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to operate an aerobridge in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes pre-positioning the aerobridge, docking with an aircraft on arrival, and retracting the aerobridge on departure.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to equipment and system operations of ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

W – Equipment and Systems Operations

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

1 Pre-position aerobridge

- 1.1** Aerobridge pre-operational checks are conducted in accordance with workplace procedures and manufacturer instructions
- 1.2** Aerobridge console is operated in accordance with workplace procedures and manufacturer instructions
- 1.3** Appropriate safety checks are made to ensure roll-door is down and apron is clear in accordance with workplace procedures and regulatory requirements
- 1.4** Floodlights are employed during low-visibility operations in accordance with workplace procedures
- 1.5** Aerobridge is pre-positioned for aircraft type in accordance with workplace procedures and manufacturer instructions
- 1.6** Roll-door is secured and closed in readiness for aircraft arrival in accordance with regulatory requirements

2 Deploy aerobridge

- 2.1** Aerobridge is manoeuvred towards the aircraft in accordance with manufacturer instructions and workplace procedures for type of aircraft being docked
- 2.2** Aerobridge movement is monitored and controlled through docking procedure
- 2.3** Aerobridge is placed on auto level in accordance with manufacturer instructions
- 2.4** Aerobridge roll-door and aircraft door are opened and safety shoe positioned in accordance with workplace procedures and regulatory requirements

3 Retract and stow aerobridge

- 3.1** Aerobridge safety strap is retracted in accordance with workplace procedures
- 3.2** Aerobridge is retracted from aircraft to minimum safety distance using aerobridge console in accordance with manufacturer instructions and workplace procedures
- 3.3** Canopy is retracted, lowered and locked into position in accordance with workplace procedures and manufacturer instructions
- 3.4** Aerobridge pre-position function is selected and aerobridge returned to PARK position after aircraft

departure

- 3.5 Roll-door is closed and secured in accordance with regulatory requirements
- 3.6 Aerobridge console is deactivated and power isolated in accordance with manufacturer instructions and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIW2002 Operate an aerobridge.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIW0010 Operate an aerobridge

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying identified problems promptly in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency procedures
- features and differences in operating characteristics for various types of aerobridges in operation at Australian airports

- manufacturer instructions for checking and operating an aerobridge
- principles of aerobridge operation
- problems that may occur when operating an aerobridge and appropriate action that should be taken in each case
- relevant Australian Standards
- relevant information/documents, including:
 - aerobridge operational checklists
 - conditions of service, legislation and industrial agreements, including workplace agreements and awards
 - flight schedules
 - induction and training materials
 - manufacturer specifications and instructions for aerobridge being operated
 - workplace instructions, and job specification
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders
- relevant WHS and environmental procedures and regulations
- risks that exist when operating an aerobridge and related risk control procedures and precautions
- workplace procedures for operating an aerobridge.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- acceptable means of simulation assessment

AVIW0011 Operate baggage tug

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to operate a baggage tug, in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes conducting pre-operational checks; operating baggage tug; and shutting down, parking and storing baggage tugs.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to equipment and system operations of flight or ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

W – Equipment and Systems Operations

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

1 Conduct pre-operational checks on baggage tug

- 1.1 Personal protective equipment (PPE) is selected and used in accordance with workplace procedures
- 1.2 Pre-operational checks of baggage tug are conducted in accordance with workplace procedures and manufacturer instructions
- 1.3 Fluid levels are topped up as required in accordance with workplace procedures
- 1.4 Equipment faults and malfunctions identified during pre-operational checks are rectified or reported in accordance with workplace procedures and regulatory requirements

2 Operate baggage tug

- 2.1 Baggage tug is manoeuvred to required location in preparation for haulage operations in accordance with workplace procedures
- 2.2 Baggage tug is coupled to baggage carts or other ramp equipment as directed
- 2.3 Baggage tug is operated in accordance with workplace procedures and manufacturer instructions
- 2.4 Hazards associated with operating a baggage tug are identified and appropriate precautions are taken in accordance with work health and safety (WHS)/occupational health and safety (OHS) regulations and workplace hazard management strategies
- 2.5 Baggage cart or ramp equipment is hauled to required location and uncoupled in accordance with workplace procedures, local instructions and relevant regulatory requirements
- 2.6 Instructions for next operation are obtained and baggage tug driven to required location in accordance with workplace procedures, local instructions and regulatory requirements

3 Shut down, park and store baggage tug

- 3.1 Tug is manoeuvred to allocated parking or storage area at completion of scheduled haulage activities
- 3.2 Post-operational checks of baggage tug are conducted in accordance with workplace procedures and

manufacturer instructions

- 3.3 Equipment faults and malfunctions identified during post-operational checks are rectified or reported in accordance with workplace procedures and regulatory requirements
- 3.4 Baggage tug is refuelled and fluid levels topped up in accordance with workplace procedures, and manufacturer instructions
- 3.5 Electric baggage tug is connected to electrical recharging supply in accordance with workplace procedures and manufacturer instructions
- 3.6 Equipment log or operational documentation is completed in accordance with workplace procedures, local instructions and regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIW2010 Operate baggage tug.

Assessment Requirements for AVIW0011 Operate baggage tug

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards, including:
 - dust
 - jet blast
 - noise
 - obstacles in operational area
 - other vehicles/aircraft in the vicinity
 - personnel in operational area
- conducting pre-operational checks, including:
 - battery charge
 - fluid levels
 - fuel level visual inspection for faults or defects
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritise work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying identified problems promptly in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and

WHS standards

- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- emergency procedures
- personal protective equipment including:
 - hearing protection
 - protective clothing
 - safety footwear
 - safety gloves
- features and differences in operating characteristics for various types of baggage tugs in operation at Australian airports
- layout of airport and location of aircraft gates
- manufacturer instructions for checking and operating a baggage tug
- principles of baggage tug operation
- problems that may occur when operating a baggage tug and appropriate action that should be taken in each case
- relevant Australian Standards
- relevant information/documents, including:
 - baggage tug operational checklists
 - conditions of service, legislation and industrial agreements, including workplace agreements and awards
 - equipment logs/records
 - flight schedules and aircraft gate schedules
 - induction and training materials
 - licence requirements of the relevant licensing authority
 - local instructions
 - manufacturer specifications and instructions for baggage tug being operated
 - pre- and post-operational checklists
 - workplace instructions and job specification
- relevant local instructions for baggage tug operation
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders related to ground operations
- relevant WHS/OHS and environmental protection procedures and regulations
- risks that exist when operating a baggage tug and related risk control procedures and precautions

- workplace procedures for operating a baggage tug.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- acceptable means of simulation assessment.

AVIW0012 Operate aircraft refuelling nozzle

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to operate aircraft refueling nozzles in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes preparing for refuelling operations, carrying out refuelling operations and completing post-refuelling operations.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to equipment and system operations of flight or ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

W – Equipment and Systems Operations

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare for refuelling operations

- 1.1** Appropriate personal protective equipment (PPE) is selected and fitted correctly
- 1.2** Pre-operational checks of equipment are conducted in accordance with workplace procedures
- 1.3** Hazards, problems and/or defects identified during pre-operational checks are reported/rectified in accordance with workplace procedures
- 1.4** Outcomes of pre-operational checks are recorded in accordance with workplace procedures
- 1.5** Refuelling site is selected

2 Carry out refuelling operations

- 2.1** Clearance to commence refuelling is obtained
- 2.2** Nozzle is grounded and bonding lead is connected to aircraft in accordance with workplace procedures
- 2.3** Instructions regarding fuel quantity are obtained
- 2.4** Refuelling auxiliary equipment is configured for safe fuel delivery
- 2.5** Aircraft is refuelled in accordance with workplace procedures

3 Complete post-refuelling operations

- 3.1** Refuelling completion operations are conducted in accordance with workplace procedures
- 3.2** Fuel sample is taken and visual check is made prior to aircraft departure in accordance with workplace procedures
- 3.3** Refuelling equipment is disconnected and stowed in accordance with workplace procedures
- 3.4** Post-refuelling documentation is completed and processed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIW2029 Operate aircraft refuelling nozzle.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIW0012 Operate aircraft refuelling nozzle

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards must include one or more of the following:
 - contamination of or from materials being handled
 - dust
 - fuel vapours
 - hazardous or dangerous materials
 - heat
 - hot engines, static electricity, sparks and other forms of ignition
 - jet blast or rotor wash
 - noise
 - other fuelling additives
 - other aircraft or vehicles on tarmac
 - rotating propellers
 - spills, leakages and ruptures
- communicating effectively with others
- completing relevant documentation
- conducting pre-operational checks and reporting/rectifying identified hazards, problems and/or defects
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modify activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule

- operating electronic communications equipment to required protocol
- preparing for refuelling operations
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying identified problems promptly in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- taking fuel sample and conducting visual check prior to aircraft departure
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- pre-operational checks, including:
 - auxiliary equipment checks
 - documentation
 - fire extinguisher
 - PPE
 - radio check
 - serviceability of ladder or portable steps
 - sufficient fuel
 - visual inspection for leaks, defects and obstructions
- refuelling operations, including:
 - open port refuelling
 - pressure refuelling
- emergency procedures
- manufacturer instructions for equipment used in quality control processes
- problems that may occur when operating an aircraft refuelling nozzle and appropriate action that should be taken in each case
- quality control principles and processes for operating an aircraft refuelling nozzle
- relevant information/documents, including:
 - airport airside driver handbook
 - conditions of service, legislation and industrial agreements, including workplace agreements and awards
 - flight schedules
 - induction and training manuals
 - relevant International Air Transport Association (IATA) fuel guidelines

- loading and fuelling operational checklists
- manufacturer specifications and instructions for fueller/dispenser vehicle and auxiliary equipment
- workplace instructions and job specification
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders and other regulations for quality control processes carried out when operating an aircraft refuelling nozzle
- relevant WHS/OHS and environmental procedures and regulations
- risks that exist when operating an aircraft refuelling nozzle and related risk control procedures and precautions
- selection and correct fitment of PPE required for aircraft refuelling, including:
 - approved clothing
 - gloves
 - hearing protection
 - high visibility clothing
 - mask or respirator
 - safety glasses
 - safety headwear and footwear
- workplace procedures for conducting various quality control operations related to operating an aircraft refuelling nozzle.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- acceptable means of simulation assessment

AVIW0013 Be airborne extracted by suspended rope

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to be airborne extracted by suspended rope in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes applying aircraft safety procedures, preparing for suspended extraction and extracting using fixed suspended extraction rope.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to equipment and system operations of flight or ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

W – Equipment and Systems Operations

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Apply aircraft safety procedures

- 1.1 Dress and equipment are secured for operating in and around a helicopter
- 1.2 Helicopter is approached, entered and exited in a safe manner in accordance with workplace procedures and/or aircrew instructions
- 1.3 Individual seating is occupied and restraint devices applied
- 1.4 Identified hazards are communicated to team members
- 1.5 Aircrew or safety officer instructions are followed
- 1.6 Environmental conditions and alternative routes to/from helicopter are identified

2 Prepare for suspended extraction

- 2.1 Extraction by suspended rope instructions are received and confirmed as required
- 2.2 Workplace procedures, work health and safety (WHS)/occupational health and safety (OHS) requirements and safety control measures are applied
- 2.3 Operational and suspended rope extraction equipment, including personal protective equipment (PPE), is selected and fitted in accordance with workplace procedures
- 2.4 Damage to operational, suspended extraction and safety equipment is reported and remedial action is taken in accordance with workplace procedures

3 Extract using fixed suspended extraction rope

- 3.1 Extraction point is identified and attended in accordance with instructions
- 3.2 Individual equipment safety checks are conducted in accordance with workplace procedures
- 3.3 Individual extraction equipment is secured to fixed suspended rope ready for extraction in accordance with workplace procedures

- 3.4 Security device is attached to individual and operational equipment in accordance with workplace procedures
- 3.5 Extraction techniques are performed in accordance with workplace procedures
- 3.6 Aircraft emergency and suspended extraction contingency procedures are applied as required in accordance with workplace procedures
- 3.7 Extraction and operational equipment are monitored for stability during extraction
- 3.8 Verbal and non-verbal communications are maintained

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIW2030 Be airborne extracted by suspended rope.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIW0013 Be airborne extracted by suspended rope

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying individual equipment safety checks must include:
 - harness and ascender
 - karabiner attached to bottom loop
 - operational equipment
 - personal protective equipment (PPE) checks
- applying security devices, including:
 - chest ascender
 - winch collar
- applying organisational tactics, techniques and procedures
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying suspended extraction emergency and contingency procedures in accordance with workplace procedures
- communicating effectively with others, including:
 - hand signals
 - interpersonal communications
 - radio
- completing relevant documentation
- identifying, operating and controlling applicable operational equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- maintaining situational awareness when conducting suspended extraction operations
- modifying activities depending on workplace contingencies, situations and environments, including:
 - climate and weather variations
 - geographical and geological variations, including sloping and unstable ground

- ground conditions including dust and other particles
- variations due to vegetation and urban structures
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- observing helicopter safety including safe approach and exit
- operating helicopter restraint, safety and emergency equipment
- performing extraction techniques in accordance with workplace procedures for one or more of the following:
 - aborted operation
 - aircraft collision
 - aircraft crash landing
 - aircraft fire
 - aircraft malfunction prior to take-off
 - collision with others or obstacles
 - damaged or kinked rope
 - emergency landing procedures
 - engine failure over landing site
 - fixed rope caught in obstacles
 - in a Defence context – procedures to evade hostile action against aircraft or self
 - loss of visibility
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying identified problems promptly in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self, others or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- characteristics of helicopters, including safety features and operating requirements
- hazards that exist when being airborne extracted by suspended rope, including:
 - buildings
 - dust
 - livestock
 - masts/aerials

- native fauna
- poor visibility
- public
- terrain
- trees
- vehicles
- weather conditions
- wire/power lines/fences
- in a Defence context, relevant Defence Orders and Instructions
- manufacturer instructions for equipment used for airborne extraction by suspended rope
- problems that may occur when being airborne extracted by suspended rope
- relevant Australian Standards
- relevant information/documents, including:
 - induction and training materials
 - operations manuals
 - workplace procedures and instructions, and job specifications
- PPE including:
 - eye protection goggles
 - footwear
 - hearing protection
 - helmet
 - high visibility clothing
 - life jacket
 - personal lighting and beacons
 - protective clothing
 - rappelling gloves
- relevant legislation, regulations, organisational policy and procedures in relation to airborne extraction by suspended rope
- relevant WHS/OHS and environmental procedures and regulations
- risks that exist when being airborne extracted by suspended rope
- operational and suspended extraction equipment, including:
 - commercial in-service rappelling harness
 - communications equipment
 - improvised tubular webbing harness
 - individual load carrying equipment (ILCE)
 - military equipment relevant to airborne extraction operation
 - rope attachment device (locking karabiner)
 - search and rescue equipment
- suspended extraction procedures, including:
 - normal

- abnormal
- emergency
- suspended extraction safety equipment operation.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

 - weather conditions
- wire/power lines/fences ascending suspended equipment and emplaning aircraft in accordance with supervisor or aircrew instructions
- conducting aircraft emergency and suspended extraction contingency procedures must include one or more of the following:

- aborted operation
- aircraft collision
- aircraft crash landing
- aircraft fire
- aircraft malfunction prior to take-off
- collision with others or obstacles
- damaged or kinked rope
- emergency landing procedures
- engine failure over landing site
- extraction equipment caught in obstacles
- in a Defence context – procedures to evade hostile action against aircraft or self
- loss of visibility
- communicating effectively with others, including:
 - interpersonal communications
 - radio
 - hand signals
- completing relevant documentation
- identifying, operating and controlling applicable operational equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- maintaining situational awareness during suspended extraction operations
- modifying activities depending on workplace contingencies, situations and environments, including:
 - climate and weather variations
 - geographical and geological variations including sloping and unstable ground
 - variations due to vegetation and urban structures
 - ground conditions including dust and other particles
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring extraction and operational equipment stability during extraction
- monitoring work activities in terms of planned schedule
- observing helicopter safety, including safe approach and exit
- operating helicopter restraint, safety and emergency equipment
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying identified problems promptly in accordance with regulatory requirements and workplace procedures
- selecting and using required PPE conforming to industry and WHS standards, including:
 - eye protection goggles
 - footwear
 - hearing protection
 - helmet

- high visibility clothing
- life jacket
- personal lighting and beacons
- protective clothing
- rappelling gloves
- working collaboratively with others
- working systematically with required attention to detail without injury to self, others or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- characteristics of helicopters, including their safety features and operating requirements
- hazards that exist when being airborne extracted using suspended extraction equipment
- in a Defence context, relevant Defence Orders and Instructions
- manufacturer instructions for equipment used for airborne extraction using suspended extraction equipment
- problems that may occur when being airborne extracted using suspended extraction equipment
- relevant Australian Standards
- relevant information/documents, including:
 - induction and training materials
 - operations manuals
 - workplace procedures and instructions, and job specification
- relevant legislation, regulations, organisational policy and procedures in relation to airborne extraction using suspended extraction equipment
- relevant WHS/OHS and environmental procedures and regulations
- risks that exist when being airborne extracted using suspended extraction equipment
- suspended extraction procedures, including:
 - normal
 - abnormal
 - emergency
- suspended extraction safety equipment operation, including:
 - casualty evacuation equipment
 - casualty evacuation litter
 - caving ladder
 - commercial in-service rappelling harness
 - communications equipment
 - improvised tubular webbing harness

- mechanical friction device and lanyard
- military equipment relevant to airborne extraction operation
- rope attachment device (locking karabiner)
- search and rescue equipment
- winch.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIW0015 Fast rope from a helicopter

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to fast rope from a helicopter in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes applying aircraft safety procedures, preparing for fast roping operation, and explaining and completing on-board procedures. It also includes fast roping from helicopter and de-servicing fast rope equipment.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to equipment and system operations of flight or ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

W – Equipment and Systems Operations

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Apply aircraft safety procedures

- 1.1** Dress and equipment are secured for operating in and around a helicopter
- 1.2** Helicopter is approached, entered and exited in a safe manner in accordance with workplace procedures and/or flight crew instructions
- 1.3** Individual seating is occupied and restraint devices applied
- 1.4** Identified hazards are communicated to fast rope team members
- 1.5** Flight crew instructions are followed
- 1.6** Environmental conditions and alternative routes to/from helicopter are identified

2 Prepare for fast roping operation

- 2.1** Fast roping descent instructions are received and confirmed as required
- 2.2** Workplace procedures, work health and safety (WHS)/occupational health and safety (OHS) requirements and safety control measures are applied
- 2.3** Operational and fast rope equipment, including personal protective equipment (PPE) is selected and fitted in accordance with workplace procedures
- 2.4** Individual pre-flight check of fast rope equipment is conducted
- 2.5** Damage to operational, fast rope and safety equipment is reported and remedial action is taken in accordance with workplace procedures

3 Emplane and complete on-board procedures

- 3.1** Aircraft is approached and emplaned in accordance with workplace procedures
- 3.2** Fast ropes are secured to allocated rope attachment device, checked and prepared for flight
- 3.3** Ropers and operational equipment are secured prior to flight
- 3.4** Flight crew orders and instructions are complied with

- 3.5 Fast ropes and operational equipment are monitored during flight
 - 3.6 Communications and directions are interpreted and relayed to ropers
 - 3.7 Individual in-flight safety checks are conducted
- 4 Fast rope from helicopter**
- 4.1 Fast rope exit positions are adopted under supervision of flight crew or safety officer
 - 4.2 Positions are resumed in aircraft on abort instruction from flight crew
 - 4.3 Fast ropes are deployed on instruction from flight crew or safety officer
 - 4.4 Aircraft is exited on instruction of flight crew or safety officer
 - 4.5 Aircraft emergency and fast rope contingency procedures are implemented as required
 - 4.6 Fast rope is descended in a controlled manner
 - 4.7 Landing and clearance of roping point is conducted in accordance with workplace procedures
 - 4.8 Equipment is gathered and taken to designated team assembly point
- 5 De-service fast rope equipment**
- 5.1 Area is cleared in preparation for de-servicing of fast rope equipment in accordance with workplace procedures
 - 5.2 Fast rope and operational equipment are de-serviced and stowed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIW2032 Fast rope from a helicopter.

Assessment Requirements for AVIW0015 Fast rope from a helicopter

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying organisational tactics, techniques and procedures
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying fast rope exit positions, including:
 - crouching
 - kneeling
 - sitting
- approaching and exiting helicopter in a safe manner in accordance with workplace procedures and/or flight crew instructions
- communicating effectively with others, including:
 - hand signals
 - interpersonal communications
 - radio
- completing relevant documentation
- conducting individual fast rope equipment and operational equipment pre-flight and in-flight checks on:
 - communications equipment
 - incident response equipment
 - individual load carrying equipment (ILCE)
 - military equipment relevant to fast roping operation
 - search and rescue equipment
- conducting individual in-flight safety checks, including:
 - equipment checks
 - fast roping equipment checks
 - personal protective equipment (PPE) checks
 - seatbelt/restraint device

- weapons checks
- descending fast rope in a controlled manner
- following relevant legislation and workplace procedures
- identifying, operating and controlling fast rope and operational equipment
- implementing contingency plans in one or more of the following situations:
 - aborted operation
 - aircraft fire
 - aircraft malfunction prior to take-off
 - aircraft collision
 - aircraft crash landing
 - damaged or kinked rope
 - emergency landing procedures
 - emergency retrieval of roper/s
 - engine failure over landing site
 - fast rope caught in tree
 - in a Defence context – procedures to evade hostile action against aircraft or self
 - loss of roper control during descent
 - loss of visibility
 - roper collision with others or obstacles
 - roper falls on descent
 - roper hang-up
 - roper lost brake
 - roper injury on landing
 - roper inversion
- implementing work health and safety (WHS) procedures and relevant regulations
- modifying activities depending on workplace contingencies, situations and environments, including:
 - climate and weather variations
 - geographical and geological variations including sloping and unstable ground
 - variations due to vegetation and urban structures
 - ground conditions including dust and other particles
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating helicopter restraint, safety and emergency equipment
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying identified problems promptly in accordance with regulatory requirements and workplace procedures
- selecting and using required PPE conforming to industry and WHS standards, including:
 - eye protection goggles
 - footwear

- hearing protection
- helmet
- high visibility clothing
- life jacket
- personal lighting and beacons
- protective clothing
- rappelling gloves
- working collaboratively with others
- working systematically with required attention to detail without injury to self, others or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- assembly point or marshalling area
- characteristics of helicopters, including safety features and operating requirements
- hazards that exist when fast roping from a helicopter
- in a Defence context, relevant Defence Orders and Instructions
- manufacturer instructions for equipment used for fast roping from a helicopter
- problems that may occur when fast roping from a helicopter
- relevant Australian Standards
- relevant information/documents, including:
 - induction and training materials
 - operations manuals
 - workplace procedures and instructions and job specification
- relevant legislation, regulations, organisational policy and procedures in relation to fast roping from a helicopter
- relevant WHS and environmental procedures and regulations
- hazards, including:
 - buildings
 - dust
 - livestock
 - masts/aerials
 - native fauna
 - poor visibility
 - public
 - terrain
 - trees
 - vehicles

- weather conditions
- wire/power lines/fences
- risks that exist when fast roping from a helicopter
- safety equipment operation.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIW0016 Rappel from a helicopter

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to rappel from a helicopter in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes applying aircraft safety procedures, preparing for rappelling operations, and explaining and completing on-board procedures. It also includes rappelling from a hovering helicopter and de-servicing rappelling equipment.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to equipment and system operations of flight or ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

W – Equipment and Systems Operations

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---|---|
| 1 Apply aircraft safety procedures | <p>1.1 Dress and equipment are secured for operating in and around a helicopter</p> <p>1.2 Helicopter is approached, entered and exited in a safe manner in accordance with workplace procedures and/or flight crew instructions</p> <p>1.3 Individual seating is occupied and restraint devices applied</p> <p>1.4 Identified hazards are communicated to rappel team members</p> <p>1.5 Flight crew instructions are followed</p> <p>1.6 Environmental conditions and alternative routes to/from helicopter are identified</p> |
| 2 Prepare for rappelling operation | <p>2.1 Rappelling descent instructions are received and confirmed as required</p> <p>2.2 Workplace procedures, work health and safety (WHS)/occupational health and safety (OHS) requirements and safety control measures are applied</p> <p>2.3 Operational and rappel equipment, including personal protective equipment (PPE), is selected and fitted in accordance with workplace procedures</p> <p>2.4 Individual pre-flight check of rappel equipment is conducted</p> <p>2.5 Damage to operational, rappel and safety equipment is reported and remedial action taken in accordance with workplace procedures</p> |
| 3 Emplane and complete on-board procedures | <p>3.1 Aircraft is approached and emplaned in accordance with workplace procedures</p> <p>3.2 Ropes are secured to allocated rope attachment device, checked and prepared for flight</p> <p>3.3 Rappellers and operational equipment are secured prior to flight</p> <p>3.4 Flight crew orders and instructions are complied with</p> |

- 3.5 Rappelling and operational equipment are monitored during flight
- 3.6 Communications and directions are interpreted and relayed to rappellers
- 3.7 Individual in-flight safety checks are conducted
- 4 Rappel from helicopter**
 - 4.1 Rappelling exit positions are adopted under supervision of flight crew or safety officer
 - 4.2 Positions are resumed in aircraft on abort instruction from flight crew
 - 4.3 Aircraft is exited on instruction of flight crew or safety officer
 - 4.4 Descent is undertaken in a controlled manner in accordance with workplace procedures
 - 4.5 Aircraft emergency and rappelling contingency procedures are implemented as required
 - 4.6 Landing is conducted in a controlled manner in accordance with workplace procedures
 - 4.7 Rappel signals are communicated to flight crew once descent is complete
 - 4.8 On landing, rope is disconnected and landing area is cleared in accordance with workplace procedures
 - 4.9 Equipment is gathered and taken to designated team assembly point
- 5 De-service rappel equipment**
 - 5.1 Area is cleared in preparation for de-servicing of rappel equipment in accordance with workplace procedures
 - 5.2 Rappelling and operational equipment is de-serviced and stowed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIW2033 Rappel from a helicopter.

