# UEENEEJ183A Design secondary refrigerant systems

Release: 1

### **UEENEEJ183A Design secondary refrigerant systems**

### **Modification History**

Not Applicable

### **Unit Descriptor**

#### Unit Descriptor

#### 1) 1.1) Descriptor

This unit covers the design of secondary refrigeration systems. It encompasses design skills including overall systems design, selection of components and definition of control logic.

### **Application of the Unit**

#### **Application of the Unit 4**)

This competency standard is suitable for employmentbased programs under an approved contract of training at the AQF level of the qualification in which the unit is first packaged or higher.

The unit may be selected as an elective from the relevant schedule (see qualification packaging rules) provided that all prerequisite units are undertaken or addressed through recognition processes.

This unit may be included in a skill set provided that it is listed in the schedule of electives (see Qualification Framework) and all prerequisite units are undertaken or addressed through recognition processes.

Delivery and assessment of this unit should be undertaken within regard to the requirements of License to Practice (1.2 above), Prerequisite Competencies and Literacy and Numeracy skills (2 above) and the recommendations for concurrent assessment and relationship with other units (9.5 below).

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships. Note:

1. Compliance with permits may be required in various

#### **Application of the Unit 4**)

jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation. 2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

### **Licensing/Regulatory Information**

#### 1.2) License to practice

The skills and knowledge described in this unit do not require a licence to practise in the work place. However practice in this unit is subject to regulations directly related to occupational health and safety, codes of work practice and standard work procedures related to the characteristics and behaviour of material in an engineering environment.

### **Pre-Requisites**

Prerequisite Unit(s) 2)

#### 2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed. UEENEEJ132A Design commercial refrigeration systems and select components UEENEEJ129A Establish heat loads for commercial refrigeration and/or air conditioning applications UEENEEJ165A: Evaluate thermodynamic and fluid parameters of refrigeration systems UEENEEJ127A Establish the thermodynamic parameters of refrigeration and air conditioning systems UEENEEJ164A Analyse the operation of HVAC air and hydronic systems UEENEEJ192A Analyse the psychrometric performance

### Prerequisite Unit(s)

2)	
of HVAC/R systems	
and	
UEENEEJ193A Analyse the thermodynamic	
performance of HVAC/R systems	
or UEENEEJ109A Verify functionality and compliance of	
refrigeration and air conditioning installations	
UEENEEE101A Apply Occupational Health and Safety	
regulations, codes and practices in the workplace	
UEENEEE102A Fabricate, assemble and dismantle	
utilities industry components UEENEEE003B Solve problems in extra-low voltage	
single path circuits	
UEENEEE105A Fix and secure electrotechnology	
equipment	
UEENEEE107A Use drawings, diagrams, schedules,	
standards, codes and specifications UEENEEE137A Document and apply measures to contro	1
OHS risks associated with electrotechnology work	
UEENEEJ102A Prepare and connect refrigerant tubing	
and fittings	
UEENEEJ103A Establish the basic operating conditions of vapour compression systems	
UEENEEJ104A Establish the basic operating conditions	
of air conditioning systems	
UEENEEJ106A Install refrigerant pipe work, flow	
controls and accessories	
UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment	
UEENEEJ108A Recover, pressure test, evacuate, charge	
and leak test refrigerants	
UEENEEJ110A Select refrigerant piping, accessories and	
associated controls UEENEEJ111A Diagnose and rectify faults in air	
conditioning and refrigeration systems and components	
UEENEEJ113A Commission air conditioning and	
refrigeration systems	
UEENEEJ153A Find and rectify faults motors and	
associated controls in refrigeration and air conditioning systems	
UEENEEJ170A Diagnose and rectify faults in air	
conditioning and refrigeration control systems	
UEENEEJ194A Solve problems in low voltage	
refrigeration circuits	
UEENEEP012A Disconnect / reconnect composite appliances connected to low voltage installation wiring	
-rr	

#### Prerequisite Unit(s)

UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures UEENEEP024A Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply UEENEEP025A Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500

Vd.c. supply

2)

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

### **Employability Skills Information**

Employability Skills	3)
	This unit contains Employability Skills
	The required outcomes described in this unit of
	competency contain applicable facets of Employability
	Skills. The Employability Skills Summary of the
	qualification in which this unit of competency is packaged
	will assist in identifying Employability Skill requirements.

### **Elements and Performance Criteria Pre-Content**

6) Elements describe the sesential outcomes of a unitmethod by the sesential outcomes of a unitmethod by the sesential outcomes of a performance achievement of the Element. Assessment of performance must be consistent with the evidence guide.