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIW0016 Rappel from a helicopter

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying organisational tactics, techniques and procedures
- applying precautions and required action to minimise, control or eliminate identified hazards
- approaching and exiting helicopter in a safe manner in accordance with workplace procedures and/or flight crew instructions
- adopting rappel exit positions, including:
 - forward exit
 - 'L' position
 - other doorway rappel exit positions in accordance with operator SOP
- communicating effectively with others, including:
 - hand signals
 - interpersonal communications
 - radio
- completing relevant documentation
- conducting individual in-flight safety checks, including:
 - equipment checks
 - rappelling equipment checks
 - personal protective equipment (PPE) checks
 - seatbelt/restraint device
- conducting rappel, operational and safety equipment individual pre-flight and in-flight checks
- descending landing in a controlled manner in accordance with workplace procedures
- following relevant legislation and workplace procedures
- identifying, operating and controlling rappelling and operational equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- maintaining situational awareness when conducting rappelling operations

- modifying activities depending on workplace contingencies, situations and environments, including:
 - climate and weather variations
 - geographical and geological variations including sloping and unstable ground
 - variations due to vegetation and urban structures
 - ground conditions, including dust and other particles
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating helicopter restraint, safety and emergency equipment
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying identified problems promptly in accordance with regulatory requirements and workplace procedures
- selecting and using required PPE conforming to industry and WHS standards, including:
 - eye protection goggles
 - footwear
 - hearing protection
 - helmet
 - high visibility clothing
 - leg bags
 - life jacket
 - personal lighting and beacons
 - protective clothing
 - rappelling gloves
- working collaboratively with others
- working systematically with required attention to detail without injury to self, others or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- assembly point or marshalling area
- characteristics of helicopters, including safety features and operating requirements
- hazards that exist when rappelling from a helicopter, including:
 - buildings
 - dust
 - livestock
 - masts/aerials
 - native fauna

- poor visibility
- public
- terrain
- trees
- vehicles
- weather conditions
- wire/power lines/fences
- in a Defence context, relevant Defence Orders and Instructions
- manufacturer instructions for equipment used for rappelling from a helicopter
- problems that may occur when rappelling from a helicopter
- aircraft and emergency rappelling contingency procedures, including:
 - aircraft collision
 - aircraft crash landing
 - aircraft fire
 - aircraft malfunction prior to take-off
 - damaged or kinked rope
 - emergency landing procedures
 - emergency retrieval of rappeller/s
 - engine failure over landing site
 - in a Defence context – procedures to evade hostile action against aircraft or self
 - loss of rappel control during descent
 - loss of visibility
 - rappeller collision with others or obstacles
 - rappeller hang-up
 - rappeller lost brake
 - rappeller injury on landing
 - rappeller inversion
 - rappeller lost balance during transition (premature exit)
 - rappelling rope caught in tree
- relevant Australian Standards
- relevant information/documents, including:
 - induction and training materials
 - operations manuals
 - workplace procedures and instructions, and job specification
- relevant legislation, regulations, organisational policy and procedures in relation to rappelling from a helicopter
- relevant WHS and environmental procedures and regulations
- risks that exist when rappelling from a helicopter
- operational and rappel safety equipment operation, including:
 - commercial in-service rappelling harness

- communications equipment
- descending device/s
- descent rope
- improvised tubular webbing harness
- incident response equipment
- individual load carrying equipment (ILCE)
- military equipment relevant to rappelling operation
- search and rescue equipment.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIW0017 Operate aircraft embarkation and disembarkation equipment

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to operate aircraft embarkation and disembarkation equipment in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes conducting pre-operational checks, operating embarkation and disembarkation equipment, and retracting and storing embarkation and disembarkation equipment.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to equipment and system operations of flight or ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Conduct pre-operational checks	<p>1.1 Personal protective equipment (PPE) is selected and used in accordance with workplace procedures</p> <p>1.2 Pre-operational checks of embarkation/disembarkation equipment are conducted in accordance with workplace procedures and manufacturer instructions</p> <p>1.3 Fluid levels are topped up as required in accordance with workplace procedures</p> <p>1.4 Equipment faults and malfunctions identified during pre-operational checks are rectified or reported in accordance with workplace procedures and regulatory requirements</p>
2 Operate embarkation and disembarkation equipment	<p>2.1 Embarkation and disembarkation equipment is pre-positioned to assigned location in preparation for aircraft arrival in accordance with workplace procedures</p> <p>2.2 Embarkation and disembarkation equipment is manoeuvred to aircraft and positioned against fuselage in preparation for passenger embarkation/disembarkation in accordance with workplace procedures</p> <p>2.3 Embarkation and disembarkation equipment is operated in accordance with workplace procedures and manufacturer instructions</p> <p>2.4 Hazards associated with operating embarkation and disembarkation equipment are identified and appropriate precautions are taken in accordance with work health and safety (WHS)/occupational health and safety (OHS) regulations and workplace hazard management strategies</p>
3 Retract and store embarkation and disembarkation equipment	<p>3.1 Equipment is withdrawn from aircraft and manoeuvred to assigned storage bay/area at completion of loading activities in accordance with workplace procedures and local instructions</p> <p>3.2 Post-operational checks of equipment are conducted in accordance with workplace procedures and manufacturer instructions</p> <p>3.3 Equipment faults and malfunctions identified during</p>

post-operational checks are rectified or reported in accordance with workplace procedures and regulatory requirements

- 3.4 Embarkation/disembarkation equipment is refuelled and fluid levels are topped up in accordance with workplace procedures, relevant regulatory requirements and manufacturer instructions
- 3.5 Equipment log or operational documentation is completed in accordance with workplace procedures, local instructions and regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIW3003 Operate aircraft embarkation and disembarkation equipment.

Assessment Requirements for AVIW0017 Operate aircraft embarkation and disembarkation equipment

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- conducting pre- and post-operational checks, including:
 - battery charge
 - fluid levels
 - fuel level
 - visual inspection for faults or defects
- identifying and correctly using equipment required when operating aircraft embarkation and disembarkation equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying identified problems promptly in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards, including:
 - hearing protection
 - protective clothing

- safety footwear
- safety gloves
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- emergency procedures
- features and differences in operating requirements for various types of embarkation/disembarkation equipment in operation at Australian airports
- hazards and associated risks that may exist when operating embarkation/disembarkation equipment and related risk control procedures and precautions
- layout of airport and location of aircraft gates
- manufacturer instructions for checking and operating embarkation/disembarkation equipment
- people to consult about operating embarkation/disembarkation equipment, including:
 - aircrew
 - check-in staff
 - ground support staff
 - load controllers
 - other members of the baggage handling and ramp teams
 - supervisors, team leaders and managers
 - technical staff
- principles of operation of embarkation/disembarkation equipment
- problems that may occur when operating embarkation/disembarkation equipment and appropriate action that should be taken in each case
- relevant Australian Standards
- relevant information/documents, including:
 - conditions of service, legislation and industrial agreements, including workplace agreements and awards
 - equipment log/operational record
 - embarkation/disembarkation equipment operational checklists
 - flight schedules
 - induction and training materials
 - licence requirements of the relevant licensing authority
 - manufacturer specifications and instructions for embarkation/disembarkation equipment being operated
 - pre- and post-operational checklists

- workplace instructions and job specification
- relevant legislation and regulations
- relevant local instructions for operating embarkation/disembarkation equipment
- relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders related to ground operations
- relevant WHS and environmental procedures and regulations
- workplace procedures for operating embarkation/disembarkation equipment.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry
- embarkation/disembarkation equipment, including:
 - manually operated mobile stairs
 - motorised mobile stairs
 - other types of embarkation and disembarkation equipment.

Assessment Requirements for AVIW0018 Operate ramp equipment

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate hazards, including:
 - dust
 - jet blast
 - noise
 - other vehicles in the vicinity of the aircraft
 - personnel in the vicinity of the aircraft
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing documentation related to ramp equipment
- conducting pre-operational checks, including:
 - battery charge level
 - fluid levels
 - fuel level
 - visual inspection for faults or defects
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and take appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying identified promptly in accordance with regulatory requirements

- and workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards, including:
 - hearing protection
 - protective clothing
 - safety footwear
 - safety gloves
 - working collaboratively with others
 - working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- emergency procedures
- features and differences in operating characteristics for various types of ramp equipment in operation at Australian airports
- layout of airport and location of aircraft gates
- manufacturer instructions for checking and operating ramp equipment
- people to consult about operating ramp equipment, including:
 - aircrew
 - ground support staff
 - load controllers
 - other members of baggage handling and ramp teams
 - supervisors, team leaders and managers
 - technical staff
- principles of ramp equipment operation
- problems that may occur when operating ramp equipment and appropriate action that should be taken in each case
- relevant Australian Standards
- relevant information/documents, including:
 - conditions of service, legislation and industrial agreements, including workplace agreements and awards
 - equipment logs/records
 - flight schedules
 - induction and training materials
 - licence requirements of the relevant licensing authority
 - local instructions
 - pre- and post-operational checklists

- ramp equipment operational checklists
- workplace instructions and job specification
- manufacturer specifications and instructions for ramp equipment being operated
- relevant local instructions for operating ramp equipment
- ramp equipment, including:
 - baggage carts
 - belt loader
 - up-down pallet loader.
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders related to ground operations
- relevant WHS and environmental procedures and regulations
- risks that exist when operating ramp equipment and related risk control procedures and precautions
- selection and correct fitment of PPE
- workplace procedures for operating ramp equipment.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIW0019 Operate aircraft push-out tug

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to operate an aircraft push-out tug in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes conducting pre-operational checks on a tug, operating tug and conducting post-operational checks of tug.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to equipment and system operations of ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

W – Equipment and Systems Operations

Unit Sector

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Conduct pre-operational checks on a tug

1.1 Personal protective equipment (PPE) is selected and used in accordance with workplace procedures

1.2 Pre-operational checks of tug are conducted in accordance with workplace procedures and manufacturer instructions

1.3 Fluid levels are topped up as required

1.4 Equipment faults and malfunctions identified during pre-operational checks are rectified or reported in accordance with workplace procedures and regulatory requirements

2 Operate tug

2.1 Tug is manoeuvred to aircraft and positioned in preparation for aircraft ground manoeuvres or push-out operations in accordance with workplace procedures

2.2 Tug is coupled to aircraft in accordance with workplace procedures

2.3 Tug is operated in accordance with workplace procedures and manufacturer instructions

2.4 Hazards associated with operating tug are identified and appropriate precautions are taken in accordance with work health and safety (WHS)/occupational health and safety (OHS) regulations and workplace hazard management strategies

2.5 Aircraft ground manoeuvres and/or push-out of aircraft are conducted in accordance with directions of ground maintenance personnel and aircrew

2.6 Tug is uncoupled from aircraft at completion of required operations

2.7 Tug is manoeuvred to allocated parking or storage area at completion of scheduled haulage activities and is shut down

3 Conduct post-operational checks of tug

3.1 Post-operational checks of tug are conducted in accordance with workplace procedures and manufacturer instructions

3.2 Equipment faults and malfunctions identified during

post-operational checks are rectified or reported in accordance with workplace procedures and regulatory requirements

- 3.3 Tug is refuelled and fluid levels are topped up in accordance with workplace procedures and manufacturer instructions
- 3.4 Equipment log or operational documentation is completed in accordance with workplace procedures, local instructions and regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIW3005 Operate aircraft push-out tug.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIW0019 Operate aircraft push-out tug

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards, including:
 - dust
 - jet blast
 - noise
 - other vehicles in the vicinity of aircraft
 - personnel in the vicinity of aircraft
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- conducting pre-operational checks, including:
 - battery charge
 - fluid levels
 - fuel level
 - visual inspection for faults or defects
- conducting aircraft ground manoeuvres, including one or more of the following:
 - movement of a defective aircraft
 - movement of an aircraft around an airport
 - push-out of an aircraft from a gate
 - transport of an aircraft to/from a hanger
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritise work
- modifying activities depending on workplace contingencies, situations and environments

- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic and radio communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying identified problems promptly in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards, including:
 - hearing protection
 - protective clothing
 - safety gloves
 - safety footwear
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- emergency procedures
- features and differences in operating characteristics for various types of aircraft push-out tugs in operation at Australian airports
- layout of airport and location of aircraft gates and equipment storage areas
- manufacturer instructions for checking and operating tug concerned
- people to consult about tug operations, including:
 - aircrew
 - aircraft schedulers
 - ground support staff
 - other members of baggage handling and ramp teams
 - supervisors, team leaders and managers
 - technical staff
- principles of tug operation as required by relevant licensing authority
- problems that may occur when operating a tug and appropriate action that should be taken in each case
- relevant Australian Standards
- relevant information/documents, including:
 - conditions of service, legislation and industrial agreements, including workplace agreements and awards
 - flight schedules and gate allocations

- induction and training materials
- licence requirements of relevant authorities
- local instructions relevant to aircraft tug operations
- manufacturer specifications and instructions for tug being operated
- pre- and post-operation checklists
- tug logs/records
- tug operational checklists
- workplace instructions and job specification
- relevant local instructions for tug operation
- aircraft push-out tugs, including one or more of the following:
 - aircraft push-back tug
 - aircraft tow motor
 - aircraft tow tractor
 - push back power unit (PPU)
 - tow tug (aircraft)
- aircraft push-out tug, including:
 - diesel engine tugs
 - electric battery-operated tugs.
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders related to ground operations
- relevant WHS and environmental procedures and regulations
- risks that exist when operating a tug and related risk control procedures and precautions
- selection and correct fitment of PPE
- workplace procedures for operating an aircraft push-out tug.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and

operation manuals

- relevant materials, tools, equipment and PPE currently used in industry.

AVIW0020 Refuel aircraft

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to refuel aircraft in compliance with relevant regulatory requirements and national operating standards.

It includes conducting pre-operational checks on fueller/dispenser vehicle and equipment, loading fueller and positioning fueller/dispenser vehicle. It also includes carrying out refuelling operations, completing post-refuelling operations and completing documentation.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to equipment and system operations of ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

W – Equipment and Systems Operations

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.	demonstrate achievement of the element.
1 Conduct pre-operational checks on fueller/dispenser vehicle and equipment	1.1 Personal protective equipment (PPE) is selected and used in accordance with workplace procedures
	1.2 Hazards are identified, risks are assessed and hazard management implemented
	1.3 Pre-operational checks of fueller/dispenser vehicle and auxiliary equipment are conducted
	1.4 Problems or defects identified during pre-operational checks are reported or rectified in accordance with workplace procedures and manufacturer requirements
	1.5 Outcomes of pre-operational checks are reported and recorded
2 Load fueller	2.1 Vehicle is positioned at loading bay and all precautionary and reporting requirements are carried out
	2.2 Vehicle is grounded and loading bay bonding lead is connected to fueller
	2.3 Fueller is dipped and ullage is determined
	2.4 Loading operations and quality control checks are completed
3 Position fueller/dispenser vehicle	3.1 Fueller/dispenser vehicle is moved to aircraft
	3.2 Aircraft is approached following confirmation has been provided that is safe to approach the aircraft in accordance with the aircraft operator's manual suite and workplace procedures
	3.3 Vehicle is positioned either underwing or standoff, depending on aircraft type
	3.4 Appropriate precautions are taken to avoid risk of collision with aircraft control surfaces and engines
	3.5 Fueller/dispenser vehicle is parked in a position that provides easiest route for evacuation in an emergency
4 Carry out refuelling operations	4.1 Vehicle is grounded and bonding lead is connected to aircraft

- 4.2** Pressure refuelling auxiliary equipment is positioned and hose is connected
 - 4.3** Hydrant dispenser delivery hoses and couplings are connected to aircraft and intake hose is connected to inlet coupler
 - 4.4** Aircraft is refuelled to required fuel quantity or tank capacity
- 5 Complete post-refuelling operations**
 - 5.1** Refuelling operations are completed
 - 5.2** Fuel sample is taken from filter sump/inlet and visual check is made prior to aircraft departure
 - 5.3** Hoses, couplings and auxiliary equipment are disconnected and stowed
 - 5.4** Hydrant dispenser lanyard is disconnected, and pit valve dust cover and hydrant pit lid are replaced
 - 5.5** Reel hoses are rewound and stowed
 - 5.6** Fueller/dispenser vehicle is driven either to depot or to next aircraft in accordance with workplace procedures, regulatory requirements and local instructions
- 6 Complete documentation**
 - 6.1** Hard copy documentation and paperwork is completed as required and airline representative's signature is obtained
 - 6.2** Electronic fuel management systems are used to report, record and verify refuel operations

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIW3006 Refuel aircraft.

Assessment Requirements for AVIW0020 Refuel aircraft

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- identifying and correctly using relevant equipment
- identifying hazards, including:
 - contamination of, or from, materials being handled
 - dust
 - fuel vapours
 - hazardous or dangerous materials
 - hot engines, static electricity, sparks and other forms of ignition
 - jet blast
 - noise
 - other additives (such as water, methanol and icing inhibitors)
 - other vehicles on tarmac
 - rotating propellers
 - spill, leakages and ruptures
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying identified problems promptly in accordance with regulatory requirements and workplace procedures and local instructions

- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- differences in refuelling procedures for various types of aircraft
- emergency procedures
- manufacturer instructions for fueller vehicle and auxiliary equipment
- relevant Australian Standards
- relevant information/documents, including:
 - airport airside driver handbook
 - conditions of service, legislation and industrial agreements, including workplace agreements and awards
 - flight schedules
 - relevant International Air Transport Association (IATA) fuel guidelines
 - induction and training materials
 - loading and fuelling operational checklists
 - manufacturer specifications and instructions for fueller/dispenser vehicle and auxiliary equipment
 - workplace instructions and job specification
- relevant legislation and regulations such as the Australian Dangerous Goods (ADG) Code
- people to consult about refuelling operations, including:
 - aircrew
 - airline engineers or representatives
 - ground support staff
 - other refuelling staff
 - supervisors and managers
 - technical staff
- pre-operational checks of refueler, including:
 - air-pressure after start-up
 - auxiliary equipment
 - brake interlock override switch seal
 - brake test
 - fire extinguishers
 - radio check with base

- required documentation
- sampling equipment and water detection capsules
- serviceability of ladder or portable steps
- sufficient fuel levels in fueller for planned refuelling job
- vehicle parked in designated area
- visual inspection for leaks, defects and obstructions
- PPE including:
 - approved uniform
 - gloves
 - hearing protection
 - high visibility clothing
 - mask or respirator
 - safety glasses
 - safety headwear and footwear
- principles and processes of aircraft refuelling
- problems that may occur when refuelling an aircraft and appropriate action that should be taken in each case
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders and other regulations for the refuelling of aircraft
- relevant WHS and environmental procedures and regulations
- risks that exist when refuelling an aircraft and related risk control procedures and precautions
- selection and correct fitting of PPE
- workplace procedures for loading a fueller and refuelling aircraft.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

- relevant materials, tools, equipment and PPE currently used in industry.

AVIW0021 Defuel aircraft

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to defuel aircraft in compliance with relevant regulatory requirements and national operating standards.

It includes conducting pre-operational checks on defueller vehicle and auxiliary equipment, positioning defueller vehicle and conducting quality checks on product. It also includes defuelling aircraft, completing post-defuelling operations and completing documentation.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to equipment and system operations of ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

- | | |
|--|---|
| 1 Conduct pre-operational checks on defueller vehicle and auxiliary equipment | <p>1.1 Personal protective equipment (PPE) is selected and used in accordance with workplace procedures</p> <p>1.2 Hazards are identified, risks are assessed and hazard management implemented</p> <p>1.3 Reason for defuelling and quantity of fuel to be defueled is confirmed</p> <p>1.4 Type of aircraft and requirement for overwing or underwing operation is confirmed</p> <p>1.5 Pre-operational checks on vehicle and auxiliary equipment are made</p> <p>1.6 Ullage in defuelling vehicle or auxillary equipment is checked</p> |
| 2 Position defueller vehicle | <p>2.1 Defuelling vehicle is moved airside or landside to aircraft</p> <p>2.2 Aircraft is approached following confirmation has been provided that is safe to approach the aircraft in accordance with the aircraft operator's manual suite and workplace procedures</p> <p>2.3 Vehicle is positioned either underwing or standoff, depending on aircraft type</p> <p>2.4 Appropriate precautions are taken to avoid risk of collision with aircraft control surfaces, aircraft engines and other vehicles</p> <p>2.5 Defueller vehicle is parked in a position that provides easiest route for evacuation in an emergency</p> |
| 3 Conduct quality checks on product | <p>3.1 Required documentation is obtained from airline engineer/representative</p> <p>3.2 Sample of product on board aircraft is obtained and visual quality checks are made in accordance with workplace procedures</p> <p>3.3 Defuelling operations are initiated in response to satisfactory fuel quality checks</p> |

- 3.4** Defuelling operations are initiated into contingency storage areas for further processing in response to unsatisfactory fuel quality checks
- 4 Defuel aircraft**
 - 4.1** Vehicle is grounded and bonding lead is connected to aircraft
 - 4.2** Defuelling safety precautions are implemented prior to commencement of operations
 - 4.3** Defuelling operations are commenced either using auxiliary power unit (APU) or ground power unit (GPU)
 - 4.4** Quantity defuelled on completion is verified in accordance with workplace procedures
- 5 Complete post-defuelling operations**
 - 5.1** Hoses are disconnected, retracted and stowed
 - 5.2** Fuel confirmed as acceptable for return to storage is discharged into designated segregated storage tank or retained in fueller for ongoing supply operations
 - 5.3** Fuel identified as contaminated is disposed of in accordance with workplace procedures and regulatory requirements
 - 5.4** Fueller used to transfer contaminated fuel is de-contaminated
- 6 Complete documentation**
 - 6.1** Hard copy documentation and paperwork is completed as required and airline representative's signature is obtained
 - 6.2** Electronic fuel management systems are used to report, record and verify refuel operations

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIW3011 Defuel aircraft.

Assessment Requirements for AVIW0021 Defuel aircraft

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- identifying and correctly using relevant equipment
- identifying hazards, including:
 - contamination of, or from, materials being handled
 - dust
 - fuel vapours
 - hazardous or dangerous materials
 - hot engines, static electricity, sparks and other forms of ignition
 - jet blast
 - noise
 - other fuel additives
 - other vehicles on tarmac
 - rotating propellers
 - spill, leakages and ruptures
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities dependent on differing workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communication equipment to required protocol
- reading and interpreting instructions, regulations, procedures and other relevant information
- reporting and/or rectifying any identified problems promptly in accordance with regulatory requirements, workplace procedures and local instructions

- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- differences in defuelling procedures for various types of aircraft
- emergency procedures
- hazard management and the principle of hierarchy of control – with elimination, substitution, isolation and engineering control measures being selected before safe working practices and PPE
- manufacturer instructions for defueller vehicle and auxiliary equipment
- people to consult about defuelling operations, including:
 - aircrew
 - airline engineers or representatives
 - ground support staff
 - other refuelling staff
 - supervisors and managers
 - technical staff
- principles of aircraft defuelling
- pre-operational checks of refueller vehicle, including:
 - auxiliary equipment
 - brake interlock override switch seal
 - brake test
 - PPE
 - radio check with base
 - required documentation
 - sampling equipment and water detection capsules
 - serviceability of ladder or portable steps fire extinguishers
 - sufficient ullage in defueller for planned defuelling operations
 - visual inspection for leaks, defects and obstructions
- problems that may occur when defuelling an aircraft and appropriate action that should be taken in each case
- relevant Australian Standards
- relevant information/documents:
 - conditions of service, legislation and industrial agreements, including workplace

- agreements and awards
- flight schedules
- fuelling operational checklists
- induction and training materials
- local instructions
- manufacturer specifications and instructions for fueller/dispenser vehicle and auxiliary equipment
- relevant International Air Transport Association (IATA) fuel guidelines
- workplace instructions and job specification
- relevant legislation and regulations such as the Australian Dangerous Goods (ADG) Code
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders and other regulations for the defuelling of aircraft
- relevant WHS and environmental procedures and regulations
- risks that exist when defuelling an aircraft and related risk control procedures and precautions
- selection and correct fitting of PPE, including:
 - approved uniform
 - gloves
 - hearing protection
 - high visibility clothing
 - mask or respirator
 - safety glasses
 - safety headwear and footwear
- workplace procedures for defuelling aircraft.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

- relevant materials, tools, equipment and PPE currently used in industry.

AVIW0022 Coordinate aircraft movements and storage

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to coordinate aircraft movements and storage in compliance with relevant regulatory requirements and national operating standards.

It includes regulating aircraft engine ground running, controlling aircraft parking, providing escort services to aircraft, providing ground security to aircraft and monitoring aircraft refuelling.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to equipment and system operations of ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

W – Equipment and Systems Operations

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | |
|--|------------|--|
| 1 Regulate aircraft engine ground running | 1.1 | Appropriate ground engine running locations are selected |
| | 1.2 | Engine ground running is checked in relation to time, duration and level |
| | 1.3 | Ground running activities are reported |
| 2 Control aircraft parking | 2.1 | Compliance with aircraft parking restrictions is checked |
| | 2.2 | Hazards are identified, risks are assessed and hazard management implemented |
| | 2.3 | Aircraft push-backs are monitored |
| | 2.4 | Marshalling services are provided as required |
| | 2.5 | Parking breaches are logged and reported, and appropriate action is taken |
| 3 Provide escort services to aircraft | 3.1 | Need for escort services is appropriately assessed |
| | 3.2 | Appropriate communications are established and maintained |
| | 3.3 | Appropriate safe movement routes are taken |
| 4 Provide ground security to aircraft | 4.1 | Parked aircraft are routinely observed |
| | 4.2 | Suspicious or unusual activity in the vicinity of parked aircraft is investigated, logged and reported |
| 5 Monitor aircraft refuelling | 5.1 | Use of correct procedures and standards in refuelling activities is monitored |
| | 5.2 | Correct disposal of fuel samples is ensured |
| | 5.3 | Breaches are logged and reported |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIW3021 Coordinate aircraft ground operations.

Assessment Requirements for AVIW0022 Coordinate aircraft movements and storage

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- managing and controlling hazardous situations when carrying out work activities
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying identified problems promptly in accordance with regulatory requirements and workplace procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self, others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communications equipment checks
- emergency procedures
- physical characteristics of aircraft
- procedures for operating electronic communications equipment

- purpose and application of unserviceability markers
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders and other regulations for ground operations
- relevant sections of national and state/territory regulatory requirements and codes of practice
- relevant WHS/OHS and environmental procedures and regulations
- requirements for completing relevant documentation
- standard operating procedures for coordinating aircraft ground operations.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIW0023 Implement wildlife hazard control measures

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to implement wildlife hazard control measures in compliance with relevant regulatory requirements and national operating standards.

It includes assessing wildlife hazards and reporting on the effectiveness of wildlife hazard control programs.

This unit addresses aviation non-technical skill requirements (mental, social and personal-management abilities) of ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

W – Equipment and Systems Operations

Unit Sector

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--|--|
| 1 Assess wildlife hazards | 1.1 Bird and animal counts are undertaken |
| | 1.2 Records are kept and analysed |
| | 1.3 Wildlife hazards are reported to relevant notification authorities in accordance with standard operating procedures (SOPs) |
| | 1.4 Procedures for controlling wildlife hazards are reviewed and implemented in accordance with the wildlife hazard management plan |
| | 1.5 Appropriate control measures for identified wildlife hazards are selected and implemented in accordance with relevant legislative and regulatory requirements |
| 2 Report on effectiveness of wildlife hazard control programs | 2.1 Reports on incidents involving birds or animals to aircraft or infrastructure are prepared |
| | 2.2 Recommendations on effectiveness of wildlife hazard control measures and procedures are made to aerodrome management |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIW3023 Implement wildlife hazard control measures.

Assessment Requirements for AVIW0023 Implement wildlife hazard control measures

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- hazard control measures must include one or more of the following:
 - computer
 - cracker shells and live ammunition
 - freezer
 - radio
 - rifles
 - shotguns
 - vehicle
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures, including:
 - environmental protection legislation
 - industrial relations and workplace compensation legislation
 - relevant licensing authority licence requirements
 - local instructions
 - relevant Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders
 - relevant work health and safety (WHS) legislation
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing risk management procedures
- implementing WHS procedures, Civil Aviation Safety Authority (CASA) Manual of Standards (MoS) and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments

- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying identified problems promptly in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- emergency procedures
- procedures for managing and controlling hazardous situations when carrying out work activities
- relevant Australian Standards
- relevant information/documents, including:
 - aerodrome manual
 - forms and databases
 - legislation and guidance material
 - maps
 - national and state/territory regulations, authorising permits and approvals
 - customer contract specifications, standards and instructions
 - manufacturer specifications and instructions for equipment/materials used when implementing wildlife hazard control measures
 - equipment logs/records
 - wildlife hazard management plan
 - workplace procedures and instructions, and job specification
- relevant sections of CASRs, Civil Aviation Orders related to aerodrome wildlife hazard management and environmental protection legislation
- relevant licensing authority licence requirements
- local instructions
- relevant WHS legislation
- relevant sections of national and state/territory regulatory requirements and codes of practice
- relevant WHS, risk assessment, and environmental procedures and regulations
- requirements for completing relevant documentation
- SOPs relating to the wildlife hazard control program

- steps involved in planning work activities.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIW0024 Perform down the wire duties

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to perform wireman duties in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes preparing for recovery or deployment and recovering/deploying equipment and personnel.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to equipment and system operations of flight or ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

W – Equipment and Systems Operations

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

1 Prepare for recovery/deployment

1.1 Personal protective equipment (PPE) is inspected, donned, connected and checked

1.2 Hoisting equipment and/or personnel to be hoisted are prepared, inspected, connected and checked

1.3 Personnel to be hoisted are briefed as required

2 Recover/deploy equipment/personnel

2.1 Hand signals are used as required

2.2 Positive control of equipment and personnel is maintained during ascent and descent

2.3 Assistance for personnel is provided as required in hoisting operations

2.4 Assistance for personnel is provided as required in abnormal/emergency hoisting operation situations

2.5 Disconnection of equipment and personnel is conducted in accordance with organisational policy and procedures

2.6 Cable is earthed prior to completing descent

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIW3024 Perform wireman duties.

Assessment Requirements for AVIW0024 Perform down the wire duties

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- applying aircraft safety procedures when performing wireman duties, including:
 - preparing for flight operations
 - operating around aircraft
 - implementing aviation safety emergency procedures
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing hoisting recovery equipment operations
- completing relevant documentation
- giving and receiving instructions related to performing wireman duties
- identifying and using required communications technology
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- maintaining situational awareness
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in communications equipment
- performing equipment assembly
- performing hoisting operations in at least one of the following environments:
 - bushfire affected areas
 - confined areas
 - forest/bush
 - mountainous areas
 - over land
 - over water

- pinnacles
- ship/boat transfers
- planning own work, predicting consequences and identifying improvements
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and rectifying any identified problems, faults or malfunctions promptly
- using verbal and non-verbal communication skills for signalling and briefing
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- environment for hoisting operations, including:
 - bushfire affected areas
 - confined areas
 - forest/bush
 - mountainous areas
 - over land
 - over water
 - pinnacles
 - ship/boat transfers
- abnormal/emergency situations, including:
 - aircraft malfunction
 - aircraft system failure
 - communications equipment failure
 - electrical/mechanical failure
 - fouled cable
 - fouled hoist
 - hoist equipment malfunction
 - hoistee incapacitation
 - intercom system failure during hoisting operations
 - operator incapacitation
 - runaway hoist
- abnormal/emergency conditions and responses, including:
 - aircraft actions
 - individual actions
- aircraft flight control operation

- aircraft safety procedures, including:
 - preparing for flight operations
 - operating around aircraft
 - implementing aviation safety emergency procedures
- approved operational procedures and processes for different hoisting operations
- communication skills for signalling and briefing
- correct hoist and equipment configuration
- hoist capabilities and limitations
- hoisting equipment, including:
 - double lift harness
 - emergency slings
 - extension strop
 - hi-line transfer equipment
 - rescue litter
 - rescue net
 - rescue strop
 - rope harness sling
 - single rescue sling
 - stretchers
 - transfer equipment and message bag
- preparing hoisting equipment, including:
 - assistance in the donning of personal protective equipment (PPE)
 - securing of items/loads/personnel
- hand signals, including:
 - aircraft go around
 - all clear
 - boom in/out
 - cease movement
 - come up/down
 - emergency descent
 - hoist in/out
 - hoist up/down
 - move left/right
 - ready to be hoisted
 - stop hoisting
- relevant Australian Standards
- relevant information/documentation, including:
 - aeronautical information publication (AIP)
 - approved checklists
 - charts

- conditions of service, legislation and industrial agreements, including workplace agreements and awards
- flight manual/pilot operating handbook (POH)
- induction and training materials
- in a Defence context, relevant Defence Orders and Instructions
- operations manuals
- workplace procedures and instructions, and job specification
- relevant legislation and regulations, including:
 - relevant Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders
 - state/territory environmental protection legislation
 - national and state/territory WHS
- organisational policy and procedures in relation to performing down the wire duties
- personnel safety
- typical problems that may occur when performing down the wire duties, actions and appropriate solutions
- WHS issues applicable to down the wire operations.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIW0025 Complete aircraft and flight equipment pre- and post-flight actions

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to complete aircraft and flight equipment pre- and post-flight actions in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes preparing aircraft and flight equipment, performing aircraft pre- and post-flight actions, and completing post-flight requirements.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to equipment and system operations of flight crew and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

W – Equipment and Systems Operations

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare aircraft and flight equipment

- 1.1 Aircraft fuel levels are confirmed as sufficient to achieve flight requirements
- 1.2 Personal protective equipment (PPE) is inspected and prepared for use
- 1.3 Flight equipment is stowed appropriately in aircraft
- 1.4 Applicable aircraft publications are obtained or accessed

2 Perform aircraft pre- and post-flight actions

- 2.1 Aircraft maintenance documentation is inspected for correct compilation and completion
- 2.2 Information/documentation about serviceability of aircraft, engineering limitations, fuel state and configuration is obtained and assessed for flight or mission capability
- 2.3 Aircraft pre-flight inspections are conducted
- 2.4 Aircraft fluid systems are checked and replenished as approved by flight crew maintenance
- 2.5 Aircraft post-flight inspections are conducted
- 2.6 Aircraft discrepancies and unserviceabilities are reported

3 Complete post-flight requirements

- 3.1 Aircraft publications are stored and updated
- 3.2 Specialist flight equipment is inspected and stored for future use
- 3.3 PPE is inspected and stored in appropriate areas
- 3.4 Identified flight equipment unserviceabilities are reported and recorded in accordance with maintenance recording requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIW3025 Complete aircraft and flight equipment pre- and post-flight actions.

Assessment Requirements for AVIW0025 Complete aircraft and flight equipment pre- and post-flight actions

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and the range of conditions on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant aeronautical knowledge
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and using ground support equipment required for replenishing aircraft systems
- identifying and using required communications technology
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following aircraft documentation
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in communications equipment in accordance with standard operating procedures (SOPs)
- operating specialist equipment
- planning own work, predicting consequences and identifying improvements
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and rectifying identified problems, faults or malfunctions promptly in accordance with workplace procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of

the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- aircraft and aircraft systems configuration and operation
- aircraft and flight equipment inspection procedures and serviceability criteria
- documentation inspection and compilation procedures
- aircraft publications, including:
 - aviation maintenance documentation
 - checklists
 - flight manuals
 - organisational policy and procedures manuals
- pre- and post-flight inspection procedures
- relevant Australian Standards
- aircraft documentation, including:
 - aeronautical information publication (AIP)
 - aircraft flight manual (AFM)
 - approved checklists
 - charts
 - in a Defence context, relevant Defence Orders and Instructions
 - induction and training materials
 - operations manuals
 - pilot operating handbook (POH)
 - relevant sections of Civil Aviation Safety Regulations (CASRs)
- workplace procedures and instructions, and job specification relevant legislation and regulations, including:
 - CASRs and Civil Aviation Orders related to aircraft maintenance
 - state/territory environmental protection
 - national and state/territory WHS
- relevant WHS responsibilities
- specialist equipment inspection procedures
- specialist equipment uses, capabilities and limitations
- typical problems that may occur when completing aircraft and flight equipment pre- and post-flight actions, and appropriate solutions.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate,

assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals,
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIW0026 Conduct night vision imaging system operations

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to conduct night vision imaging system (NVIS) operations in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes preparing for, conducting and concluding NVIS operations as an individual flight crew member.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to equipment and system operations of flight crew/s and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

W – Equipment and Systems Operations

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

1 Prepare for NVIS operations

- 1.1** Pre-flight information is obtained and prepared to identify safe flight routes, weather and operating terrain
- 1.2** Aviation risk management processes are implemented to minimise risk to safety of flight, personnel and equipment
- 1.3** NVIS lighting limitations/considerations are reviewed
- 1.4** Crew briefing is delivered or received about NVIS operational objectives
- 1.5** NVIS equipment is obtained and pre-operational checks are completed in accordance with organisational policies and procedures
- 1.6** Aircraft NVIS sensors, aids and equipment serviceability preparatory and adjustments are completed, and defects are identified and reported in accordance with organisational policies and procedures

2 Conduct NVIS operations

- 2.1** NVIS equipment and personal flight equipment are used to safely operate aircraft systems
- 2.2** Instrumentation and/or NVIS checks are completed at appropriate times to identify visual clues
- 2.3** Night vision human factors are monitored and corrective action taken as required in accordance with organisational policies
- 2.4** Reconnaissance of operational area is completed to ensure aircraft safety in accordance with organisational policies
- 2.5** NVIS emergency and abnormal conditions are identified and reacted to in accordance with organisational procedures and practices
- 2.6** Situational awareness is maintained to ensure safety of flight, crew, personnel and equipment
- 2.7** Individual flight crew coordination and management principles are implemented to ensure operational intent in accordance with organisational policies

3 Conclude NVIS operations

- 3.1** Post-flight analysis and debriefing is conducted in accordance with organisational policies

- 3.2 Post-flight documentation is completed and processed
- 3.3 After-use servicing is completed and identified equipment defects are reported in accordance with organisational policies

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIW3026 Conduct night vision imaging system operations.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIW0026 Conduct night vision imaging system operations

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- applying principles of crew coordination and management relevant to night vision imaging system (NVIS) operations during flight
- applying relevant aeronautical knowledge
- applying relevant legislation and workplace procedures
- applying visual scanning techniques and procedures during NVIS operations
- communicating effectively with others
- conducting or participating in pre-flight, flight and post-flight briefings and debriefings relevant to NVIS operations
- implementing aviation risk management processes, procedures and required actions to minimise, control or eliminate identified hazards
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and calculating luminance/illumination levels for NVIS operations
- interpreting and following operational instructions and prioritising work during NVIS operations
- maintaining or regaining degraded, situational awareness while conducting NVIS operations
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in communications equipment in accordance with organisational procedures
- participating in or delivering stakeholder briefing requirements, including:
 - planning for recovery from inadvertent instrument meteorological conditions (IMC) entry and loss of visual cues
 - transit flight, let-down and approach procedures
 - landing and take-off procedures
 - role functions and procedures
 - contingency management

- post-flight debriefings
- analysing objectives and outcomes of flight and reviews of operating procedures
- analysing effectiveness and efficiency in the use and performance of role equipment
- identifying achievements and faults or errors that occurred during NVIS flight and providing guidance and feedback to other flight crew members
- ensuring inspection, servicing and stowage arrangements for NVIS equipment
- performing blind cockpit or cabin checks during relevant flight operational checks and procedures
- performing or contributing to relevant flight planning procedures
- performing NVIS sensor, equipment or device pre- and post-flight inspections and adjustments to ensure optimisation for use and future operation
- planning navigation and/or operational requirements
- planning own work, predicting consequences and identifying improvements
- reporting and rectifying identified problems, faults or malfunctions promptly in accordance with workplace procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to aircraft, crew, personnel and equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- aeromedical factors under NVIS operations, including:
 - visual performance limitations:
 - field of view (FOV)
 - eye relief distance
 - dynamic visual scan
 - unaided peripheral cueing
 - visual acuity
 - visibility determinants
 - contrast
 - depth perception and related functions
 - dynamic and static visual flight cues
 - NVIS and helmet assembly
 - eye protection
- pre-flight information, including:
 - authorised aviation maps, charts and flight supplements
 - meteorological information
 - NVIS risk assessments and/or management plans

- terrain data
- aviation risk management processes and procedures applicable to NVIS operations
- Civil Aviation Safety Regulation (CASR) Part 61 Manual of Standards (MOS) Aeronautical Knowledge relevant to NVIS operations
- common NVIS equipment faults and defects
- concepts and procedures relating to blind cockpit and cabin checks
- crew coordination within an NVIS operating environment, including:
 - scanning arcs of responsibility
 - NVIS operations terminology
 - degraded situational awareness due limited visibility
- cues and techniques that optimise navigation processes under NVIS conditions
- effect of meteorological conditions on illumination levels and NVIS equipment, sensor and/or device performance
- NVIS sensors, aids and equipment, including:
 - active infra-red (IR)
 - enhanced vision systems
 - forward looking IR radars
 - head-up displays (HUD)
 - laser range gating
 - night vision devices
 - night vision goggles
 - thermal imaging systems
- NVIS sensors, aids and equipment serviceability, including:
 - aircraft internal/external night-aided lighting checks
 - aural and visual warning system checks
 - eyepiece or objective lens cannot be focused
 - eye-span and eye relief cannot be achieved
 - image obscurations
 - inability to focus
 - intermittent operation
 - low battery or power indications
 - night-aided sensors, aids and devices checks
- effects of atmospheric conditions on electromagnetic energy and the resolution of NVIS sensors, equipment and devices
- NVIS sensors fail to initialise/self-test, including:
 - NVIS equipment mounting systems unserviceable
 - non-operation
 - poor or degraded image quality
- emergency and abnormal situation procedures applicable to NVIS-specific operations, including:
 - breakdown in crew coordination and communications

- degraded or loss of situational awareness
- inadvertent instrument meteorological conditions (IMC)
- night-aided aircraft and personal equipment failures
- flight planning considerations, terrain and route selection factors applicable to NVIS operations
- flight rules and NVIS legislation, including:
 - privileges and limitations of an NVIS rating and endorsement
 - requirements for conducting a flight using NVIS
 - requirements for conducting a flight using NVIS below 500 feet above ground level (AGL)
 - minimum aircraft equipment requirements
 - determining if NVIS equipment meets minimum standards to be authorised for use
- focal and ambient vision
- human factors under NVIS conditions, including:
 - fatigue:
 - acute
 - cumulative
 - circadian
 - visual fatigue
 - psychological fatigue
 - physical fatigue
 - sleep quality and sleep debt
 - circadian rhythm:
 - biological rhythm
 - light/dark adaption
 - dark adaptation:
 - foveal cone stimulation
 - time to adapt
 - performance/alertness
 - pre-adapt to reverse cycle operations
 - crew duty limits and flight crew rostering
 - mission/task planning
 - pharmaceutical support
 - flight crew management strategies:
 - sleep environment
 - napping strategies
 - physical fitness
 - coffee and alcohol effects
 - self-imposed restrictions
 - post-flight visual problems:

- transient colour distortion
- eye fatigue
- NVIS operations – hypoxia considerations
- human physiological functions and the electromagnetic spectrum under NVIS conditions
- internal and external organisational regulatory requirements for NVIS operations
- key visual cues for identifying and interpreting terrain features and obstacles under NVIS conditions, including shadow and surface
- meteorological requirements for NVIS operations
- minimum crewing requirements for the conduct of NVIS operations
- NVIS equipment components and their functions
- NVIS field of view, field of regard and how they relate to visual scanning techniques
- NVIS hazards, including:
 - non-trained personnel
 - non-compatible lighting
- NVIS operations crew coordination procedures during pre-flight, flight operations and post-flight activities
- NVIS operations qualification, currency and recency requirements
- NVIS techniques for adapting visually to night conditions
- organisational policies that apply to storage, handling, usage and control of NVIS equipment, sensors, aids and devices
- organisational requirements for NVIS equipment aircraft compatibility
- potential NVIS illusions and misperceptions and their effects on spatial orientation
- procedures and techniques to enhance in-flight navigation during NVIS operations
- relationship between illuminance and luminance
- risk management processes and procedures applicable to NVIS operations
- self-imposed and physiological fatigue issues that impact on NVIS operations
- sources, types and effects of illumination levels in NVIS operations
- terrain interpretation and navigation techniques
- types of aviation NVIS operations
- WHS issues applicable to conducting night-aided aviation operations
- NVIS personal flight equipment, including:
 - eye protection
 - flares, strobes, beacons and IR markers
 - handheld torches
 - IR compatible lighting systems
 - lip and finger lights
 - personal life-support equipment.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training

Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- aircraft, including one or more of the following:
 - fixed or rotary wing aircraft compatible with and authorised to conduct NVIS operations
 - single or multiple engine.