# **Elements and Performance Criteria**

ELEMENT		PERFORMANCE CRITERIA		
1	Prepare to design secondary refrigeration systems	1.1	OHS processes and procedures for a given work area are identified, obtained and understood.	
		1.2	The extent and nature of the refrigeration system is determined from design specifications.	

#### ELEMENT PERFORMANCE CRITERIA

- 1.3 Safety and other regulatory requirements to which the system shall comply are identified, obtained and understood.
- 1.4 Work supervisor or customers are consulted to determine which functions of the system are to be used and the parameter of each and written confirmation sought.
- 1.5 Design development work is planned to meet scheduled timelines in consultation with others involved on the work site.
- 2 Design secondary 2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
  - 2.2 Knowledge of secondary refrigeration system analysis, secondary refrigeration system components and piping, performance standards and compliance methods are applied to developing the system design.
  - 2.3 Safety, functional and budgetary considerations are incorporated in the installation designed.
  - 2.4 Equipment required for the system is selected in accordance with the design specifications and established requirements.
  - 2.5 Location of components of the system is documented to ensure correct operation of system functions.
  - 2.6 System design draft is checked for compliance with the design brief and regulatory requirements.
  - 2.7 System design is documented for submission to appropriate person(s) for approval.
  - 2.8 Solutions to unplanned situation are provided consistent with organisation's policy.

applications design

#### ELEMENT

3

Obtain approval for 3.1 S engineering computer c

#### **PERFORMANCE CRITERIA**

- 3.1 System design is presented and explained to client representative and/or other relevant person(s).
  - 3.2 Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation's policy.
  - 3.3 Final design is documented and approval obtained from appropriate person(s).
  - 3.4 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.

# **Required Skills and Knowledge**

### **REQUIRED SKILLS AND KNOWLEDGE**

**7**) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing multi-stage cascade and/or liquid recirculation secondary refrigeration systems. All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

KS01-EJ183A Secondary refrigeration system design

## **Evidence Guide**

#### **EVIDENCE GUIDE**

**9**) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

#### **Overview of** 9.1) Assessment Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy. Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed. The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment. Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

#### **EVIDENCE GUIDE**

Critical aspects of evidence required to demonstrate competency in this unit	<ul><li>9.2) Before the critical aspects of evidence are considered all prerequisites must be met.</li><li>Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence must also comprise:</li></ul>
	• A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
	• Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
	• Apply sustainable energy principles and practices as specified in the performance criteria and range statement
	• Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
	• Demonstrate an appropriate level of skills enabling

- Demonstrate an appropriate level of skills enabling
   employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
  - Design secondary refrigeration systems as described in 8) and including:
    - A Understanding required operating functions and parameters from the design specification
    - B Developing the design within the safety, regulatory and functional requirements and budget limitations
    - C Documenting and presenting design effectively

### **EVIDENCE GUIDE**

	D	Successfully negotiating design alteration requests			
	Е	Obtaining approval for final design			
	F	Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items			
Context of and specific resources for assessment	practice usir	ould be assessed as it relates to normal work ng procedures, information and resources typical of . This should include:			
	<ul> <li>OHS policy and work procedures and instructions.</li> <li>Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.</li> </ul>				
	These should environment Note:	d be part of the formal learning/assessment t.			
	Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.				
		es used for assessment should reflect current ctices in relation to designing secondary systems.			
Method of assessment	3 'Assessme Note: Competent p expected in assessment i primarily for equipment a	all be assessed by methods given in Volume 1, Part nt Guidelines'. Derformance with inherent safe working practices is the Industry to which this unit applies. This requires in a structured environment which is intended r learning/assessment and incorporates all necessary nd facilities for learners to develop and demonstrate knowledge and skills described in this unit.			
Concurrent	9.5)				
assessment and relationship with other units	There are no concurrent assessment recommendations for this unit.				

#### **EVIDENCE GUIDE**

The critical aspects of occupational health and safety covered in unit UEENEEE001B and other discipline specific occupational health and safety units shall be incorporated in relation to this unit..

### **Range Statement**

#### **RANGE STATEMENT**

**8**) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to designing at least two different (2 multistage cascade or 2 liquid recirculation or 1 multi-stage and 1 liquid recirculation) secondary refrigeration systems encompassing major components (i.e. heat exchanger, condenser, compressor, accumulator, and pump), associated components and controls.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

# **Unit Sector(s)**

Not Applicable

# **Competency Field**

#### 2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

### 2.2) Literacy and numeracy skills

**Competency Field** 5)

Refrigeration and Air Conditioning