AVIW0027 Deliver pyrotechnics and handheld stores

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to deliver pyrotechnics and handheld stores in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes preparing pyrotechnics or stores for aerial delivery, deploying pyrotechnics or stores, and responding to in-flight pyrotechnic and stores emergencies.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to equipment and system operations of flight crew and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Assessment Requirements for AVIW0027 Deliver pyrotechnics and handheld stores

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- completing relevant documentation
- identifying and using required communications technology
- implementing arming and preparation procedures for pyrotechnics and handheld/air launched stores
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following flight and operational manuals and safety policies
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in communications equipment in accordance with standard operating procedures (SOPs)
- performing serviceability inspection of pyrotechnics and handheld/air launched stores
- planning own work, predicting consequences and identifying improvements
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly in accordance with workplace procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include

knowledge of:

- in a Defence context, relevant Defence Orders and Instructions
- organisational policies and procedures for storing pyrotechnics and handheld/air launched stores
- pyrotechnics or handheld stores, including:
 - chaff
 - expendable mobile anti-submarine warfare training targets (EMATTS)
 - flares
 - heliboxes
 - life rafts
 - marker marines
 - search and rescue (SAR) datum buoys
 - signal underwater sound
 - smoke
 - sonobuoys
- practices for pyrotechnic and handheld/air launched stores delivery
- preparation and arming procedures of pyrotechnics and handheld/air launched stores
- procedures and protocols for using communications systems during an emergency
- relevant emergency procedures and duty of care requirements
- relevant Australian Standards
- relevant legislation and regulations, including:
 - Civil Aviation Safety Regulations (CASR) and Civil Aviation Orders
 - state/territory environmental protection
 - national and state/territory WHS
- relevant WHS responsibilities
- information/documentation, including:
 - aeronautical information publication (AIP)
 - approved checklists
 - charts
 - conditions of service, legislation and industrial agreements, including workplace agreements and awards
 - relevant sections of CASR
 - induction and training materials
 - flight manual/pilot operating handbook (POH)
 - operations manuals
 - workplace procedures and instructions, and job specification
- serviceability inspection procedures for pyrotechnics and handheld/air launched stores
- typical problems that may occur when delivering pyrotechnics and handheld/air launched stores, and appropriate action and solutions
- emergencies, including:

- aircraft emergencies
- aircraft malfunction
- battery malfunctions
- hung sonobuoy
- inadvertent release
- premature discharge
- WHS policies relating to pyrotechnic and handheld/air launched stores delivery.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIW0028 Operate and manage remote pilot aircraft systems

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to operate and manage remote pilot aircraft systems (RPAS) in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes operating and managing RPAS during normal flight, and managing RPAS during abnormal and emergency procedures.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to equipment and system operations of flight or ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew RPAS environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

W – Equipment and Systems Operations

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

1 Operate and manage RPAS during normal flight

- 1.1 RPAS, sub-systems and devices are operated to achieve operational requirements
- 1.2 RPAS, sub-systems and devices are monitored using a systematic scan technique
- 1.3 RPAS and flight environment information is analysed to identify actual and potential threats or errors
- 1.4 RPAS automation is utilised to manage control station workload
- 1.5 Checklist procedures are implemented during normal RPAS operations

2 Manage RPAS during abnormal and emergency procedures

- 2.1 Abnormal or emergency situations are identified, diagnosed and communicated
- 2.2 RPAS control is maintained at all times
- 2.3 RPAS abnormal or emergency checklist procedures are implemented to maintain safety of flight
- 2.4 Course of action is decided, implemented, evaluated and revised to achieve safest outcomes
- 2.5 Location and operation of emergency systems applicable to RPAS are explained

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIW3038 Operate and manage remote pilot aircraft

systems.

Assessment Requirements for AVIW0028 Operate and manage remote pilot aircraft systems

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting remote pilot aircraft systems (RPAS) displays
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- operating electronic communications equipment to required protocol
- performing systematic scan technique for monitoring RPAS, sub-systems (equipment) and devices
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- undertaking fault finding in RPAS
- using automated systems to manage workload
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- aeronautical decision-making processes relevant to RPAS operations
- effective communication
- team briefings

- risk identification, analysis and control in relation to RPAS operations
- emergency plans
- emergency equipment
- emergency manoeuvres to avoid collision
- flight environment information, including:
 - head-up display (HUD) suitable for flight
 - RPAS control systems suitable for flight indications, including height, speed, direction and location
- RPAS as applicable to rating/endorsement requirements in relation to RPAS type if relevant:
 - battery/fuel/power system:
 - likely faults that may affect battery/fuel/power system
 - emergency operating procedures for battery/fuel/power system
 - operation of /battery/fuel/power selector panel or display full battery/fuel capacity and fuel grade
 - electrical system:
 - likely faults that may affect electrical system
 - detection and avoidance systems:
 - surveillance and collision avoidance functions of detection and avoidance systems
 - system limitations
 - automated systems:
 - limitations of automated systems.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIW0029 Manage pre- and post-flight actions

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to manage pre- and post-flight actions in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes completing pre- and post-flight administration, performing pre- and post-flight actions/inspections, and performing and certifying daily inspections.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to equipment and system operations of flight crew and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.	demonstrate achievement of the element.
1 Complete pre- and post-flight administration	1.1 Pre- and post-flight planning and documentation is completed in accordance with regulatory requirements and/or operations manual
	1.2 Aircraft take-off and landing performance is calculated in accordance with performance charts
	1.3 Aircraft weight and balance is confirmed
	1.4 Pre- and post-flight maintenance release (flight technical log) and flight administration is completed in accordance with regulatory requirements and/or operations manual
	1.5 Aircraft serviceability is determined by daily inspection, and certification of daily inspection in maintenance release (flight and technical log) is completed in accordance with regulations
2 Perform pre- and post-flight actions/inspection	2.1 Equipment and documentation, as required by regulation, is identified and secured in aircraft pre-flight
	2.2 Hazards are identified, risks are assessed and hazard management implemented
	2.3 Internal checks are completed in accordance with approved checklist
	2.4 External checks are completed in accordance with approved checklist
	2.5 Flight equipment and documentation are removed from aircraft post-flight
	2.6 Aircraft is secured in accordance with manufacturer specifications and organisational procedures
3 Perform and certify daily inspection	3.1 Daily inspection of aircraft is performed in accordance with authorised aviation maintenance systems
	3.2 Appropriate actions are undertaken to rectify discrepancies
	3.3 Daily inspection is certified in accordance with regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIW4001 Manage pre- and post-flight actions.

Assessment Requirements for AVIW0029 Manage pre- and post-flight actions

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing and applying relevant regulations, orders and information to the performance of the required planning, pre- and post-flight administrative functions
- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying air safety practices and regulations
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant aeronautical knowledge
- calculating aircraft performance for all phases of flight
- calculating fuel requirements
- calculating rotorcraft hover performance (for rotorcraft only)
- calculating take-off and landing performance
- certifying aircraft flight technical log
- communicating effectively with others
- completing internal and external aircraft checks
- completing relevant documentation
- complying with flight authorisations
- conducting maintenance and flight briefings
- determining optimum cruise altitude for operations safety and efficiency requirements
- ensuring all aircraft locking and securing devices, covers and bungs are removed and stowed securely
- entering defects or endorsements to permissible unserviceabilities in aircraft flight technical log
- identifying all relevant radio and navigation aid facilities to be used during flight
- identifying and correctly using relevant equipment
- identifying and securing equipment and documentation required for flight
- identifying minimum equipment applicable to aircraft type
- identifying special aerodrome procedures
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations

- interpreting and following operational instructions and prioritising work
- liaising with qualified maintenance personnel to determine action required in relation to identified defects or damage
- meeting flight crew obligations and restrictions in regard to daily inspections and certification
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- obtaining, interpreting and applying relevant information contained in required pre-flight operational documentation, including:
 - minimum equipment list (MEL)
 - maintenance release
 - weather forecasts
 - local observations
 - Notice to Airmen (NOTAM)
 - global navigation satellite system (GNSS) receiver autonomous integrity monitoring (RAIM) information
 - En Route Supplement Australia (ERSA)
 - aeronautical information package (AIP)
- operating electronic communications equipment to required protocol
- performing input and downloading of data from flight planning systems if applicable
- performing tie-down, covering and securing of aircraft
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions in accordance with workplace procedures
- selecting and using relevant equipment required when managing pre- and post-flight actions
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- aircraft entry and exit procedures
- aircraft maintenance release requirements and procedures for intended flight
- airworthiness requirements applicable to aircraft category and class or type
- checklist use and procedures
- daily inspection procedures, including rectification actions

- flight-specific reports, including incident reporting
- fuel requirements for day visual flight rules (VFR) flight operation
- interpretation of meteorological and NOTAM information
- local aerodrome requirements
- local weather patterns
- minimum equipment list for applicable aircraft type
- purpose and procedures for accessing and using pre-flight briefing and information systems
- pre- and post-flight planning administration procedures, including flight authorisations
- relevant national aeronautical information processing system (NAIPS) and aeronautical information publications
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders
- relevant WHS and environmental procedures and regulations
- safe equipment stowage
- SOPs for category and class or type of aircraft and operator
- take-off and landing performance charts.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIW0030 Manage aircraft sensor systems

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to manage aircraft sensor systems in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes initialising aircraft sensor systems and optimising aircraft sensor performance.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to equipment and system operations of flight crews and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

W – Equipment and Systems Operations

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | |
|---|------------|---|
| 1 Initialise aircraft sensor systems | 1.1 | Equipment is enabled in accordance with manufacturer instructions, and organisational policy and procedures |
| | 1.2 | Equipment functional checks are performed in accordance with manufacturer instructions, and organisational policy and procedures |
| | 1.3 | Hazards are identified, risks are assessed and hazard management implemented |
| | 1.4 | System parameters are initialised for anticipated meteorological and/or oceanographic conditions |
| 2 Optimise aircraft sensor performance | 2.1 | Sensor output is monitored and operational information used to support operational task requirements |
| | 2.2 | Real time environmental conditions are monitored |
| | 2.3 | System parameters are modified to maintain optimal sensor performance |
| | 2.4 | Abnormal or emergency aircraft sensor system situations are handled in accordance with organisational and regulatory requirements |
| | 2.5 | System faults are identified, diagnosed and appropriate responses are undertaken |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIW4028 Manage aircraft sensor systems.

Assessment Requirements for AVIW0030 Manage aircraft sensor systems

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant aeronautical knowledge
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- determining and implementing appropriate counter measures
- giving and receiving instructions related to managing aircraft sensors
- identifying and using required communications technology
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and compiling sensor data
- interpreting and following aircraft documentation
- interpreting and following operational instructions and prioritising work
- maintaining situational awareness
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in communications equipment in accordance with standard operating procedures (SOPs)
- planning own work, predicting consequences and identifying improvements
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- recognising sensor jamming
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- sensor systems, including:
 - airborne surveillance radar
 - acoustics
 - communications systems
 - electro optical systems
 - electronic support measures
 - forward looking infra-red (FLIR)
 - magnetic anomaly detection systems
 - visual observations
- environmental conditions, including:
 - atmospheric conditions
 - currents
 - local weather conditions
 - salinity
 - sea state
 - Southern Oscillation Index (SOI)
 - water depth and temperature
- abnormal/emergency conditions and responses
- communications emission control
- effects of environmental variations on data received from sensors
- magnetic anomaly detection theory
- organisational policy and procedures for managing aircraft sensors
- radar theory
- relevant WHS responsibilities
- sensor capabilities and limitations
- sensor characteristics and operation
- abnormal or emergency aircraft sensor system situations, including:
 - avionics malfunction
 - equipment damage
 - fire on-board
 - instrument failure
 - operator/crew incapacitation
 - sensor system malfunction and/or failure
- sonar theory
- typical problems that may occur when managing aircraft sensor, actions and appropriate solutions.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIW0031 Supervise aircraft refuelling

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to supervise aircraft refuelling in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes preparing for refuelling operations, supervising refuelling operations and managing post-refuelling operations.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to equipment and system operations of flight or ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

W – Equipment and Systems Operations

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

1 Prepare for refuelling operations

- 1.1 Fuel quality control checks are conducted in accordance with workplace procedures
- 1.2 Individual or team personal protective equipment (PPE) is checked for serviceability and functionality
- 1.3 Refuelling brief is conducted
- 1.4 Refuelling equipment is grounded and bonded prior to task
- 1.5 Equipment is inspected in accordance with workplace procedures
- 1.6 Refuelling equipment pre-operational checks are conducted
- 1.7 Hazards are identified, risks are assessed and hazard management implemented

2 Supervise refuelling operations

- 2.1 Clearance to refuel aircraft is obtained
- 2.2 Refuelling staff are directed to commence operations
- 2.3 Safety precautions are implemented and monitored throughout refuelling operations
- 2.4 Refuelling contingencies are communicated to refuelling team and aircraft crew
- 2.5 Incident or emergency actions are managed in accordance with workplace procedures

3 Manage post-refuelling operations

- 3.1 Refurbishment and stowing of equipment is observed
- 3.2 Recording and reporting of equipment unserviceabilities are completed
- 3.3 Post-refuelling operational documentation is completed and processed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIW4034 Supervise aircraft refuelling.

Assessment Requirements for AVIW0031 Supervise aircraft refuelling

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- inspecting equipment, including one or more of the following:
 - radio check
 - serviceability of ground support equipment
 - serviceability of personal protective equipment (PPE)
 - visual inspection of auxiliary equipment
 - visual inspection of documentation
 - visual inspection of fuel availability
 - visual inspection of refuelling equipment
 - visual inspection of safety equipment
- conducting refuelling operations, including one or more of the following:
 - fixed wing aircraft
 - open port refuelling
 - pressure refuelling
 - rotary wing aircraft
- obtaining clearance to refuel from one or more of the following:
 - flight crew
 - ground support staff
 - maintenance personnel
 - supervisors or managers
- responding to refuelling contingencies, including one or more of the following:
 - contamination of, or from, materials being handled
 - dust (static discharge and loss of visibility)
 - fuel vapours
 - hazardous or dangerous materials
 - heat
 - hot engines, static electricity, sparks and other forms of ignition

- hot refuelling
- jet blast or rotor wash
- multiple refuelling tasks
- noise
- other aircraft or vehicles on tarmac
- other fuel additives
- rotating propellers
- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- responding to incident or emergency, including one or more of the following:
 - aircraft accident/incident
 - aircraft or fuel fire
 - aircraft threat
 - damage to refuelling equipment
 - injury of personnel
 - spills, leakages and ruptures
- communicating effectively with others
- completing relevant documentation
- conducting fuel quality control checks in accordance with workplace procedures
- conducting refuelling briefs
- identifying and correctly using relevant equipment
- implementing work health and safety (WHS) procedures and relevant regulations
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- selecting and using required PPE conforming to industry and WHS standards, including:
 - approved clothing
 - gloves
 - hearing protection
 - high visibility clothing
 - mask or respirator
 - safety glasses
 - safety headwear and footwear

- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- manufacturer instructions for equipment used in quality control processes
- problems that may occur when supervising refuelling of aircraft and appropriate action that should be taken in each case
- relevant information/documents, including:
 - airport airside driver handbook
 - conditions of service, legislation and industrial agreements, including workplace agreements and awards
 - emergency procedure guides
 - flight schedules
 - induction and training materials
 - relevant International Air Transport Association (IATA) fuel guidelines
 - loading and fuelling operational checklists
 - manufacturer specifications and instructions for fueller/dispenser vehicle and auxiliary equipment
 - workplace instructions and job specification
- relevant sections of Civil Aviation Safety Regulations (CASR) and Civil Aviation Orders and other regulations for quality control processes carried out when supervising aircraft refuelling
- relevant WHS and environmental procedures and regulations
- risks that exist when supervising refuelling of aircraft and related risk control procedures and precautions
- selection and correct fitment of PPE
- quality control principles and processes for supervising aircraft refuelling operations
- workplace procedures for conducting various quality control operations related to supervising aircraft refuelling.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate,

assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIW0032 Operate and manage aircraft systems

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to operate and manage aircraft systems in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes operating and managing aircraft systems during normal flight, and managing aircraft systems during abnormal and emergency procedures.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to equipment and system operations of flight or ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

1 Operate and manage aircraft systems during normal flight

- 1.1 Aircraft systems, sub-systems (equipment) and devices applicable to aircraft type and task are operated and managed
- 1.2 Aircraft systems, sub-systems (equipment) and devices are monitored using a systematic scan technique
- 1.3 Aircraft systems and flight environment information are analysed to identify actual and potential threats or errors
- 1.4 Automated aircraft systems are utilised to manage cockpit workload
- 1.5 Hazards are identified, risks are assessed and hazard management implemented
- 1.6 Checklist procedures are completed as appropriate to aircraft system

2 Manage aircraft systems during abnormal and emergency procedures

- 2.1 Non-normal or emergency situations are recognised
- 2.2 Control of aircraft flight path is maintained during abnormal and emergency response procedures
- 2.3 Affected aircraft system or sub-system is identified and confirmed
- 2.4 Checklist procedures are recalled and implemented during abnormal and emergency situations using appropriate techniques
- 2.5 Appropriate non-normal or emergency procedures are performed in accordance with relevant workplace and emergency procedures, and regulatory requirements
- 2.6 Course of action is decided, implemented, evaluated and revised to achieve safest outcomes
- 2.7 Location and operation of emergency systems applicable to aircraft type are explained

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIW5018 Operate and manage aircraft systems.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIW0032 Operate and manage aircraft systems

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant aeronautical and aircraft systems knowledge
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting aircraft system displays
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- operating manual and automated aircraft systems
- performing systematic scan technique for monitoring aircraft systems, sub-systems (equipment) and devices
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly in accordance with workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- undertaking fault finding in aircraft systems
- using automated systems to manage workload
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aircraft systems as applicable to aircraft rating/endorsement requirements, including:
 - anti-icing and de-icing systems:
 - method of de-icing aerofoils, propeller and carburettor
 - heat or power source of de-icing/anti-icing equipment
 - anti-icing and de-icing system limitations
 - operation and control of anti-icing and de-icing systems
 - likely faults that may affect anti-icing and de-icing systems
 - emergency operating procedures for anti-icing and de-icing systems
 - aircraft system checklists, including:
 - explanation of normal system operating procedures of aircraft systems, sub-systems and devices used to operate specific aircraft type, including use of published scans and checklists, immediate action items, warnings and limitations
 - automated systems, including:
 - limitations of automated systems
 - operating procedures for systems, such as flight management system, auto throttle/engine control, flight director system, automated aircraft navigation systems, automated engine condition and monitoring system
 - workload management procedures for utilising automated systems
 - warning systems/indicators to identify automated systems failure
 - autopilot, including:
 - principles of operation of autopilot system
 - likely faults that may affect autopilot system
 - emergency operating procedures for autopilot system
 - identification of power sources, voltage or pressure
 - procedure to determine gyros are operating normally
 - procedure to engage autopilot
 - normal and emergency procedure to disengage autopilot
 - limits of gyro units
 - electrical system, including:
 - use of a schematic diagram of the electrical system to explain type/s of electrical system (alternating current (AC)/direct current (DC))
 - likely faults that may affect electrical system
 - emergency operating procedures for electrical system
 - voltage and amperage of battery
 - number and output of generators
 - methods of circuit protection

- location of fuses and circuit breakers
- precautions to be taken when operating electrical service
- instruments operated by electrics
- enhanced ground proximity warning system (EGPWS)/terrain awareness and warning system (TAWS), including:
 - identification and demonstration or explanation of function of all cockpit EGPWS/TAWS controls
 - information terrain awareness display shows
 - warnings given by fitted EGPWS/TAWS, including what each warning indicates is happening to aircraft in flight
- fuel system, including:
 - use of a schematic diagram of fuel system to explain layout and normal operating procedures
 - likely faults that may affect fuel system
 - emergency operating procedures for fuel system
 - operation of fuel selector panel
 - use of cross-feed
 - fuel-dumping procedures
 - full fuel capacity and fuel grade
 - normal, minimum and maximum fuel pressures
- heating, ventilation and pressurisation systems, including:
 - normal procedures to operate and control system
 - likely faults that may affect heating, ventilation and pressurisation system
 - emergency procedures for operation of system
 - precautions to be complied with
- hydraulic system, including:
 - use of a schematic diagram of hydraulic system to explain layout and normal operating procedures
 - likely faults that may affect hydraulic system
 - emergency operating procedures for hydraulic system
 - units or services operated by hydraulics
 - type of hydraulic fluid, operating pressure and capacity of reservoir
- oil system, including:
 - use of a schematic diagram of oil system to explain functions of oil system
 - likely faults that may affect oil system
 - emergency operating procedures for oil system
 - number of tanks, capacity and oil grade
 - oil sources of auxiliary systems, such as constant speed unit (CSU) and propeller feathering, if fitted
 - normal, minimum and maximum oil pressure and temperature
 - operation of oil cooling system

- pitot/static system, including:
 - use of a schematic diagram to explain layout and operation of pitot/static system
 - heating source of pitot system
 - operating procedure for pitot/static system
 - methods of detecting pitot/static system problems
 - procedures to rectify static system problems
 - location of pitot and static pressure source
 - location of static drain points
- pressurisation systems, including:
 - pressurisation failure warning indications fitted to aircraft type flown
 - function of bleed air with respect to an aircraft pressurisation system
 - procedure for manual control of cabin pressurisation applicable to aircraft type flown
 - recall of maximum pressure differential for aircraft type flown
 - symptoms, indications and warnings that may indicate failure of pressurisation system
 - automatic depressurisation system operation procedures after landing
 - physiological symptoms of hypoxia
 - physical and psychological hazards that could occur during a rapid decompression
 - cabin altitude above which supplementary oxygen must be used by crew and passengers
- retractable undercarriage, including:
 - method of preventing retraction of undercarriage on the ground
 - cockpit indications for undercarriage down and locked
 - cockpit indications for undercarriage retracted
 - emergency procedures to extend and lock undercarriage down
- suction system, including:
 - use of a schematic diagram of suction system to explain function of suction system
 - source of suction pressure
 - normal operating pressure
 - instruments operated by suction pressure
 - warning system to indicate suction pump failure
- traffic and collision avoidance systems (TCAS), including:
 - surveillance and collision avoidance functions of TCAS II
 - system limitations, selectivity and inhibits
 - basic components of TCAS II
 - identification and demonstration or explanation of function of cockpit controls
 - TCAS II visual displays and symbology
 - functions of audio alerts and annunciations
 - appropriate crew response to multiple TCAS II events, and parallel runway approach conflicts
 - recall of radiotelephone procedures following a TCAS II alert
 - requirements for a written report of a TCAS II alert and to whom it must be submitted.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIW0033 Coordinate the removal of disabled aircraft

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to coordinate the removal of disabled aircraft in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes coordinating aircraft recovery resources, maintaining operational facilities, and documenting and recording the removal process.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to equipment and system operations of ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

W – Equipment and Systems Operations

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

1 Coordinate aircraft recovery resources

- 1.1 Appropriate clearances are obtained prior to removal process
- 1.2 Established removal procedures are followed
- 1.3 Removal activities are coordinated with aircraft owner and relevant regulatory bodies
- 1.4 Need for recovery equipment is determined and its source is identified
- 1.5 Aircraft escort services on airside are provided as required
- 1.6 Obstacle restriction areas are avoided or made safe in accordance with workplace policy and procedures
- 1.7 Signs and notices are complied with
- 1.8 Hazards are identified, risks are assessed and hazard management implemented
- 1.9 Airport organisations and others likely to be affected by the removal are notified
- 1.10 Appropriate aircraft recovery location is identified and route to that location is established

2 Maintain operational facilities

- 2.1 Serviceability inspections are conducted to determine areas that may be restored to operational service
- 2.2 Infringement of obstacle limitation surfaces (OLS) and any changes to declared distances are determined
- 2.3 Visual aids are provided, installed and removed at completion of aircraft recovery
- 2.4 Emergency response procedures are implemented as required
- 2.5 Notice to Airmen (NOTAM) action is initiated and cancelled as required to support aircraft recovery

3 Document and record removal process

- 3.1 Records of meetings are taken as required
- 3.2 Visual recording of removal process is conducted where access allows

- 3.3 Appropriate logbook entries are made
- 3.4 Incident or aircraft recovery reports are prepared and processed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIW5022 Coordinate the removal of disabled aircraft.

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIW0033 Coordinate the removal of disabled aircraft

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- conducting serviceability inspections, including:
 - displaced threshold markers
 - dumb bell markers
 - glider markers
 - signal circle markers
 - unserviceability cones
 - unserviceability cross markers
 - unserviceability lighting
- applying precautions and required action to minimise, control or eliminate identified hazards
- following emergency response procedures, including one or more of the following:
 - implementing aerodrome emergency procedures
 - reporting to the Australian Transport Safety Bureau (ATSB)
 - reporting to local police service
- applying relevant legislation and workplace procedures
- calculating declared distances defined by regulation
- communicating effectively with others
- completing relevant documentation
- conducting serviceability inspections of aerodrome and obstacle limitation surfaces (OLS)
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action, including one or more of the following:
 - bird or animal activity
 - changes or loss of runway surface frictional characteristics
 - disabled aircraft, vehicles and equipment and associated debris

- excessive loose materials
- flooding
- fuel and oil spills
- loss of runway shape
- loss of visibility of markings
- potholes or cracks
- runway edge fretting
- stripping
- unsatisfactory pavement bearing capacity
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self, others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- aerodrome serviceability standards
- communications equipment checks
- declared distances for aircraft operations
- declared WHS and environmental procedures and regulations
- emergency procedures
- OLS applicable to that aerodrome
- procedures for making movement and obstacle restriction areas safe, including:
 - closing movement area (aerodrome closure)
 - contacting aerodrome users
 - extinguishing lighting in hazardous section of movement area
 - marking unserviceable area by day or night
 - partial closure of movement area
 - reporting aerodrome closures, lighting and obstacle limitations/restrictions by Notice to Airmen (NOTAM)
- procedures for managing and controlling hazardous situations when carrying out work

activities

- procedures for operating electronic communications equipment
- procedures for facilitation of disabled aircraft removal, including:
 - coordination of the removal of the disabled aircraft, including returning the aerodrome to operational serviceability notification of aircraft owner
 - notification of regulatory authorities
- relevant authorities for access and reporting purposes, including:
 - aerodrome operator or delegated person
 - aerodrome users' aircraft owner
 - air traffic control (ATC)
 - Australian Defence Forces Command for military bases
 - ATSB
 - Civil Aviation Safety Authority (CASA)
 - Department of Transport and Regional Services (DOTARS)
 - NOTAM Office (Airservices Australia)
 - state/territory and federal police
- relevant information/documents, including:
 - aerodrome manuals
 - airline timetables
 - en route Supplement Australia (ERSA)
 - induction and training manuals
 - Manual of Standards (MOS) – Aerodromes (Part 139)
 - workplace operating procedures manual
- obstacle restriction areas must include one or more of the following:
 - clearways
 - runway end safety areas
 - runway strips
 - taxiway strips
- visual aids must include one or more of the following:
 - aerodrome lighting
 - markers and markings
 - signal circles
 - wind indicator
- signs and notices must include one or more of the following:
 - authorised entry
 - hazard warnings
 - limited access
 - movement area guidance signs
 - no smoking
 - speed restrictions

- underground electrical reticulation
- relevant requirements, standards and recommended practices of the International Civil Aviation Organisation (ICAO) for airport reporting
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders for inspecting aerodromes
- relevant sections of national and state or territory licensing and regulatory requirements
- requirements for completing relevant documentation
- standard operating procedures (SOPs) for removing disabled aircraft
- steps involved in planning work activities
- types and uses of visual aids
- types of removal equipment available
- typical defects that can occur and related action that should be taken
- visual inspection procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIW0034 Perform non-pilot cockpit duties

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to perform non-pilot cockpit duties in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes monitoring aircraft systems during normal flight and monitoring aircraft systems during abnormal and emergency procedures. It also includes monitoring flight conditions and responding to abnormal and emergency situations.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to equipment and system operations of non-flying pilot (NFP) flight crew and contributes to safe and effective performance in complex operational aviation environments.

Operations are conducted as part of commercial or military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

W – Equipment and Systems Operations

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Monitor aircraft systems during normal flight

- 1.1 Aircraft systems, sub-systems (equipment) and devices are monitored effectively
- 1.2 Aircraft systems, sub-systems (equipment) and devices are monitored using a systematic scan technique
- 1.3 Aircraft systems and flight environment information is analysed to identify actual and potential threats or errors
- 1.4 Hazards are identified, risks assessed and risk management processes implemented
- 1.5 Checklist procedures are completed as appropriate to aircraft system

2 Monitor aircraft systems during abnormal and emergency procedures

- 2.1 Abnormal or emergency situations are recognised
- 2.2 Aircraft flight path is monitored during abnormal and emergency response procedures
- 2.3 Affected aircraft system or sub-system is identified and confirmed
- 2.4 Appropriate abnormal or emergency procedures are identified
- 2.5 Inputs into course of action is provided to achieve safest outcomes
- 2.6 Aircraft emergency systems are monitored continually during abnormal and emergency situations

3 Monitor flight conditions

- 3.1 Instruments are monitored throughout flight for correct indication and operation
- 3.2 Aircraft altitude, attitude and heading are monitored
- 3.3 Situational awareness is maintained to ensure safe flight
- 3.4 Fuel usage is monitored
- 3.5 Aircraft operating limits are monitored and advice provided to pilot in command (PIC)
- 3.6 Operational documentation is interpreted and information provided to PIC
- 3.7 Aircraft operational checks are completed

- 4 Respond to abnormal/emergency situations**
- 4.1** Abnormal/emergency situations are identified and diagnosed
 - 4.2** Abnormal/emergency response is undertaken in accordance with aircraft checklists, pilot directions and organisational policy and procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is not equivalent to AVIY4053 Perform aircrewman cockpit duties.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIW0034 Perform non-pilot cockpit duties

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant aeronautical and aircraft systems knowledge
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- confirming local or area barometric pressure adjusted for sea level (QNH) is set at appropriate stages of flight
- giving and receiving instructions related to performing non-pilot cockpit duties
- identifying and correctly using required equipment and communications technology
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting aircraft system displays
- interpreting and following operational instructions and prioritising work
- maintaining situational awareness
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring the manipulation of aircraft flight controls
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in communications equipment in accordance with SOPs
- operating electronic communications equipment to required protocol
- monitoring manual and automated aircraft systems
- performing fuel usage calculations
- performing systematic scan technique for monitoring aircraft systems, sub-systems (equipment) and devices
- planning own work, predicting consequences and identifying improvements
- reading, interpreting and following relevant regulations, instructions, procedures, information

and signs

- reporting and/or rectifying identified problems, faults or malfunctions promptly in accordance with workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- undertaking fault finding in aircraft systems
- using automated systems to manage workload
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- abnormal/emergency conditions and responses
- aircraft capabilities and limitations
- aircraft flight control operation
- aircraft operational checks
- aircraft operational publication uses and contents
- aircraft systems operation
- basic theory of flight
- basic aeronautical knowledge (BAK)
- organisational policy and procedures in relation to non-flying pilot (NFP) cockpit duties
- relevant WHS/OHS responsibilities
- typical problems that may occur when performing cockpit duties, and possible actions and appropriate solutions
- aircraft systems, likely faults and check lists applicable to type and task, including:
 - anti-icing and de-icing systems
 - electrical systems including
 - fuel system
 - heating, ventilation and pressurisation systems
 - hydraulic system
 - oil systems
 - pitot/static system
 - pressurisation systems
 - retractable undercarriage
 - suction systems
 - traffic and collision avoidance systems (TCAS)
- automated systems and their limitations.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIW5013 Operate air traffic control equipment and workstations

Modification History

Release 2. ISC upgrade - a statement relevant to Defence Aviation has been added to the Application of the unit.

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to operate air traffic control equipment and workstations, in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority and national operating standards.

It includes operating communications, surveillance and ancillary equipment; and using flight progress strips (FPSs) and flight data records (FDRs).

This unit assesses an air controller's ability to interact with a workstation human machine interface (HMI) and to operate the functions of the workstation that are critical to providing safe and efficient air traffic services.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to air traffic control duties that complement the non-technical skills of air traffic controllers, and contribute to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military air traffic services across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Use for Defence Aviation is to be in accordance with relevant Defence Orders, Instructions, Publications and Regulations.

Pre-requisite Unit

Not applicable.

Competency Field

W – Equipment and Systems Operations

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Operate communications equipment

2 Operate surveillance equipment

3 Use flight progress strips or flight data records

4 Operate ancillary equipment

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Air-ground communications channels are operated

1.2 Selective call and priority channels are operated

1.3 Communications equipment is appropriately configured

1.4 Communications malfunctions are recognised, reported and/or rectified

1.5 Communications alarms and warning messages are actioned

2.1 Surveillance system data is interpreted for pertinent operational information

2.2 Surveillance malfunctions are recognised, reported and/or rectified

2.3 Surveillance alarms and warning messages are actioned

3.1 FPSs or FDRs are manipulated to reflect current and future air traffic situation

3.2 FPSs or FDRs are archived in accordance with workplace procedure

3.3 FPSs or FDRs are included in scan pattern and cross-referenced for accuracy

4.1 Ancillary equipment is configured and operated to

tasks

- 4.2 Ancillary equipment data is interpreted for pertinent operational information, and processed as required
- 4.3 Ancillary equipment malfunctions are recognised and reported
- 4.4 Ancillary equipment alarms and warning messages are actioned

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to AVIW5013B Operate air traffic control equipment and workstations.

Links

Companion Volume implementation guides are found in VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIW5013 Operate air traffic control equipment and workstations

Modification History

Release 2. ISC upgrade - a statement relevant to Defence Aviation has been added to the Application of the unit.

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- allocating attention according to priorities
- applying reasoning and decision making when using air traffic control equipment and facilities
- assessing and manipulating message queues
- communicating effectively with others
- completing relevant documentation for using air traffic control equipment and workstations
- configuring ancillary equipment
- configuring operational equipment
- formatting, sending and receiving messages
- identifying and applying precautions and required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and responding to displayed flight information
- monitoring equipment serviceability
- operating the following air traffic control equipment
 - air traffic communications
 - air traffic surveillance
 - ancillary equipment
 - air traffic workstations
- perceiving and comprehending incoming information
- recognising and reporting identified problems in a timely manner
- using conflict recognition tools
- working systematically with required attention to detail.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aeronautical databases
- air situation display
- air traffic control equipment and workstations
- alerts, alarms and warning messages
- allocation of secondary surveillance radar (SSR) codes
- ancillary equipment functions, configurations, data sources and limitations
- communications equipment functions, configurations, data sources and limitations
- communications range and footprints through, and adjacent to, the area of jurisdiction and adjoining frequencies
- configuration, uses and limitations of flight progress strips (FPSs) and flight data records (FDRs)
- degraded modes
- graphic aids
- information recorded using prescribed format
- mandated memory prompts
- maps and charts
- procedures and protocols for operating equipment and workstations
- procedures for facility failures
- relevant sections of regulatory and operational documentation
- requirements for checking and testing equipment including frequencies
- responsibilities for system, equipment and facilities operation
- surveillance equipment and its limitations
- surveillance range and footprints through, and adjacent to, the area of jurisdiction
- systems architecture
- workplace safety requirements for workplace equipment set up and use
- workstation layout and ergonomics.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- acceptable means of simulation assessment.
-

AVIY0011 Conduct maintenance test flight activities

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to conduct maintenance test flight activities, in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority and national operating standards.

It includes reviewing maintenance records and flight test schedules, planning and briefing maintenance test flight sequences, and conducting pre-flight inspections. It also includes conducting engine start and ground checks, performing maintenance test flight sequences, interpreting test flight data, and completing post test flight administration.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to aircraft operational duties of flight crew, and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft maintenance activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Use for Defence Aviation is to be in accordance with relevant Defence Orders, Instructions, Publications and Regulations.

Pre-requisite Unit

Not applicable.

Competency Field

Y – Aircraft Operation and Traffic Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--|---|
| 1 Review maintenance records and test flight schedule | <p>1.1 Maintenance records are reviewed to determine scope of maintenance test flight activities</p> <p>1.2 Maintenance authority briefings are participated in to establish maintenance actions required, components to be test flown and outstanding aircraft unserviceabilities to be reviewed</p> <p>1.3 Test flight schedule requirements are reviewed to determine appropriate maintenance component assessment plan</p> |
| 2 Plan and brief maintenance test flight sequences | <p>2.1 Meteorological conditions are reviewed for suitability to conduct maintenance test flight activities</p> <p>2.2 Flight planning information and flight notifications are advised to appropriate air traffic or support personnel</p> <p>2.3 Aircraft performance is calculated to establish safe and effective flight test operating range of conditions</p> <p>2.4 Planned maintenance test flight sequence is checked against authorised flight test schedules to ensure only necessary components are assessed to determine serviceability</p> <p>2.5 Maintenance test flight sequence is organised based on risk management and time effectiveness principles</p> <p>2.6 Maintenance test flight plan is briefed to all relevant personnel</p> |
| 3 Conduct pre-flight inspection | <p>3.1 Pre-flight operational inspections are conducted to ensure affected aircraft components are prepared for flight test review and assessment</p> <p>3.2 Flight control, engine and system checks that can be functionally performed prior to engine start are checked and/or tested</p> |

- 3.3 Aircraft components assessed as unserviceable during pre-flight inspections are recorded and decision is made to proceed with all, or part of, flight test activity
- 4 Conduct engine start and ground checks**
- 4.1 Engine start sequence is conducted while noting applicable aircraft system cautions, warnings and indication responses in accordance with flight test schedule
- 4.2 Aircraft components assessed as unserviceable during engine start sequences are recorded and decision is made to proceed with all, or part of, flight test activity
- 4.3 Applicable flight control and system checks are performed prior to or immediately on commencement of aircraft taxi
- 5 Perform maintenance test flight sequences**
- 5.1 Aircraft is flown within areas appropriate for conducting maintenance test flight sequences
- 5.2 Maintenance test flight sequences are performed in a manner that minimises risk to crew or potential damage to aircraft and associated systems
- 5.3 Amendments to flight test schedule are made as required that do not compromise the safety of flight and maximise the effective use of available time
- 5.4 Aircraft components assessed as unserviceable during maintenance test flight sequences are recorded and decision is made to proceed with all, or part of, flight test activity
- 5.5 Aircraft flight controls, engines or system components are reviewed and assessed against flight test schedule requirements and decisions are made on individual or system component serviceability
- 5.6 Aircraft is recovered to appropriate landing areas for post-flight inspections
- 5.7 Post flight engine, flight control and system checks are carried out in accordance with flight test schedule
- 5.8 Aircraft components assessed as unserviceable during post-flight inspections are recorded and included in post-flight reports and maintenance documentation
- 6 Interpret test flight data**
- 6.1 Information recorded during flight is analysed to determine individual system serviceability in accordance with appropriate technical and flight manual data

- 6.2 Data is reviewed to determine whether aircraft has passed test flight or requires further test flying of all, or part of, flight test schedule
- 7 Complete post test flight administration**
- 7.1 Aircraft is released back into maintenance authority control
- 7.2 Aircraft components assessed as unserviceable during pre-flight activities, test flight activities and post-flight inspections are recorded in maintenance documentation
- 7.3 Flight test results are communicated to appropriate maintenance authority representative and/or relevant personnel

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AVIY0011 Conduct maintenance test flight activities

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying aviation risk management principles to maintenance test flight activities
- applying relevant aeronautical knowledge
- applying threat and error management principles to maintenance test flight activities
- assisting pilot in command as required with pre- and post-flight inspections including components that have been affected by maintenance activities
- communicating effectively with others
- identifying and justifying a decision to operate an aircraft during test flight activities
- identifying, analysing and rectifying problems associated with operating aircraft during test flight activities
- liaising with crew and/or maintenance personnel during test flight activities
- reacting appropriately to avoid hazardous situations and/or dangerous situations that pose risks to safety of flight and personnel
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reviewing and interpreting flight test schedules, instructions, procedures and relevant information
- setting local or area barometric pressure adjusted for sea level (QNH) at appropriate stages of flight.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- actions to be conducted following a forced landing over or at sea during test flight activities
- applicable checklist items
- application of test flight management and handling techniques:

- normal procedures
- abnormal situation procedures
- emergency procedures
- aviation maintenance documentation:
 - interpreting aircraft servicing and maintenance periods
 - analysing aircraft maintenance history
 - recording flight test results and test data
- crew and/or pilot responsibilities during test flight sequences
- emergency radio procedures
- hazards and risks when conducting maintenance test flight activities and procedures, and precautions for controlling the risks
- local air traffic control procedures and instructions
- problems that may occur when executing advanced helicopter manoeuvres and procedures, and appropriate action that should be taken in each case
- relevant sections of aviation maintenance regulations and orders
- relevant sections of aviation safety regulations and orders
- task and workload management during maintenance test flight activities
- test flight schedules:
 - interpreting flight test requirements
 - determining appropriate flight test sequences.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

- relevant materials, tools, equipment and personal protective equipment currently used in industry.

AVIY0015 Perform an aerobatic sequence

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to perform an aerobatic sequence, in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes designing an aerobatic sequence, and performing aerobatic sequences above a specified safety height.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to aircraft operational duties of flight crew, and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Use for Defence Aviation is to be in accordance with relevant Defence Orders, Instructions, Publications and Regulations.

Pre-requisite Unit

AVIY4061 Perform aerobatic manoeuvres

Competency Field

Y – Aircraft Operation and Traffic Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--|--|
| 1 Design an aerobatic sequence | <p>1.1 Performance parameters are identified based on physical limitations of pilot and structural limitations of aircraft</p> <p>1.2 Sequence of aerobatic manoeuvres is designed that meets a specified requirement</p> <p>1.3 Practical transitions are included between aerobatic manoeuvres</p> <p>1.4 Performance parameters are identified based on a combination of aircraft attitude, power setting, altitude and speed that provide go-no-go guidance for safe completion of all manoeuvres above safety height</p> |
| 2 Perform aerobatic sequences above specified safety height | <p>2.1 Specified sequences of manoeuvres are completed in accordance with aerobatics design</p> <p>2.2 Performance parameters required for safe completion of a manoeuvre are achieved prior to commencement</p> <p>2.3 Orientation with display axis is maintained</p> <p>2.4 Energy potential of aircraft is managed to ensure completion of manoeuvres and sequences of manoeuvres within aircraft structure and minimum height limits</p> <p>2.5 Failure to achieve performance parameters (energy requirement) to complete a manoeuvre is recognised and aircraft is managed to regain control above safety height</p> <p>2.6 Height at or above a specified altitude is maintained</p> |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces but is not equivalent to AVIY4062A Perform an aerobic sequence.

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for AVIY0015 Perform an aerobatic sequence

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria on at least one occasion and include:

- achieving performance parameters required for safe completion of manoeuvres prior to commencement
- adapting to differences in equipment and operating environment in accordance with standard operating procedures
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant aeroplane aeronautical knowledge
- communicating effectively with others
- compensating for meteorological effects on display sequence
- compensating for the secondary effects of controls
- completing relevant documentation
- completing specified sequences of manoeuvres in accordance with aerobatic design
- following relevant legislation and workplace procedures
- identifying and correctly using equipment required to perform aerobatic sequence
- identifying symptoms of loss of control
- implementing contingency plans
- implementing work health and safety (WHS)/occupational health and safety (OHS) procedures and relevant regulations
- maintaining height at or above a specified altitude
- maintaining orientation with display axis
- managing energy potential of aircraft to ensure completion of manoeuvres and sequence of manoeuvres within aircraft structure and minimum height limits
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating aircraft within its limitations, achieving optimum performance
- operating electronic communications equipment to required protocol
- performing aerobatic sequences above a specified safety height:
 - not below 3000 feet (ft) above ground level (AGL) (Flight Activity Endorsement 1)

- not below 1500 ft AGL (Flight Activity Endorsement 2)
- not below 1000 ft AGL (Flight Activity Endorsement 3)
- not below 500 ft AGL (Flight Activity Endorsement 4)
- below 500 ft AGL (Flight Activity Endorsement 5)
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- recognising approaching maximum performance limitations of aircraft
- recognising approaching minimum safe altitude
- recognising failure to achieve performance parameters to complete a manoeuvre, and managing aircraft to regain control above safety height
- recognising situations that may require a precautionary landing or abandonment
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using relevant equipment during aerobatics sequence
- selecting and using required personal protective clothing and equipment conforming to industry and WHS/OHS standards
- setting local or area barometric pressure adjusted for sea level (QNH) at appropriate stages of flight
- using instruments to monitor aircraft performance
- working collaboratively with others
- working systematically with required attention to detail without injury to self, others or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- ‘g’ figure that a normal person may experience ‘g’ induced loss of consciousness (G-LOC)
- ‘g’ limitations for the aircraft being flown
- aerobatic sequence performance parameters
- aerodynamic principles applicable to performing an aerobatic sequence
- aircraft limitations for aircraft flown
- airspeed limitations
- CASR Part 61 Manual of Standards Schedule 3 Aeronautical Knowledge relevant to aeroplane aerobatic sequences
- conditions under which gravity induced loss of consciousness (G-LOC) is likely to occur
- differences between grey out, black out and G-LOC
- effect of aircraft weight on VA and what precautions must be taken
- effect of increased ‘g’ loading on stall speed
- effect of increasing airspeed on stick force

- energy management principles applicable to aerobatic sequences
- engine speed (RPM) limitations for the aircraft flown
- environmental factors impacting on performing an aerobatic sequence
- factors that can reduce G-LOC tolerances
- factors that lead to increased density altitude
- go/no-go performance criteria
- hazards and consequences of performing aerobatics with blocked Eustachian tubes
- how to calculate the rolling 'g' limitation of an aircraft
- human factors applicable to aerobatic flight:
 - physical fitness self-assessment
- in a Defence context, relevant Defence Orders and Instructions
- maximum rate turn criteria
- meaning of the term rolling 'g'
- meaning of the terms positive and negative 'g'
- minimum altitude to perform aerobatic manoeuvres
- minimum height required to recover from a spin in aircraft type being flown
- minimum height requirements to complete nose low (including pull through) to maintain above minimum height within aircraft normal operating parameters
- minimum radius criteria
- Mueller-Beggs emergency spin recovery technique
- physiological effects of positive and negative 'g'
- physiological effects of sustained and rapid changes of 'g' loading
- physiological factors that increase and reduce 'g' tolerance
- potential danger associated with conducting aerobatics at 500 ft AGL over unfamiliar terrain (Flight Activity Endorsement 4 only)
- potential danger associated with conducting aerobatics below 500 ft AGL over unfamiliar terrain (Flight Activity Endorsement 5 only)
- precautions that should be taken with regard to radius of turn when operating at a high-density altitude
- recovery technique to regain physiological and aircraft control from manoeuvre-induced disorientation
- regulatory requirements applicable to performing aerobatic sequences
- relationship between pre-stall buffet and rate of turn or rate of pitch
- relationship between tunnel vision and loss of consciousness
- relationship during rolling manoeuvres between pitch angle required on commencement of a roll and rate of roll
- relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- relevant WHS/OHS and environmental protection procedures and regulations
- rolling 'g' limitations for aircraft being flown
- structural irregularities that indicate an aircraft has been overstressed
- symmetrical positive and negative 'g' limits for aircraft being flown
- time period that disorientation may occur for, after recovery from G-LOC
- unusual attitude recovery techniques

- velocity speeds:
 - manoeuvring speed (VA)
 - velocity never exceed (VNE)
 - normal operating range (VNO.).

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

AVIY0016 Lead formation flight

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to lead formation flights, in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes planning a formation flight, briefing and debriefing formation flight crews, leading a formation, and managing abnormal and emergency situations while leading a formation flight.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to aircraft operational duties of flight crew, and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Use for Defence Aviation is to be in accordance with relevant Defence Orders, Instructions, Publications and Regulations.

Pre-requisite Unit

AVIY4063 Perform close formation flight

Competency Field

Y – Aircraft Operation and Traffic Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Plan a formation flight

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Formation flight tasking requirements are identified

1.2 Crews, briefing venue, timing and aircraft availability are coordinated

1.3 Task is analysed to determine manoeuvres and formations that ensure safe outcome

1.4 Flight route is planned to achieve formation outcomes in the time available and within performance capabilities of the flight

1.5 All air traffic, area limitations and navigation requirements are complied with

1.6 Actions in abnormal or emergency situations involving the formation are planned

2 Brief and debrief formation flight crew

2.1 Ground and flight manoeuvres are briefed and confirmed with formation flight crews

2.2 Timings, route/s, speeds and altitudes to be flown are specified

2.3 Deputy formation leader responsibilities are briefed and confirmed

2.4 Communication procedures, minimum fuel, abnormal and emergency procedures and method of return for landing are briefed and confirmed

2.5 Achievements and any faults or errors that occurred during the formation flight are identified

2.6 Guidance and feedback is provided to other formation members during post-flight debrief

3 Lead a formation

3.1 Lead aircraft is manoeuvred using controlled corrective action to ensure a stable platform for pilots flying in formation stations

- 3.2 Formation is safely manoeuvred anticipating and allowing for formation size, proximity to obstructions, terrain, airspace limitations, weather conditions and air traffic, while ensuring compliance with regulatory requirements
 - 3.3 Formation is directed and controlled using precise standard radio phraseology, hand and other signal procedures
 - 3.4 Formation lost contact procedures are implemented and managed as required
 - 3.5 Formation member flight performances and appropriate reactions to problems are monitored
- 4 Manage abnormal and emergency situations**
- 4.1 Control of aircraft and formation when leading is maintained
 - 4.2 Abnormal or emergency situations affecting formation performance are identified and analysed
 - 4.3 Course/s of action to resolve abnormal or emergency situations are implemented and monitored
 - 4.4 Task workload and flight safety priorities are organised to ensure optimum outcome of the situation

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces but is not equivalent to AVIY4064A Lead an aircraft formation flight.

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for AVIY0016 Lead formation flight

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant aeroplane or helicopter aeronautical knowledge
- communicating effectively with others
- completing relevant documentation
- determining that formation members possess appropriate qualifications and currency
- following relevant legislation and workplace procedures
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS)/occupational health and safety (OHS) procedures and relevant regulations
- maintaining control and formation while leading aircraft
- managing abnormal and/or emergency situations as formation flight leader:
 - lost aircraft and formation rejoin procedures
 - individual aircraft incident or accident
- manoeuvring formation safely by anticipating and allowing for all aspects of formation flying including compliance with regulatory requirements
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring formation aircraft performance
- monitoring formation member flight performances and appropriate reactions to problems
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- recognising environmental conditions that impact on formation performance
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures

- selecting and using required personal protective clothing and equipment conforming to industry and WHS/OHS standards
- setting local or area barometric pressure adjusted for sea level (QNH) at appropriate stages of flight
- working collaboratively with others
- working systematically with required attention to detail without injury to self, others or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- air traffic, area limitations and navigation requirements for formation flight
- CASR Part 61 Manual of Standards Schedule 3 Aeronautical Knowledge relevant to aeroplane or helicopter operations
- deputy formation flight lead responsibilities
- formation briefing and debriefing procedures
- formation flight lead responsibilities
- formation manoeuvre safety limits considering formation size, proximity to obstructions, terrain, airspace limitations, weather conditions, air traffic and regulatory requirements
- in a Defence context, relevant Defence Orders and Instructions
- planning and briefing requirements for formation flight
- post-flight debriefing techniques
- relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- relevant WHS/OHS and environmental protection procedures and regulations
- standard operating procedures for abnormal or emergency situations for formation flight
- verbal and non-verbal formation communication procedures:
 - commence take off roll
 - position changes
 - radio receiver failure
 - radio transmitter failure.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

AVIY0017 Control aircraft in advanced flight manoeuvres

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the application of skills and knowledge required to control aircraft in advanced flight manoeuvres, in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority and national operating standards.

It includes recovering from abnormal aircraft attitudes and recovering from an induced fully developed aircraft spin.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to aircraft operational duties of flight crew, and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Use for Defence Aviation is to be in accordance with relevant Defence Orders, Instructions, Publications and Regulations.

Pre-requisite Unit

AVIY0018 Execute advanced aeroplane manoeuvres and procedures

Competency Field

Y – Aircraft Operation and Traffic Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Recover from abnormal aircraft attitudes

2 Recover from an induced fully developed aircraft spin

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Abnormal aircraft attitude is recognised
- 1.2 Abnormal aircraft attitude recovery procedures are conducted in accordance with the aircraft flight manual (AFM)/pilot's operating handbook (POH)
- 1.3 Aircraft controllability checks are performed as required
- 2.1 Aircraft spin entry is induced
- 2.2 Aircraft fully developed spin is established and recognised
- 2.3 Direction of aircraft rotation is identified
- 2.4 Aircraft spin recovery procedures are performed in accordance with the AFM/POH

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Abnormal aircraft attitudes must include one or more of the following:

- high or low nose attitudes
- power settings
- spiral dive
- unbalanced flight
- varying angles of bank

Spin types must include:

- erect
- inverted

Spin recovery procedures must include:

- as specified in the AFM/POH
- centralised controls
- opposed yaw

Unit Mapping Information

This unit replaces but is not equivalent to AVIY4066A Control aircraft in advanced flight manoeuvres.

Links

Companion Volume implementation guides are found in VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIY0017 Control aircraft in advanced flight manoeuvres

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant aeroplane aeronautical knowledge
- communicating effectively with others
- compensating for the secondary and tertiary effects of controls
- completing relevant documentation
- following relevant legislation and workplace procedures
- identifying and correctly using relevant equipment
- identifying symptoms of fully developed spin and spiral dive
- implementing contingency plans
- implementing work health and safety (WHS)/occupational health and safety (OHS) procedures and relevant regulations
- maintaining lookout using a systematic scan technique
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating aircraft within its limitations, achieving optimum performance
- operating electronic communications equipment to required protocol
- performing pre-manoeuve checks
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using relevant equipment in advanced abnormal aircraft flight situations
- selecting and using required personal protective clothing and equipment conforming to industry and WHS/OHS standards
- setting local or area barometric pressure adjusted for sea level (QNH) at appropriate stages of

flight

- using instruments to monitor aircraft performance
- working collaboratively with others
- working systematically with required attention to detail without injury to self, others or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- aerodynamic principles for entry into and exit from a fully developed spin and spiral dive
- aircraft limitations for type of aircraft flown including environmental factors
- CASR Part 61 Manual of Standards Schedule 3 Aeronautical Knowledge relevant to aeroplane operations
- difference between a spin and a spiral dive
- in a Defence context, relevant Defence Orders and Instructions
- physiological effects applicable to maximum performance flight
- pre-manoeuve checks
- primary, secondary and tertiary effects of controls
- procedures and requirements for aircraft controllability checks
- procedures and requirements for performing pre-manoeuve checks
- regulatory requirements applicable to performing advanced abnormal aircraft flight manoeuvre
- relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- relevant WHS/OHS and environmental protection procedures and regulations
- techniques to initiate and recover from abnormal aircraft attitudes, fully developed spin and spiral dive
- types of abnormal aircraft attitudes.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of

assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

AVIY0023 Launch, control and recover a remotely piloted aircraft

Modification History

Release 1. This is the first release of this unit of competency in the Aviation Training Package.

Application

This unit involves the skills and knowledge required to launch, control and recover a remote pilot aircraft system (RPAS) in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes conducting pre-launch procedures, maintaining straight and level flight, turning, controlling speed, and landing and recovering.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to aircraft operational duties of flight crew and ground personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew RPAS environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

Y – Aircraft Operation and Traffic Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

- outcomes. demonstrate achievement of the element.
- 1 Carry out pre-launch procedures**
 - 1.1 Pre-launch briefing is conducted
 - 1.2 Fail-safe checks are undertaken in accordance with relevant operations manual
 - 1.3 Air traffic control (ATC) clearances are obtained as required
 - 1.4 Approved pre-launch checklists are completed in accordance with relevant operations manual
 - 1.5 RPAS is correctly positioned for launch
 - 1.6 Airspace is determined as clear for launch
 - 2 Launch RPAS**
 - 2.1 Launch power is applied and RPAS is maintained, aligned in the launch direction
 - 2.2 RPAS is configured for nominated climb profile as required
 - 2.3 Situational awareness, lookout and air traffic separation is maintained
 - 2.4 Listening watch is maintained in accordance with regulatory requirements
 - 2.5 Communication with others as appropriate is undertaken when launching an RPAS
 - 2.6 After launch checks are performed in accordance with operational requirements
 - 2.7 Situational awareness, lookout and air traffic separation are maintained in all phases of RPAS operation in accordance with regulatory requirements
 - 3 Respond to launch emergencies**
 - 3.1 Abnormal RPAS operations are identified
 - 3.2 Control is maintained to bring RPAS to a safe recovery
 - 3.3 Associated emergency procedures are initiated, and checklists and other documentation are completed
 - 4 Climb RPAS**
 - 4.1 Flight path is observed and risks mitigated in accordance with operational procedures

- | | | |
|----------|---|---|
| | 4.2 | RPAS climb checks are completed in accordance with operational procedures |
| | 4.3 | Adjustments are made to attitude and power to achieve safe flight |
| 5 | Maintain straight and level flight | |
| | 5.1 | Power, altitude and configuration are set to achieve straight and level flight as required |
| | 5.2 | Indications of height change are identified and responded to appropriately |
| | 5.3 | Indications of heading change are identified and responded to appropriately |
| | 5.4 | Flight path is observed and risks mitigated in accordance with operational procedures |
| 6 | Turn RPAS in flight | |
| | 6.1 | RPAS operating limits are maintained during turns in accordance with manufacturer instructions |
| | 6.3 | Potential hazards are identified and controlled during turns |
| 7 | Control RPAS speed in flight | |
| | 7.1 | Height awareness is maintained during high speed flight |
| | 7.2 | Recovery to cruise speed is achieved while maintaining height during flight |
| 8 | Descend RPAS | |
| | 8.1 | Adjustments are made to altitude and power to achieve descent rates as required |
| | 8.2 | RPAS is levelled from a descent position at a nominated altitude for operational requirements |
| | 8.3 | Flight path is observed during RPAS descent and risks mitigated in accordance with operational procedures |
| | 8.4 | RPAS operating limits are controlled during descent in accordance with manufacturer instructions |
| | 8.5 | Descent checks are completed in accordance with operational and regulatory requirements |
| 9 | Perform RPAS landing procedure | |
| | 9.1 | Landings are conducted in accordance with operations manual procedures appropriate to the RPAS type, with allowance for wind velocity |

- 9.2 All mandated checklists are completed
- 9.3 Traffic conflict is monitored to ensure safe landing
- 9.4 RPAS is configured for landing in accordance with manufacturer instructions

10 Recover RPAS

- 10.1 RPAS is recovered at a controlled rate of descent
- 10.2 Directional control is maintained at all times
- 10.3 Bouncing of RPAS is minimised appropriately
- 10.4 RPAS is stopped within the available area
- 10.5 Post-recovery checks are performed in accordance with approved checklist, manufacturer instructions and operational requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is not equivalent to AVIY3074 Launch remote pilot aircraft systems.

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIY0023 Launch, control and recover a remotely piloted aircraft

Modification History

Release 1. This is the first release of this unit of competency in the Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying launch procedures in accordance with flight manual
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation
- applying the techniques of straight and level, climbing and descending flight
- carrying out correct procedures in a go-around/position hold
- checking and monitoring fail-safe functions
- communicating effectively with others when controlling the remote pilot aircraft systems (RPAS) in normal flight, including using a radio
- communicating effectively with others when recovering RPAS
- complying with air traffic instructions and regulatory requirements
- exercising sound judgment when performing recovery procedures
- identifying and correctly using relevant equipment
- identifying obstructions or other hazards that might hinder a safe launch
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- interpreting wind speed and direction
- maintaining compliance with regulatory requirements
- maintaining separation between air traffic
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- monitoring radio as a listening watch
- operating electronic communication equipment to required protocol
- performing various functions simultaneously as required
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- remaining within a designated area while complying with air traffic requirements

- reporting and/or rectifying any identified problems promptly in accordance with regulatory requirements and workplace procedures
- responding appropriately to cultural differences
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- using instruments and displays to monitor RPAS performance
- working collaboratively with others when operating the RPAS
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aeronautical decision-making processes
- air traffic requirements
- all pre-launch and after-launch checks
- effective communication
- error management, including error types, causes and consequences
- factors affecting directional control of RPAS
- fatigue risk management
- functions and effects of all RPAS controls
- human performance and its limitations, including the senses, memory and situational awareness
- in a Defence context, relevant Defence Orders and Instructions
- launch emergency procedures
- manufacturer specifications for operating a RPAS
- obstacle clearance techniques
- principles of RPAS aerodynamics
- problems that may occur when launching an RPAS and appropriate actions that should be taken in each case
- purpose and functions of RPAS
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders
- relevant WHS and environmental procedures and regulations
- required documentation
- RPAS launch performance
- stress, workload and time pressure management.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIY0024 Operate remote pilot airship

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to operate and manage remote pilot airships in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes operating and managing the airship during normal flight and during abnormal and emergency procedures.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to equipment and system operations of flight or ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single- pilot or multi-crew remote pilot airship environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

W – Equipment and Systems Operations

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

1 Operate and manage remote pilot airship during normal flight

- 1.1 Airship is prepared for flight according to organisation and manufacturer procedures
- 1.2 Airship is released from mooring under the control of the remote pilot in preparation for flight
- 1.3 Airship weight and balanced is assessed and adjusted as required for flight
- 1.4 Remote pilot airship sub-systems and devices are operated to achieve operational requirements
- 1.5 Remote pilot airship, sub-systems and devices are monitored using a systematic scan technique
- 1.6 Remote pilot airship and flight environment information is analysed to identify actual and potential threats or errors
- 1.7 Airship hull is managed for pressure and the effects of temperature and environment
- 1.8 Remote pilot airship automation is utilised to manage control station workload
- 1.9 Checklist procedures are implemented during normal Remote pilot airship operations

2 Manage remote pilot airship during abnormal and emergency procedures

- 2.1 Abnormal or emergency situations are identified, diagnosed and communicated
- 2.2 Remote pilot airship control is maintained at all times
- 2.3 Remote pilot airship abnormal or emergency checklist procedures are implemented to maintain safety of flight
- 2.4 Course of action is decided, implemented, evaluated and revised to achieve safest outcomes
- 2.5 Location and operation of emergency systems applicable to remote pilot airship are explained
- 2.6 Airship is tethered at the end of flight according to organisational procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

No equivalent unit

Assessment Requirements for AVIY0024 Operate remote pilot airship

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- interpreting remote pilot airship system displays
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- performing systematic scan technique for monitoring remote pilot airship, sub-systems (equipment) and devices
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly in accordance with workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- undertaking fault finding in remote pilot airship
- using automated systems to manage workload
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- aeronautical decision-making processes relevant to remote pilot airship operations
- effective communication
- error management, including error types, causes and consequences
- airship release and tethering procedures
- risk identification, analysis and control in relation to remote pilot airship operations
- weather conditions and impact on operation of remote pilot airship
- flight environment information, including:
 - head-up display (HUD) suitable for flight
 - remote pilot airship control systems suitable for flight indications, including height, speed, direction and location
- remote pilot airship as applicable to rating/endorsement requirements in relation to remote pilot airship type if relevant
- battery/fuel/power system, including:
 - likely faults that may affect battery/fuel/power system
 - emergency operating procedures for battery/fuel/power system
 - operation of /battery/fuel/power selector panel or display
 - full battery/fuel capacity
- hull envelope:
 - likely faults that may affect the airship hull
 - emergency operating procedures for airship hull failure
- electrical system, including:
 - likely faults that may affect electrical system
- detection and avoidance systems, including:
 - surveillance and collision avoidance functions of detection and avoidance systems
 - system limitations
- automated systems, including:
 - limitations of automated systems
- remote pilot airship checklists, including:
 - explanation of the normal system operating procedures of remote pilot airship, sub-systems and devices used to operate specific remote pilot airship, including use of published scans and checklists, immediate action items, warnings and limitations.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIY0025 Operate powerlift and tilt rotor remote pilot aircraft systems

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to operate powerlift and tilt rotor remote pilot aircraft systems (RPAS) in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes climbing an aircraft, maintaining straight and level flight, descending an aircraft and turning an aircraft. It also includes controlling an aircraft at any speed, performing circuits and approaches, and complying with airspace requirements.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to aircraft operational duties of flight crew and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

AVIW0028 Operate and manage remote pilot aircraft systems

Competency Field

Y – Aircraft Operation and Traffic Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Launch aircraft in hover mode

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Adjustments are made to attitude and power to achieve an increase of altitude at normal, maximum rate (V_y), maximum angle (V_x) and cruise climb flight configurations from straight and level flight

1.2 Appropriate altimeter settings are set

1.3 Aircraft is maintained in balanced flight during adjustments to attitude and power

1.4 Power is maintained as altitude increases

1.5 Aircraft is converted from power lift to tilt-rotor mode and levelled off from climb at nominated altitude

1.6 Lookout is maintained during climb using a systematic scan technique at a rate determined by traffic density, visibility and terrain

1.7 Situational awareness is maintained at all phases flight

2 Maintain straight and level flight

2.1 Attitude and power are adjusted to achieve a constant height, heading and speed while remaining in balanced flight

2.2 Lookout is maintained using a systematic scan technique at a rate determined by traffic density, visibility or terrain

2.3 Natural horizon is used as primary attitude reference

2.4 Altitude is maintained within allocated height band

3 Descend aircraft

3.1 Attitude and power are adjusted to enter and maintain a descent from straight and level flight

3.2 Aircraft is levelled from a descent at a nominated altitude

3.3 Lookout is maintained using a systematic scan technique at a rate determined by traffic density, visibility or terrain

3.4 Clearance ahead and below is maintained

3.5 Air traffic control (ATC) altitude restrictions are observed

- 3.6 Design limits are not exceeded during aircraft descent
- 3.7 Appropriate altimeter settings are set
- 3.8 Situation awareness is maintained during aircraft descent
- 4 Turn aircraft**
 - 4.1 Attitude and power are adjusted to enter and maintain turns at varying rates from level, climbing and descending flight to achieve nominated tracks
 - 4.2 Aircraft is rolled out from the turn to achieve nominated heading or geographical feature alignment
 - 4.3 Aircraft balanced flight is ensured as required
 - 4.4 Lookout is maintained in direction of turn and above or below using a systematic scan technique at a rate determined by traffic density, visibility and terrain
 - 4.5 Engine operating limits are not exceeded
- 5 Control aircraft at any speed**
 - 5.1 Attitude and power are adjusted, accelerated or decelerated to manoeuvre aircraft at any specified airspeed within the flight envelope while maintaining balanced flight
 - 5.2 Height awareness is constantly maintained and appropriate adjustments made as required
 - 5.3 Wind conditions are monitored and appropriate allowance made
 - 5.4 Aircraft is suitably controlled to ensure it is operated within its design limits
- 6 Perform circuits and approaches**
 - 6.1 Circuits are joined and conducted in accordance with aeronautical information publication (AIP) and/or local procedures at normal and low altitude appropriate to the aircraft type
 - 6.2 Due allowance is made for wind and all appropriate checklist items are completed when performing circuits and approaches
 - 6.3 Radiotelephone procedures are followed during circuit operations
 - 6.4 Approach path applicable to aircraft type is intercepted and maintained while remaining clear of other traffic

- 6.5 Lookout is maintained during circuits and approaches using a systematic scan technique at a rate determined by traffic density, visibility and terrain
 - 6.6 Conflicting traffic is recognised and appropriate responses made
 - 6.7 Right of way rules are applied and compliance with these rules is maintained
 - 6.8 Weather conditions are monitored and appropriate responses made
 - 6.9 Fuel/power status is monitored and appropriate responses made
 - 6.10 Aircraft approach is conducted to establish hover or to conduct a landing at the nominated termination point
- 7 Comply with airspace requirements**
- 7.1 Suitable aeronautical charts are interpreted and used to maintain airspace compliance requirements
 - 7.2 Circuit departure is performed
 - 7.3 Aircraft is maintained within a specified area and/or track while complying with air traffic requirements, controlled or restricted airspace conditions or limitations and reacting to factors that affect the safe progress of a flight
 - 7.4 Orientation is maintained to geographical features with the aid of suitable charts and maps
 - 7.5 Circuit join is performed
- 8 Land in hover mode**
- 8.1 Aircraft is adjusted appropriately using correct throttle on approach
 - 8.2 Aircraft is converted from tilt rotor to power lift mode and landing sequence is initiated
 - 8.3 Hover is maintained using micro adjustments to maintain position
 - 8.4 Readiness to land is determined and completed in a safe manner

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AVIY0025 Operate powerlift and tilt rotor remote pilot aircraft systems

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant aircraft aeronautical knowledge
- applying relevant legislation and workplace procedures
- communicating effectively with others when controlling aircraft in normal flight
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritise work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying identified problems promptly in accordance with regulatory requirements and workplace procedures
- selecting and using relevant controls, including throttle, rotor controls, anti-torque pedals and collective and cyclic pitch controls
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- setting local or area barometric pressure adjusted for sea level (QNH) at appropriate stages of flight
- solving problems associated with controlling an aircraft in normal flight
- turning an aircraft with the following parameters:
 - level turns

- climbing turns with 20° bank angle
- powered descending turn with 30° bank angle
- using instruments to monitor aircraft performance
- working collaboratively with others when controlling aircraft in normal flight
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- application of a height/velocity diagram/graph
- application of heading and track
- Civil Aviation Safety Regulation (CASR) Part 101 Manual of Standards (MOS) Aeronautical Knowledge relevant to remote pilot aircraft operations
- cause and effects of retreating blade stall
- circuit patterns and procedures
- circumstances and procedures for the use of carburettor heat
- conditions leading to loss of tail rotor/anti-torque control during descent
- dangers of wind shear, turbulence and wake turbulence
- effect of turning and acceleration on magnetic compass accuracy
- forces and moments acting on an aircraft and precautions to manage their effects
- functions, and primary and secondary effects of all aircraft controls
- hazards and risks when controlling an aircraft in normal flight and precautions for controlling the risks, including:
 - in a climb
 - in a turn
 - in straight and level flight
- aircraft instruments and monitoring aircraft performance
- managing non-normal and emergencies in the circuit area
- principles of aerodynamics
- problems that may occur when controlling an aircraft in normal flight and appropriate action that should be taken in each case
- procedures for setting power in normally aspirated, turbocharger, supercharged or turbine engines
- recognition and avoidance of settling with power/vortex ring state
- relevant sections of CASRs and Civil Aviation Orders
- relevant WHS and environmental procedures and regulations
- rotational and induced airflow
- theory and application of best rate and angle of climb
- use of instruments to monitor aircraft performance and significance of colour coding
- vortex ring state

- wind shear, turbulence and wake turbulence.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIY0026 Conduct aerial application operations using remote pilot aircraft systems

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the application of skills and knowledge required to conduct aerial application operations using remote pilot aircraft systems (RPAS) in compliance with the relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes conducting pre-flight operations, performing operational area evaluations, conducting an aerial survey, applying substances through aerial application, and conducting global navigation satellite system (GNSS) swath guidance equipment operations.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to aircraft operational duties of flight crew and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed in small teams or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable

Competency Field

Y – Aircraft Operation and Traffic Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Conduct pre-flight actions

- 1.1 Own fitness for flight and planned operations is self-assessed
- 1.2 Operational aircraft type is determined for suitability for type of aerial application operation
- 1.3 Aircraft and role equipment are checked and assessed for serviceability prior to commencing flight operations
- 1.4 Required applicable maintenance documentation is compiled and checked for accuracy and completeness
- 1.5 Role equipment calibration is checked and adjusted as required
- 1.6 Planned aerial application operations are assessed for potential or actual hazards
- 1.7 Fuel/power requirements are determined and established within aerial application management plans
- 1.8 Logistical considerations are addressed within scope of application management plan

2 Conduct planning and risk management

- 2.1 Suitability of current and forecast weather is determined
- 2.2 Application management plan is developed and used as the basis for aerial application operations
- 2.3 Potential and actual hazards and operational requirements are identified, risks to aerial application operations are assessed and appropriate risk controls are implemented in accordance with the application management plan
- 2.4 Treatment area map is correctly interpreted
- 2.5 Pilot decision on the safety of the proposed application, including refusing to undertake an application where the risks are considered to be too high, is made as required
- 2.6 Appropriate selection of application pattern and

direction of treatment is made taking into consideration safety, efficiency, hazards and terrain

2.7 Acceptable aircraft performance for aerial application operational conditions is confirmed through performance planning

2.8 Normal and abnormal operational communications and signals are confirmed

3 Perform operational area evaluation

3.1 Operational landing areas are assessed for condition, approach/landing direction, hazard identification and meteorological conditions

3.2 Issues relating to aircraft weight, performance, dimensions, load and meteorological conditions are identified and managed

3.3 Landing areas suitable for conducting aerial application operations are selected

3.4 Aircraft pre-landing/launch checks are performed in accordance with operational procedures

3.5 Appropriate landing and launch techniques are conducted during aerial application operations

3.6 Aerial application operations are performed in accordance with published regulations requirements

3.7 Appropriate aerial survey plans are developed for conducting safe aerial application operations

3.8 Operating area boundaries are established and environmentally sensitive areas are identified, including areas that are noise sensitive, biologically susceptible, populated and urban, and restricted or dangerous

3.9 Potential emergency or alternate landing areas are identified and/or established for contingency operations

3.10 Environmental hazard factors affecting aerial application operations are considered

3.11 Wind velocity and direction are assessed for effect on operations

3.12 Application management plans are amended or modified based on aerial survey assessment results as required

- 3.13 GNSS familiarity is applied to the appropriate level of operational requirement
- 3.14 Sound judgement is applied during application treatment area pattern selection
- 3.15 Aircraft is operated at maximum permissible weights for aerial application operations in accordance with manufacturer and regulatory requirements
- 3.16 Aircraft launch weight is determined within requirements relevant to operating conditions
- 4 **Operate within the vicinity of power lines**
 - 4.1 Power lines within and outside the treatment area during an aerial survey are identified
 - 4.2 Power line infrastructure cues are interpreted to aid wire run identification
 - 4.3 Wire heights are accurately assessed to support safe operations in vicinity of power lines, including safe flying parallel to wires
 - 4.4 Other hazards relevant to operations near power lines, such as pole stays, crop height, fences or machinery that may pose a risk, are identified and managed
 - 4.5 Safe command decision whether to fly over or under a wire is made
 - 4.6 Aerial application operations over wires, including adequate safety buffers for pull-up and let down and accurate cut-off and on-off application equipment, are conducted
 - 4.7 Aerial application operations under wires, including assessment of safe clearance distances, are conducted
 - 4.8 Application approaches towards power lines when passage beneath is unachievable are terminated safely
 - 4.9 Human factors that may affect operations near power lines, particularly distraction, short-term memory limitations and inattention (perceptual) blindness are applied during aerial application operations
- 5 **Apply substances through aerial application**
 - 5.1 Substances are applied safely in accordance with the application management plan

- 5.2 Correct application height relevant to terrain, application type and meteorological conditions is established and maintained
- 5.3 Appropriate airspeed and flight profile are controlled on entry or re-entry to operational areas
- 5.4 Aerial application equipment is operated within scope of the application management plan
- 5.5 Hazard areas are manoeuvred around with adequate safety margins during application operations
- 5.6 Application flow rates, pressure and product quantities are monitored during application operations
- 5.7 Decisions to suspend or continue safe aerial application operations are made based on planned or actual operating conditions
- 5.8 Clean-up operations and hazard safety checks are conducted on completion of aerial application

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AVIY0026 Conduct aerial application operations using remote pilot aircraft systems

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant aeronautical knowledge
- implementing work health and safety (WHS) procedures and relevant regulations
- assessing and checking aircraft and equipment for flight serviceability
- assessing identified environmental hazard factors
- assessing own fitness for flight and planned operations
- assessing relevant wind velocity and direction
- compiling applicable maintenance documentation
- conducting pre-flight operational planning
- determining aircraft launch weights relevant to operational conditions
- determining landing area suitability for normal and contingency operations
- determining relevant aircraft type suitability
- developing, amending and modifying application management plans
- establishing and implementing safe operating condition margins during aerial application operations
- establishing operational energy and power requirements for normal and contingency operations
- identifying aerial application hazards
- identifying logistical considerations for application management plan, including:
 - ground support requirements
 - personal supplies and life support
- identifying potential contingency and alternate landing areas
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aerial application human factors, including:

- heat stress and dehydration
- in-flight distractions
- maintaining situational awareness
- mental and physical fatigue
- planning and risk management associate with aerial applications
- application area evaluation, including:
 - meteorological conditions
 - regulations and requirements with aerial applications
 - environmental hazard factors
- aerial application role equipment
- aircraft configuration and flight characteristics for the aircraft being flown during maximum weight flight and operations
- aircraft flight manual, performance, engine and systems
- applicable regulations that relate to conducting a safe aerial application operation
- aviation risk and fatigue risk management processes
- factors to be considered when determining payload weights for aerial application
- global navigation satellite system (GNSS) equipment and operator procedures
- low-level flight safety hazards and risks
- meteorological factors affecting aircraft flight performance during low-level flight
- relevant aerodynamics and aircraft performance
- terrain following techniques.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIY0027 Operate multi-rotor remote pilot aircraft systems

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to operate multi-rotor remote pilot aircraft systems (RPAS) in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes operating and managing multi-rotor RPAS during normal flight and during abnormal and emergency procedures.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to equipment and system operations of flight or ground operations personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew RPAS environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

Y – Aircraft operation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

1 Operate and manage multi-rotor RPAS during normal flight

- 1.1 RPAS, sub-systems and devices are operated to achieve operational requirements
- 1.2 RPAS, sub-systems and devices are monitored using a systematic scan technique
- 1.3 RPAS and flight environment information is analysed to identify actual and potential threats or errors
- 1.4 Aircraft and systems inspection is completed prior to flight
- 1.5 Launch, landing and emergency hover zones are established
- 1.6 RPAS automation is utilised to manage control station workload
- 1.7 Checklist procedures are implemented during normal RPAS operations

2 Manage multi-rotor RPAS during abnormal and emergency procedures

- 2.1 Abnormal or emergency situations are identified, diagnosed and communicated
- 2.2 RPAS control is maintained at all times
- 2.3 RPAS abnormal or emergency checklist procedures are implemented to maintain safety of flight
- 2.4 Course of action is decided, implemented, evaluated and revised to achieve safest outcomes
- 2.5 Location and operation of emergency systems applicable to RPAS are explained

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work

environment.

Assessment Requirements for AVIY0027 Operate multi-rotor remote pilot aircraft systems

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting remote pilot aircraft systems (RPAS) displays
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- operating electronic communications equipment to required protocol
- performing systematic scan technique for monitoring multi-rotor RPAS, sub-systems (equipment) and devices
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- undertaking fault finding in multi-rotor RPAS
- using automated systems to manage workload
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- aeronautical decision-making processes relevant to multi-rotor RPAS operations
- effective communication
- risk identification, analysis and control in relation to multi-rotor RPAS operations

- flight environment information, including:
 - head-up display (HUD) suitable for flight
 - multi-rotor RPAS control systems suitable for flight indications, including height, speed, direction and location
- RPAS as applicable to rating/endorsement requirements in relation to multi-rotor RPAS type if relevant
- risk identification, analysis and control in relation to multi-rotor RPAS operations
- autorotation principles
- gyroscopic principles
- RPAS components, including location and function of electrical parts
- aerodynamics – multirotor lift and drag, hovering and forward flight
- aerodynamics – abnormal operations
- principles of operation – flight controls
- RPAS as applicable to rating/endorsement requirements in relation to multi-rotor RPAS type if relevant
- battery/fuel/power system, including:
 - likely faults that may affect battery/fuel/power system
 - emergency operating procedures for battery/fuel/power system
 - operation of battery/fuel/power selector panel or display full battery/fuel capacity and fuel grade
- electrical system, including:
 - likely faults that may affect electrical system
- detection and avoidance systems, including:
 - surveillance and collision avoidance functions of detection and avoidance systems
 - system limitations
 - ‘return to home’ failsafe function
 - control link corruption the loss of command and control link procedures in accordance with the RPAS operator’s documented practices and procedures
 - safe forced landing and collision avoidance
- automated systems, including:
 - limitations of automated systems.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace

conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIY0029 Operate rotary wing remote pilot aircraft systems

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to operate rotary wing remote pilot aircraft systems (RPAS) in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes climbing an aircraft, maintaining straight and level flight, descending an aircraft and turning an aircraft. It also includes controlling an aircraft at any speed, performing circuits and approaches, and complying with airspace requirements.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to aircraft operational duties of flight crew and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

AVIW0028 Operate and manage remote pilot aircraft systems.

Competency Field

Y – Aircraft Operation and Traffic Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Climb aircraft

- 1.1** Adjustments are made to attitude and power to achieve an increase of altitude at normal, maximum rate (V_y), maximum angle (V_x) and cruise climb flight configurations from straight and level flight
- 1.2** Appropriate altimeter settings are set
- 1.3** Aircraft is maintained in balanced flight during adjustments to attitude and power
- 1.4** Power is maintained as altitude increases
- 1.5** Aircraft is levelled off from climb at nominated altitude
- 1.6** Lookout is maintained during climb using a systematic scan technique at a rate determined by traffic density, visibility and terrain
- 1.7** Situational awareness is maintained

2 Maintain straight and level flight

- 2.1** Attitude and power are adjusted to achieve a constant height, heading and speed while remaining in balanced flight
- 2.2** Lookout is maintained using a systematic scan technique at a rate determined by traffic density, visibility or terrain
- 2.3** Natural horizon is used as primary attitude reference
- 2.4** Altitude is maintained within allocated height band

3 Descend aircraft

- 3.1** Attitude and power are adjusted to enter and maintain a descent from straight and level flight
- 3.2** Aircraft is levelled from a descent at a nominated altitude
- 3.3** Lookout is maintained using a systematic scan technique at a rate determined by traffic density, visibility or terrain
- 3.4** Clearance ahead and below is maintained
- 3.5** Air traffic control (ATC) altitude restrictions are observed
- 3.6** Design limits are not exceeded during aircraft descent
- 3.7** Appropriate altimeter settings are set
- 3.8** Situation awareness is maintained always during aircraft

- descent
- 4 Turn aircraft**
- 4.1** Attitude and power are adjusted to enter and maintain turns at varying rates from level, climbing and descending flight to achieve nominated tracks
- 4.2** Aircraft is rolled out from the turn to achieve nominated heading or geographical feature alignment
- 4.3** Aircraft balance is ensured as required
- 4.4** Lookout is maintained in direction of turn and above or below using a systematic scan technique at a rate determined by traffic density, visibility and terrain
- 4.5** Engine operating limits are not exceeded
- 5 Control aircraft at any speed**
- 5.1** Attitude and power are adjusted, accelerated or decelerated to manoeuvre aircraft at any specified airspeed within the flight envelope while maintaining balanced flight
- 5.2** Height awareness is constantly maintained and appropriate adjustments made as required
- 5.3** Wind conditions are monitored and appropriate allowance made
- 5.4** Aircraft is suitably controlled to ensure it is operated within its design limits
- 6 Perform circuits and approaches**
- 6.1** Circuits are joined and conducted in accordance with aeronautical information publication (AIP) and/or local procedures at normal and low altitude appropriate to the aircraft type
- 6.2** Due allowance is made for wind and all appropriate checklist items are completed when performing circuits and approaches
- 6.3** Radiotelephone procedures are followed during circuit operations
- 6.4** Approach path applicable to aircraft type is intercepted and maintained while remaining clear of other traffic
- 6.5** Lookout is maintained during circuits and approaches using a systematic scan technique at a rate determined by traffic density, visibility and terrain
- 6.6** Conflicting traffic is recognised and appropriate responses

- made
- 6.7 Right of way rules are applied and compliance with these rules is maintained
 - 6.8 Weather conditions are monitored and appropriate responses made
 - 6.9 Fuel/power status is monitored and appropriate responses made
 - 6.10 Aircraft approach is conducted to establish hover or to conduct a landing at the nominated termination point
- 7 Comply with airspace requirements**
- 7.1 Suitable aeronautical charts are interpreted and used to maintain airspace compliance requirements
 - 7.2 Circuit departure is performed
 - 7.3 Aircraft is maintained within a specified area and/or track while complying with air traffic requirements, controlled or restricted airspace conditions or limitations and reacting to factors that affect the safe progress of a flight
 - 7.4 Orientation is maintained to geographical features with the aid of suitable charts and maps
 - 7.5 Circuit join is performed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AVIY0029 Operate rotary wing remote pilot aircraft systems

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant aircraft aeronautical knowledge
- applying relevant legislation and workplace procedures
- communicating effectively with others when controlling aircraft in normal flight
- completing relevant documentation
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritise work
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying identified problems promptly in accordance with regulatory requirements and workplace procedures
- selecting and using relevant controls, including throttle, rotor controls, anti-torque pedals and collective and cyclic pitch controls
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- setting local or area barometric pressure adjusted for sea level (QNH) at appropriate stages of flight
- solving problems associated with controlling an aircraft in normal flight
- turning an aircraft with the following parameters:
 - level turns
 - climbing turns with 20° bank angle

- powered descending turn with 30° bank angle
- using instruments to monitor aircraft performance
- working collaboratively with others when controlling aircraft in normal flight
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- application of a height/velocity diagram/graph
- application of heading and track
- Civil Aviation Safety Regulation (CASR) Part 101 Manual of Standards (MOS) aeronautical knowledge relevant to remote pilot aircraft operations
- cause and effects of retreating blade stall
- circuit patterns and procedures
- circumstances and procedures for the use of carburettor heat
- conditions leading to loss of tail rotor/anti-torque control during descent
- dangers of wind shear, turbulence and wake turbulence
- effect of turning and acceleration on magnetic compass accuracy
- forces and moments acting on an aircraft and precautions to manage their effects
- functions, and primary and secondary effects of all aircraft controls
- hazards and risks when controlling an aircraft in normal flight and precautions for controlling the risks, including:
 - in a climb
 - in a turn
 - in straight and level flight
- aircraft instruments and monitoring aircraft performance
- managing non-normal and emergencies in the circuit area
- principles of aerodynamics
- problems that may occur when controlling an aircraft in normal flight and appropriate action that should be taken in each case
- procedures for setting power in normally aspirated, turbocharger, supercharged or turbine engines
- recognition and avoidance of settling with power/vortex ring state
- relevant sections of CASRs and Civil Aviation Orders
- relevant WHS and environmental procedures and regulations
- rotational and induced airflow
- theory and application of best rate and angle of climb
- use of instruments to monitor aircraft performance and significance of colour coding
- vortex ring state
- wind shear, turbulence and wake turbulence.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIY0030 Operate fixed wing remote pilot aircraft systems

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to operate fixed wing remote pilot aircraft systems (RPAS) in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes climbing an aircraft, maintaining straight and level flight, descending an aircraft and turning an aircraft. It also includes controlling an aircraft at slow speed, performing circuits and approaches, and complying with airspace requirements.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to aircraft operational duties of flight crew and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

AVIW0028 Operate and manage remote pilot aircraft systems.

Competency Field

Y – Aircraft Operation and Traffic Management.

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Climb aircraft

- 1.1** Adjustments are made to attitude and power to achieve an increase of altitude at normal, maximum rate (V_y), maximum angle (V_x) and cruise conditions of flight during straight and turning manoeuvres
- 1.2** Aircraft is maintained in balanced flight
- 1.3** Aircraft is levelled off from climb at nominated altitude using standard aircraft procedures
- 1.4** Flightpath clearance is ensured
- 1.5** Climb checks are completed

2 Maintain straight and level flight

- 2.1** Power, attitude and configuration are set to achieve straight and level flight
- 2.2** Aircraft is maintained in balanced flight
- 2.3** Altitude and heading are maintained within tolerances
- 2.4** Flightpath clearance is ensured

3 Descend aircraft

- 3.1** Power, attitude and configuration are set to achieve descent during glide, power assisted flight and approach profiles
- 3.2** Aircraft is maintained in balanced flight
- 3.3** Aircraft is levelled from a descent at a nominated altitude
- 3.4** Flightpath clearance is ensured
- 3.5** RPAS altitude restrictions are observed
- 3.6** Aircraft operating limits are not exceeded during descent
- 3.7** Effects of undercarriage and flaps are managed
- 3.8** Descent checks are completed

4 Turn aircraft

- 4.1** Airspace cleared procedure is carried out
- 4.2** Heading is altered in balanced flight during level, climbing, descending and gliding manoeuvres and turns are performed at varying rates to achieve specified tracks
- 4.3** Turn on to nominated heading or geographical feature is

- achieved
- 4.4** Aircraft operating limits are maintained during turns
- 5 Control aircraft at slow speed**
- 5.1** Pre-manoeuve checks are completed in accordance with operating procedures
- 5.2** Aircraft is flown at minimum clean approach speed and at minimum landing configuration approach speed as specified in operations manual/pilot's operating handbook (POH) in balanced flight
- 5.3** Height awareness is maintained during slow speed flight
- 5.4** Positive control responses are implemented and reduced control effectiveness recognised during slow flight manoeuvres
- 5.5** Stall warnings, cautions and indications are monitored during slow speed flight
- 5.6** Recovery to cruise speed is achieved while maintaining height
- 6 Perform circuits and approaches**
- 6.1** Traffic patterns are conducted in accordance with aeronautical information package (AIP) procedures appropriate to the aircraft type with allowance for wind velocity on all legs of the circuit
- 6.2** All checklists are completed and radiotelephone procedures followed
- 6.3** Approach path is appropriately intercepted and maintained in a manner applicable to aircraft type while remaining clear of other traffic
- 6.4** Traffic conflict or adverse flight conditions are recognised when they arise and a go-around is performed from any position in the traffic pattern
- 6.5** Right of way rules are applied and complied with
- 6.6** Radio listening watch is maintained in accordance with established procedures
- 6.7** Aircraft is configured for landing
- 7 Comply with airspace**
- 7.1** While aircraft is maintained within a specified area, compliance is maintained with air traffic requirements and restricted, controlled and other appropriately designated

requirements

airspace

- 7.2 Appropriate reactions are made to factors that may affect the safe progress of the flight
- 7.3 Awareness of aircraft position is maintained using charts and geographical features
- 7.4 Radio listening watch is maintained in accordance with established procedures
- 7.5 Weather conditions are monitored and appropriate action taken
- 7.6 Local and published noise abatement requirements and curfews are observed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AVIY0030 Operate fixed wing remote pilot aircraft systems

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- adhering to restricted, controlled and other appropriately designated airspace requirements
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant aircraft aeronautical knowledge
- applying relevant legislation and workplace procedures
- applying the techniques of straight and level, climbing and descending flight to achieve a consistent traffic pattern and approach to landing
- communicating effectively with others when controlling an aircraft in normal flight, including using an aeronautical radio
- compensating for the secondary effects of controls
- completing relevant documentation
- confirming area of operation serviceability and availability
- controlling an aircraft during slow speed flight
- controlling an aircraft during turning manoeuvres
- determining appropriate runway and circuit procedures
- identifying and correctly using relevant equipment
- identifying geographical features from charts, including:
 - landing areas within local area
 - geographical limits
 - geographical limits of flight training areas
 - restricted, controlled and uncontrolled airspace areas
 - state/territory local airspace limits
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- maintaining compliance with regulatory requirements
- maintaining separation between aircraft
- modifying activities depending on workplace contingencies, situations and environments

- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- operating safely in the area of operations and landing areas
- performing circuits and approaches
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- remaining within a designated area while complying with airspace and air traffic requirements
- reporting and/or rectifying identified problems promptly in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- setting local or area barometric pressure adjusted for sea level (QNH) at appropriate stages of flight
- using instruments to monitor aircraft performance
- working collaboratively with others when controlling an aircraft in normal flight, including using an aeronautical radio
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- after launch checks
- aircraft performance
- aircraft systems
- aircraft weight and balance
- airspace cleared procedure to be carried out before all turns
- Civil Aviation Safety Regulation (CASR) Part 101 Manual of Standards (MOS) Aeronautical Knowledge relevant to remote pilot aircraft operations
- cause of and compensation for aileron drag
- circuit patterns and procedures
- contents of the operations manual and pilot's operating handbook (POH)
- dangers associated with mechanical and wake turbulence
- dangers of turbulence and wake turbulence when flying at low speed
- day visual flight rules (VFR) criteria
- effect of angle of bank and load factor on stall speeds
- effect of turning and acceleration on magnetic compass accuracy
- effects and use of carburettor heat or de-icing systems
- effects of carburettor or intake icing
- effects of excessive cooling on engine performance

- effects of flap
- engine considerations during prolonged climbing and descending
- environmental conditions that represent visual meteorological conditions (VMC)
- functions and effects of all aircraft controls
- go-around procedures from base leg and final approach
- hazards during maximum rate descent
- hazards when performing performance manoeuvres
- local area operating procedures
- operation of stall warning devices fitted to aircraft
- pre-landing checks
- primary effects of controls
- principles of aerodynamics
- procedures for setting power in normally aspirated, turbocharged or supercharged engines
- relationship between angle of bank, load factor and stall speed
- relationship between induced drag and operating at slow speed
- relationship of attitude and power to balanced flight
- relevant sections of aeronautical information package (AIP)
- relevant sections of CASRs and Civil Aviation Orders
- relevant WHS and environmental procedures and regulations
- requirements and procedures for maximum rate descent
- tendency to under bank in descending turn and over bank in a climbing turn
- theory and application of best rate and angle of climb
- turning using a magnetic compass
- use of autopilot/flight director functions
- use of flap
- use of instruments to monitor aircraft performance.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations

- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIY0031 Apply the principles of air law to remote pilot aircraft systems operations

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to apply the principles of air law to remote pilot aircraft systems (RPAS) operations in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes compiling aviation documentation, applying remote pilot licensing requirements, and applying flight rules and conditions of flight to RPAS operations. It also includes applying air service operations legislative requirements, aerodrome and airspace knowledge, and aviation emergency and search and rescue (SAR) knowledge to RPAS operations.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to aircraft operational duties of remote pilots and contributes to safe and effective performance in complex operational environments.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

Y – Aircraft Operation and Traffic Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Compile aviation documentation	<p>1.1 Flight time recording requirements are accurately transcribed and compiled within authorised flight documents</p> <p>1.2 Aviation legislation, aeronautical information and general operating rules are confirmed and applied to aviation operations</p> <p>1.3 Maintenance release requirements and documentation are compiled.</p>
2 Apply flight crew licensing knowledge	<p>2.1 Knowledge of remote pilot licence limitations and privileges is applied</p>
3 Apply flight rules and conditions of flight	<p>3.1 Rules of the air are applied to SPAS operations</p> <p>3.2 Visual flight rules (VFR) and visual meteorology conditions are applied to RPAS operations.</p> <p>3.3 System lighting configuration and operating requirements are followed</p> <p>3.4 Minimum operating heights for flights over populated and other areas are applied</p> <p>3.5 Flight operating limitations over public gatherings are complied with</p> <p>3.6 Flight operating requirements for take-off and landing during daylight hours are applied</p>
4 Apply operations legislative requirements	<p>4.1 Dangerous goods and miscellaneous payload requirements are applied</p> <p>4.2 Legislative responsibilities and requirements of the remote pilot in command (PIC) are identified</p> <p>4.3 Legislative requirements of remote pilot before and after flight duties are applied</p>
5 Apply aerodrome and airspace knowledge	<p>5.1 Aerodrome movement areas, landing areas, helicopter landing site (HLS) and markings are identified</p> <p>5.2 Aerodrome operating procedures are applied to circuit operations</p>

- 5.3 Classes of controlled and uncontrolled airspace are complied with
 - 5.4 Prohibited, restricted and danger (PRD) area flight operating conditions are applied
 - 5.5 Flight information and air traffic service area boundaries and limitations are identified and applied to aviation operations
 - 5.6 Appropriate reference heights are calculated and applied to aviation operations
- 6 Apply aviation knowledge**
- 6.1 Radio equipment listening watch requirements are applied
 - 6.2 Emergency incident and accident definitions and reporting requirements are outlined
 - 6.3 Flight incident and accident notification responsibilities of the PIC are identified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

No equivalent unit.

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIY0031 Apply the principles of air law to remote pilot aircraft systems operations

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying air service operations legislative requirements
- applying aviation knowledge to remote pilot aircraft systems (RPAS) operations
- applying remote pilot licensing requirements
- applying flight rules and conditions of flight to RPAS operations
- applying relevant aeronautical knowledge
- compiling legislated aviation documentation
- extracting information from relevant civil air law, aviation regulations, policies and procedures
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- application of civil air law, aviation regulations, policies and procedures applicable to RPAS operations
- Civil Aviation Safety Regulation (CASR) Part 101 Manual of Standards (MOS) relevant to RPAS operations
- relevant sections of CASRs and Civil Aviation Orders pertaining to civil air law, regulations, policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIY0032 Apply RPAS payload and configuration management principles

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to manage unmanned aerial vehicle (UAV) performance and load in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes applying mass and balance control to flight planning, identifying constraints affecting load planning and planning an aircraft load. It also includes applying principles of aircraft balance and longitudinal stability to load planning, identifying aircraft structural limitations, and identifying aircraft mass and performance planning safety factors. It also includes determining aircraft mass and speed limitations, calculating launch requirements, calculating climb performance, calculating landing requirements, and determining aircraft buffet boundaries and speeds.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to route planning and navigation duties of flight dispatch personnel and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial or military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision as a single operator or within a team environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

H – Route Planning and Navigation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Apply mass and balance control to flight planning

1.1 Components of mass, balance and control are considered and applied in flight planning activities

1.2 Mass and control limitations are included in flight planning calculations

1.3 Required fuel and payload quantities, including minimum fuel reserves, maximum allowable payloads and fuel quantity limitations, are considered when calculating mass and balance

1.4 Calculated aircraft mass centre of gravity (CG) is within aircraft limits and is established for take-off, cruise and fuel economy calculation purposes

1.5 Ground handling of baggage and cargo is minimised through load distribution and loading sequence planning

1.6 Mass and CG is derived and calculated using basic data methods and is applied to flight planning calculations

1.7 Comprehensive load sheet is compiled that includes all required flight performance and load planning data

2 Identify constraints affecting load planning

2.1 Configuration of payload, mass and control limitations are considered

2.2 Aircraft, route, fuel required, and performance limitation planning factors are assessed for potential constraints to load planning activities

2.3 Hazards are identified, risks assessed, and hazard management implemented

2.4 Operator advance index tables and potential impact of mass and fuel minima during seasonal change are identified and considered

2.5 Unusual conditions when advanced allotment tables may be exceeded, the operational impacts and associated contingency planning factors are considered

2.6 Load planning constraints and limitations are prioritised

- based on operational and regulatory requirements
- 3 Plan an aircraft load**
- 3.1** Aircraft design and mass, launch, landing and zero-fuel weights (ZFW) are reviewed and applied to load planning activities
- 3.2** Operational load planning factors affecting a restriction on mass, operational (phase of flight), environmental, equipment, airspace and area of operations are considered and applied as required to aircraft load planning
- 3.3** Aircraft operating mass and passengers mass limits are summarised within load planning documentation
- 3.4** Mass of minimum fuel based on ZFW, quantity, fuel type and specific gravity (including fuel quantity conversions) are reviewed and applied to load planning calculations
- 3.5** Available payload based on specific conditions affecting a flight, including maximum take-off weight (MTOW), regulated take-off weight (RTOW), minimum fuel and taxi fuel requirements, are determined
- 3.6** Manual load sheet, including payload location and last-minute changes, is prepared
- 3.7** Load sheet, including payload location and last-minute changes, is interpreted and automated
- 4 Apply principles of aircraft balance and longitudinal stability to load planning**
- 4.1** Load planning factors, including balance, CG (variations), balance on the ground, principles of lift and centre of pressure, mean aerodynamic chord (MAC) and functions of stabilisers, are identified and considered when calculating aircraft performance and load
- 4.2** Aircraft point of balance is calculated using aircraft data and aircraft balance principles, and is applied to load planning calculations
- 5 Identify aircraft structural limitations**
- 5.1** Satisfactory aircraft balance calculations are achieved ensuring aircraft is safely loaded, structural integrity has not been exceeded and load is capable of being satisfactorily restrained
- 5.2** Fuselage structural limits over, forward and aft of the wing, and mass limitations for associated loading zones are considered and applied to load planning activities

- 5.3** Maximum allowable package sizes are determined using aircraft tables
- 5.4** Methods of restraint and the effect on passengers and crew, damage and CG, including principles of inertia and forces applied to load, are considered and applied to load planning activities
- 5.5** Advantages and limitations of certified and non-certified cargo loads and containers, and methods of load security are considered when calculating aircraft load limitations
- 6 Identify aircraft mass and performance planning safety factors**
- 6.1** Aircraft certification considerations, including structural strength, loads, speed limitations, operating environment, performance capability, landing area lengths and terrain, are considered and applied to aircraft mass and performance calculations
- 6.2** Aircraft certification standards, including categories, state/territory-based variations, operating mass or CG never exceeding limits, and aircraft flight manual restrictions are considered and applied to aircraft mass and performance calculations
- 6.3** Environmental considerations, including certified aircraft operating envelope, pressurisation capabilities, system limitations and aircraft flight manual envelope charts, are considered and applied to aircraft performance calculations
- 7 Determine aircraft mass and speed limitations**
- 7.1** Positive and negative load factor limitations, including normal and ultimate (structural), speed limitations and differing express terms of speed, are considered and applied to aircraft performance calculations
- 7.2** Boundaries of aircraft operating envelope for a specific mass are determined using flight strength diagrams, illustrating effect of wind gusts, margins of speed limits, and turbulence penetration considerations
- 8 Calculate take-off requirements**
- 8.1** Take-off requirements are determined considering clearways and stop-ways requirements and alternatives to balanced field length methods
- 8.2** Critical engine failure speeds, flap positions and reduced thrust take-off stopping distance at critical engine failure speeds is calculated
- 9 Calculate climb**
- 9.1** Take-off flight path; climb segments, including terrain

performance		and obstacle avoidance; and the effects of mass, altitude and temperature; are determined
	9.2	En route considerations affecting climb performance, such as take-off mass, en route alternate selection and terrain, are considered and applied to aircraft performance calculations
	9.3	Approach and landing requirement planning factors, including terrain and obstacle avoidance, and effects of mass, altitude and temperature, are considered and applied to aircraft performance calculations
10 Calculate landing area requirements	10.1	Landing distance requirements are determined, including effect of aircraft configuration, available stopping distance, and effects of marginal conditions
	10.2	Landing distance based on varying environmental conditions, effect of obstacles and braking systems is calculated
11 Determine aircraft buffet boundary and speeds	11.1	Aircraft buffet characteristics, and the effect of variations of a given mass and speed are identified and applied to aircraft performance calculations
	11.2	Permissible buffet for a range of aircraft speeds for combinations of mass and altitude, including safe operating margins, is calculated

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AVIY0032 Apply RPAS payload and configuration management principles

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying basic principles of mass and performance limitations
- applying fuel, payload and load considerations while respecting regulatory and company-approved requirements
- applying knowledge of low and high-speed aircraft buffet characteristics and determining speeds at which aircraft buffet is encountered
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant aeronautical knowledge
- calculating aircraft centre of gravity (CG) arithmetically and graphically using practical methods of and within acceptable ranges
- calculating balance mass required given unequal lengths of arm of beam balance and mass of one pan
- calculating CG of fully loaded aircraft with variable passenger and cargo configurations
- calculating moments about aircraft in flight
- calculating point of suspension given unequal mass in the pans of a beam balance and total length of beam
- communicating effectively with others
- completing relevant documentation
- determining maximum permissible take-off and landing mass under variable operating conditions
- determining permissible mass, altitude and temperature limit data using aircraft operating flight manual in varying conditions
- determining take-off and landing area length and speeds using aircraft operations and flight manual in varying configurations and conditions
- developing an International Air Transport Association (IATA) loadsheet based on mass, balance and control components
- establishing and applying aircraft climb performance limitations
- identifying aircraft mass and performance planning safety factors
- identifying and correctly using equipment required to manage aircraft performance and load

- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- preparing and planning manual and automated load sheets based on all known operational constraints and considerations
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults and malfunctions promptly in accordance with workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- using aircraft flight manual charts and graphs to determine buffet boundaries and safe operating conditions
- using aircraft operating environment envelope chart effectively
- using operator advanced allotment tables to determine typical values for various routes, aircraft and operational needs
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aircraft design mass, including:
 - maximum taxi mass
 - maximum take-off mass
 - maximum landing mass
 - maximum zero-fuel mass
- aircraft mass, balance and control definitions, including:
 - basic operating mass (BOW)
 - dry operating mass (DOW)
 - zero-fuel mass (ZFW)
- critical engine failure speed V1 characteristics, including:
 - mass
 - landing area slope
 - landing braking coefficient
 - pressure altitude
 - temperature

- wind component
- flap position
- definition of aircraft moment
- derivation of aircraft data and calculation techniques related to aircraft performance, and load planning factors and considerations
- express terms of speed, including:
 - indicated airspeed (IAS)
 - mach number
 - designed dive speed
 - maximum operating speed
 - normal operating speed
- IATA load sheet information requirements and compilation, including:
 - flight number
 - aircraft registration
 - dry operating mass and dry operating CG
 - zero fuel mass
 - zero-fuel CG
 - launch mass CG (MAC %)
 - landing mass
 - landing mass CG (MAC %)
 - passenger distribution
 - deadload distribution – baggage, cargo and mail
 - details of dangerous goods (NOTOC)
 - details of live and perishable cargo
- IATA numbering scheme for cargo holds
- mass and balance calculations, including:
 - graphical
 - arithmetical
 - mass x arm = moment
 - total moments = arm of CG
 - use of automated systems
- maximum payload limitations, including:
 - volumetric, floor and loading limitations
 - ramp unload and reload limitations
 - CG
 - dangerous goods
 - differences between DOW and MZFW
 - passenger capacity
- meaning and calculation of take-off safety speed (V₂)
- operating mass definitions and application to load planning, including:

- BOW
- BOW + crew, crew bags, catering and spares = DOW
- DOW + payload/passenger load = ZFW
- DOW + take-off fuel = operating mass (OW)
- ZFW + payload/passenger load = take-off mass (TOW)
- TOW + taxi fuel = taxi mass
- TOW – fuel consumed en route = landing mass (LDW)
- TOW – take-off fuel = ZFW
- other terminology relevant to aircraft performance calculations not otherwise defined
- principles of balance control
- principles of mass control
- ramp mass or taxi mass, including
 - TOW
 - LDW.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIY0033 Operate aircraft using aircraft flight instruments

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to operate aircraft using aircraft flight instruments in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes establishing serviceability of flight instruments and instrument power sources, operating an aircraft using full instrument procedures and recovering from unusual attitudes using full instrument procedures. It also includes operating an aircraft using limited instrument procedures, recovering from unusual attitudes using limited instrument procedures, re-establishing visual flight and performing steep turns.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to aircraft operational duties that complement flight crew non-technical skills and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

Y – Aircraft Operation and Traffic Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Establish serviceability of flight instruments and instrument power sources

1.1 Serviceability of flight instrument, pitot/static system and instrument power sources is determined before flight

1.2 Functional checks of flight and navigational instruments are performed before departure

2 Operate aircraft using full instrument procedures

2.1 Flight instrument and instrument power sources are monitored and pilot cautions, warnings and indications reacted to in accordance with full instrument procedures

2.2 Power and attitude are set and maintained by reference to full instrument panel to achieve straight and level performance during normal cruise

2.3 Power and attitude are set and maintained by reference to full instrument panel to achieve nominated climb performance

2.4 Power and attitude are set and maintained by reference to full instrument panel to achieve nominated descent performance

2.5 Power, attitude and bank during climb, descent and straight and level flight are set and maintained by reference to full instrument panel to achieve rate one turns onto a nominated heading

2.6 Aircraft is balanced and trimmed to maintain nominated aircraft altitude, heading, speed and/or climb/descent performance within flight tolerances

2.7 Aircraft is levelled at nominated altitude, from climb or descent during straight or turning flight

3 Recover from unusual attitudes using full instrument procedures

3.1 Unusual attitudes and upset situations are recognised and identified

3.2 Controlled flight is resumed by reference to flight instruments using a full instrument panel

- 3.3** Straight and level attitude is achieved without excessive oscillations at the horizon
- 3.4** Aircraft is recovered to above lowest safe altitude (LSALT)
- 4 Operate aircraft using limited instrument procedures**
- 4.1** Flight instrument and instrument power sources are monitored and pilot cautions, warnings and indications reacted to in accordance with limited instrument procedures
- 4.2** Aircraft is transitioned from full instrument operating procedures to limited instrument operating procedures while maintaining safe flight profiles
- 4.3** Power and attitude are set and maintained by reference to limited instrument panel to achieve straight and level performance during normal cruise
- 4.4** Power and attitude are set and maintained by reference to limited instrument panel to achieve nominated climb performance
- 4.5** Power and attitude are set and maintained by reference to limited instrument panel to achieve nominated descent performance
- 4.6** Power, attitude and bank during climb, descent, straight and level flight are set and maintained by reference to limited instrument panel to achieve rate one turns onto a nominated heading
- 4.7** Aircraft is balanced and trimmed to maintain nominated aircraft altitude, heading, speed and/or climb/descent performance within flight tolerances
- 4.8** Aircraft is levelled at nominated altitude, from climb or descent during straight or turning flight
- 5 Recover from unusual attitudes using limited instrument procedures**
- 5.1** Unusual attitudes and upset situations are recognised and identified
- 5.2** Controlled flight is resumed by reference to flight instruments using a limited instrument panel
- 5.3** Straight and level attitude is achieved without excessive oscillations at the horizon

- 5.4 Aircraft is recovered to above LSALT
- 6 **Re-establish visual flight**
 - 6.1 Aircraft is transitioned from visual flight conditions to instrument flight conditions while aircraft control is maintained
 - 6.2 Aircraft is manoeuvred to re-establish visual flight
 - 6.3 Plan is implemented to ensure flight continues within visual meteorological conditions (VMC)
- 7 **Perform steep turns**
 - 7.1 Power, attitude and bank are set to maintain level flight by reference to full instrument panel that achieves a steep turn
 - 7.2 Nominated angle of bank is maintained
 - 7.3 Aircraft turn is exited onto nominated heading
 - 7.4 Aircraft is balanced and trimmed to maintain nominated aircraft altitude, heading, speed and/or climb/descent performance within flight tolerances

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIY0001 Operate aircraft using aircraft flight instruments.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIY0033 Operate aircraft using aircraft flight instruments

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures (SOPs)
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- compensating for secondary effects of controls
- completing relevant documentation
- controlling aircraft by reference to artificial horizon and gyro compass
- identifying and correctly using relevant equipment
- implementing contingency plans
- implementing work health and safety (WHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritising work
- maintaining compliance with regulatory requirements
- maintaining orientation under simulated instrument flight conditions
- modifying activities dependent on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- performing manoeuvres and procedures solely by use of instrument panel, including:
 - full instrument panel procedures
 - limited instrument panel procedures
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting or rectifying identified problems promptly by referring to instrument panel
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS standards
- setting local or area barometric pressure adjusted for sea level (QNH) at appropriate stages of flight

- using instrument scan techniques applicable to flight condition
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- anti-icing and de-icing controls and switches fitted to aircraft type
- attitude and power requirements to achieve specified flight profiles
- Civil Aviation Safety Regulation (CASR) Part 61 Manual of Standards (MOS) Schedule 3 Aeronautical Knowledge relevant to instrument flight operations
- flight instrument performance tolerances for instrument meteorological condition (IMC) flights
- functions and effects of all aircraft controls
- hazards that exist when controlling an aircraft by reference to instrument panel and related risk control processes
- human factors applicable to instrument panel operating procedures, including:
 - full instrument panel
 - limited instrument panel
- in a Defence context, relevant Defence Orders and Instructions
- instrument panel failure cautions, warning and indication systems and appropriate response techniques
- instrument panel scan techniques
- meteorological conditions impacting instrument flight procedures
- operation of flight instruments and pitot/static system
- operation, function and limitations of flight instruments and instrument power sources
- performance instrument indications and power requirements to achieve specified flight profiles
- pitot, airframe and carburettor icing and prevention/removal procedures
- principles of aerodynamics
- unusual aircraft attitudes
- problems that may occur when controlling an aircraft by reference to full instrument panel and action that should be taken in each case
- relevant sections of CASRs and Civil Aviation Orders
- relevant WHS and environmental procedures and regulations
- safety risks associated with application of large or rapid control inputs in more than one axis simultaneously
- scan techniques appropriate to fitted flight instruments and phase of flight, including:
 - with attitude and stabilised heading indicators
 - without attitude and stabilised heading indicators.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Performance must be assessed in one or more of the following:

- single engine aircraft
- multi-engine aircraft
- synthetic training device approved by appropriate authority
- fixed wing
- helicopter
- other commercial or military aircraft

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and PPE currently used in industry.

AVIY0034 Operate in controlled airspace

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to operate in controlled airspace in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes applying controlled airspace procedures, and applying abnormal and emergency situation response procedures.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to aircraft operational duties of flight crew and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

Y – Aircraft Operation and Traffic Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

1 Apply controlled airspace procedures

demonstrate achievement of the element.

- 1.1** Control area (CTA) and control zone (CTR) instructions for departure, climb, transition to cruise (levelling out), cruise, change of levels, descent and visual approach procedures are adhered to
- 1.2** Airways clearance requirements for entering, operating in and departing from CTA and CTR are adhered to
- 1.3** Adverse weather conditions affecting airways clearance maintenance are advised to appropriate air traffic services as required
- 1.4** Air traffic service requirements for a change in level within CTA during routine flight are adhered to
- 1.5** Class C, D and G navigational chart information is identified and interpreted for use within controlled airspace
- 1.6** Separation standards between instrument flight rule (IFR) flights, and IFR and visual flight rule (VFR) flights in various classes of CTA are confirmed and applied
- 1.7** Restricted and danger area separation requirements are identified and maintained
- 1.8** Class C, D and G radio and navigation aid frequencies are identified and used within controlled airspace
- 1.9** Aircraft IFR/VFR separation requirements are maintained
- 1.10** Aircraft altitude and tracking tolerances when operating on an airways clearance are maintained
- 1.11** CTA protection tolerances are maintained
- 1.12** Radar vectoring procedures, including radio procedures and phraseologies, are implemented as required through air traffic services instruction
- 1.13** Airways clearance requirements for operating in all classes of airspace, including lead time required for flight plan submission, contents, clearance void time, and 'read back' requirements, are complied with

2 Apply abnormal and

- 2.1** Aircraft is configured to maintain safe operating

**emergency situation
response procedures**

conditions within controlled airspace requirements during abnormal and emergency situations

- 2.2 Aircraft position and intention broadcasts are made to local and area traffic, including air traffic services
- 2.3 Appropriate radio communication failure or emergency transponder codes during abnormal or emergency situations are selected within CTA and CTR airspace
- 2.4 Air traffic service requirements for a change in level within CTA during abnormal or emergency situations are adhered to

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIY0002 Operate in controlled airspace.

Links

AVI Training Package Companion Volume Implementation Guide available on VET Net: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=4725260a-0af3-4daf-912b-ef1c2f3e5816>

Assessment Requirements for AVIY0034 Operate in controlled airspace

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adhering to air traffic services requirements for a change in level within control area (CTA), including emergency situations
- applying airways clearance requirements for entering, operating in and departing from CTA and control zone (CTR)
- applying relevant aeronautical knowledge
- complying with departure, climb, transition to cruise (levelling out), cruise, change of levels, descent and visual approach procedures in CTA and CTR instructions
- identifying controlled airspace separation requirements
- identifying danger area operating requirements
- obtaining and interpreting traffic information
- operating under radar vectoring procedures, including radio procedures and phraseologies
- performing appropriate actions in abnormal operations and emergencies
- performing appropriate actions radio communication in CTA and CTR is lost
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- recalling transponder emergency and communication failure codes
- reconfirming air traffic services instructions where doubt exists
- selecting appropriate aircraft lighting configuration
- setting appropriate radio communication failure or emergency transponder codes during abnormal or emergency situations
- setting local or area barometric pressure adjusted for sea level (QNH) at appropriate stages of flight
- transmitting appropriate aircraft position and intention broadcasts.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aerodrome ground markings and lighting

- air traffic services information requirements
- Civil Aviation Safety Regulation (CASR) Part 61 Manual of Standards (MOS) Schedule 3 Aeronautical Knowledge relevant to aeroplane or helicopter operations within controlled airspace
- Class C, D and G airspace operating requirements
- controlled airspace
- danger areas
- Notice to Airmen (NOTAM) information requirements
- radio failure procedures
- restricted airspace
- standard radio telecommunication phraseology
- transponder codes for Class C, D and G airspace
- visual flight rules (VFR)
- visual navigation charts (VNC).

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIY0035 Operate in Class G airspace

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to operate in Class G airspace in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes operating and navigating in uncontrolled airspace.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to aircraft operational duties of flight crew and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

Y – Aircraft Operation and Traffic Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | |
|--|------------|---|
| 1 Operate in uncontrolled airspace | 1.1 | Aircraft tracking tolerances are maintained to remain within Class G airspace |
| | 1.2 | Aircraft altitude tolerances are maintained to remain within Class G airspace |
| | 1.3 | Traffic separation tolerances between instrument flight rule (IFR) and visual flight rule (VFR) operations are maintained |
| | 1.4 | Abnormal and emergency situation response actions are implemented as required |
| 2 Navigate in uncontrolled airspace | 2.1 | Flight operations are conducted with appropriate separation from active aerodrome and landing areas |
| | 2.2 | Controlled and restricted airspace areas are identified and separation tolerances maintained during all phases of flight |
| | 2.3 | Appropriate flight operating procedures are applied in vicinity of danger areas |
| | 2.4 | Radio communication failure and aircraft emergency transponder codes are utilised as required |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to AVIY0003 Operate in Class G airspace.

Assessment Requirements for AVIY0035 Operate in Class G airspace

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- acquiring en route weather information and/or local observations
- applying relevant aeronautical knowledge
- displaying effective uncontrolled airspace situational awareness
- identifying and interpreting Class G navigational chart information
- identifying controlled airspace separation requirements
- identifying danger area operating requirements
- identifying relevant Class G radio and navigation aid frequencies
- identifying restricted area separation requirements
- maintaining aircraft altitude tolerances
- maintaining aircraft instrument flight rule (IFR)/visual flight rule (VFR) separation requirements
- maintaining aircraft tracking tolerances
- obtaining and interpreting traffic information
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- selecting appropriate aircraft lighting configuration
- setting appropriate radio communication failure or emergency transponder codes during abnormal or emergency situations
- setting local or area barometric pressure adjusted for sea level (QNH) at appropriate stages of flight
- transmitting appropriate aircraft position and intention broadcasts.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Civil Aviation Safety Regulation (CASR) Part 61 Manual of Standards (MOS) Schedule 3 Aeronautical Knowledge relevant to aeroplane or helicopter operations in Class G airspace
- class G airspace operating requirements

- controlled airspace
- danger areas
- IFRs
- radio failure procedures
- restricted airspace
- standard radio telecommunication phraseology
- transponder codes for Class G airspace
- VFRs
- visual navigation charts (VNC).

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment (PPE) currently used in industry.

AVIY0036 Operate at non-towered aerodromes

Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

Application

This unit involves the skills and knowledge required to operate at non-towered aerodromes in compliance with relevant regulatory requirements of the Civil Aviation Safety Authority (CASA) and national operating standards.

It includes conducting pre-flight preparations; taxiing aircraft; and applying aircraft departure, arrival and landing procedures.

This unit addresses aviation technical skill requirements (physical, mental and task-management abilities) related to aircraft operational duties that complement flight crew non-technical skills and contributes to safe and effective performance in complex aviation operational environments.

Operations are conducted as part of recreational, commercial and military aircraft activities across a variety of operational contexts within the Australian aviation industry.

Work is performed independently or under limited supervision within a single-pilot or multi-crew environment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Pre-requisite Unit

Not applicable.

Competency Field

Y – Aircraft Operation and Traffic Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

- | | |
|---|---|
| | demonstrate achievement of the element. |
| 1 Conduct pre-flight preparations | 1.1 Relevant non-towered aerodrome operational information is extracted from authorised sources |
| | 1.2 Information is interpreted to determine appropriate departure, arrival and landing requirements |
| | 1.3 Special aerodrome procedures are identified as required |
| | 1.4 Weather forecasts and local observations are checked for operating validity for flight planned duration |
| | 1.5 Relevant radio and navigation aid frequencies are identified for use during all flight modes |
| 2 Taxi aircraft at a non-towered aerodrome or landing area | 2.1 Non-towered aerodrome or landing area charts are used |
| | 2.2 Local or area barometric pressure adjusted for sea level (QNH) is set |
| | 2.3 Operating intentions are broadcast via radio telecommunications on appropriate frequency |
| | 2.4 Local and area traffic information is obtained and interpreted |
| | 2.5 Aircraft separation and lookout is maintained for other aircraft and for other aerodrome obstructions or hazards |
| | 2.6 Appropriate aircraft lighting is selected during aircraft taxi |
| | 2.7 Aerodrome ground markings are identified and appropriate action taken during aircraft taxi |
| | 2.8 Aircraft is taxied or air transited to runway holding point |
| 3 Perform aircraft departure | 3.1 Runway approaches are checked and cleared in all directions prior to entering runway |
| | 3.2 Aircraft transponder code and appropriate mode are selected |
| | 3.3 Aircraft position and operating intentions are broadcast on appropriate frequencies |
| | 3.4 Aircraft separation is maintained during aircraft |

- departure sequence
- 3.5** Air service provider is advised of departure details as required
